Table of Contents

SAFETY INSTRUCTIONS

This chapter contains important safety instructions that you must follow during operation and storage. Read the following before any operation to ensure your safety and to keep the instrument in the best possible condition.

Safety Symbols

These safety symbols may appear in this manual or on the instrument.

 WARNING	Warning: Identifies conditions or practices that could result in injury or loss of life.
 CAUTION	Caution: Identifies conditions or practices that could result in damage to the ASR-3000 or to other properties.
	DANGER High Voltage
	Attention Refer to the Manual
	Protective Conductor Terminal
	Earth (ground) Terminal

Do not dispose electronic equipment as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased.

Safety Guidelines

General Guideline

CAUTION

- Do not place any heavy object on the ASR-3000.
- Avoid severe impact or rough handling that leads to damaging the ASR-3000.
- Do not discharge static electricity to the ASR-3000.
- Use only mating connectors, not bare wires, for the terminals.
- Do not block the cooling fan opening.
- Do not disassemble the ASR-3000 unless you are qualified.
- If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.
- Due to the fact that ASR-3000 unit weights greater than 18kg, please resort to the standard kit GRA-442-E for transport or remove the unit by at least two persons in case of danger occurred.

Power Supply

WARNING

- AC Input voltage range:
  200 ~ 240 Vac
- Frequency: 47 ~ 63 Hz
- To avoid electrical shock connect the protective grounding conductor of the AC power cord to an earth ground.
- The power switch that is included in the instrument is not considered a disconnecting device.
- The permanently connected power input is used as the disconnecting device and shall remain readily operable.
  a. A switch or circuit-breaker must be included in the installation
  b. It must be suitably located and easily reached
  c. It must be marked as the disconnecting device for the equipment.
  d. It shall be located near the equipment
- Do not position the equipment so that it is difficult to operate the disconnecting device.
- Ask for professional technician for installation.
- It requires 200Vac input condition and the maximum input current [15A (ASR-3200), 22.5A (ASR-3300), 30A (ASR-3400/ASR-3400HF)], which conforms to cord diameter by local regulations.
- Breaker, of which the specification is required to larger than 20A (ASR-3200), 30A (ASR-3300), 40A (ASR-3400/ASR-3400HF) individually, should be in the near proximity of unit.
- For 208VAC three phase System, make sure as the follow
  1. L1 to L2 is 208Vac or 240Vac for three phase system.
  2. G is connected to *Earth Ground*.
  3. Do not connect the N to G.

Cleaning the ASR-3000	• Disconnect the circuit-breaker or permanently connected power input before cleaning. • Use a soft cloth dampened in a solution of mild detergent and water. Do not spray any liquid. • Do not use chemicals containing harsh material such as benzene, toluene, xylene, and acetone.
Operation Environment	• Location: Indoor, no direct sunlight, dust free, almost non-conductive pollution (Note below) • Relative Humidity: 20%~ 80%, no condensation • Altitude: < 2000m • Temperature: 0°C to 40°C (Pollution Degree) EN 61010-1:2010 specifies the pollution degrees and their requirements as follows. The ASR-3000 falls under degree 2. Pollution refers to "addition of foreign matter, solid, liquid, or gaseous (ionized gases), that may produce a reduction of dielectric strength or surface resistivity". • Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence. • Pollution degree 2: Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected. • Pollution degree 3: Conductive pollution occurs, or dry, non-conductive pollution occurs which becomes conductive due to condensation which is expected. In such conditions, equipment is normally protected against exposure to direct sunlight, precipitation, and full wind pressure, but neither temperature nor humidity is controlled.
Storage environment	• Location: Indoor • Temperature: -10°C to 70°C • Relative Humidity: ≤90%, no condensation
Disposal 	Do not dispose this instrument as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased. Please make sure discarded electrical waste is properly recycled to reduce environmental impact.

GETTING STARTED

This chapter describes the ASR-3000 power supply in a nutshell, including its main features and front / rear panel introduction.

ASR-3000 series

ASR-3000 Series Overview

Series lineup

The ASR-3000 series consists of 4 models, the ASR-3200, ASR-3300, ASR-3400 and ASR-3400HF, differing in capacity and out frequency. Note that throughout the user manual, the term "ASR-3000" refers to any of the models, unless stated otherwise.

Model Name	Power Rating	Max. Output Current	Max. Output Voltage
ASR-3200	2000 VA	20 / 10 A	400 Vrms / 570 Vdc
ASR-3300	3000 VA	30 / 15 A	400 Vrms / 570 Vdc
ASR-3400	4000 VA	40 / 20 A	400 Vrms / 570 Vdc
ASR-3400HF	4000 VA	40 / 20 A	400 Vrms / 570 Vdc

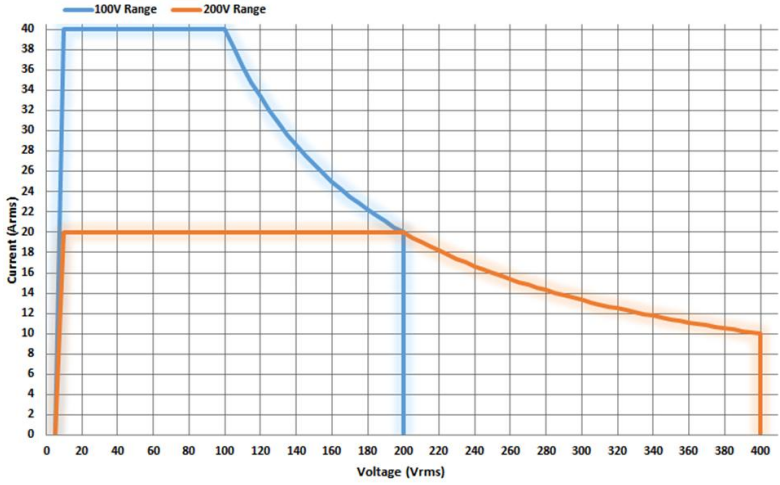
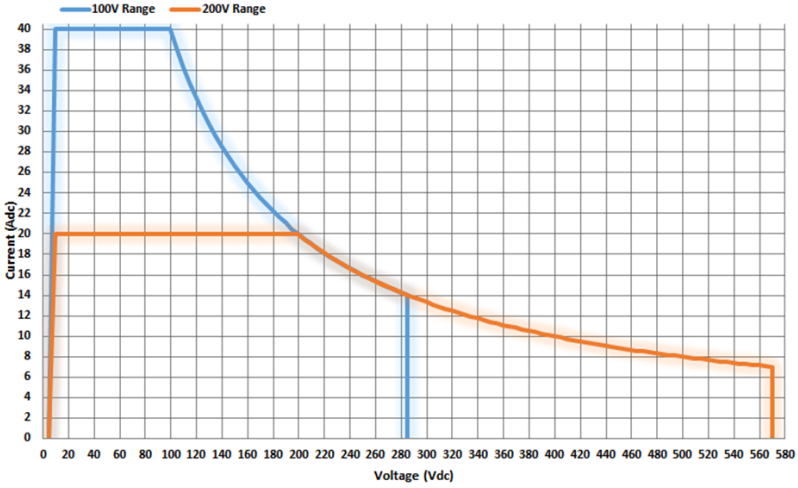
ASR-3400 and ASR-3400HF
AC Mode Output Operating Area



ASR-3400 and ASR-3400HF
DC Mode Output Operating Area



Main Features

Performance	• Maximum AC output voltage is 400 Vrms • Maximum DC output voltage is 570 Vdc • Maximum output frequency is 5000 Hz in AC mode • Supported AC+DC waveform application • DC full capacity output ability • Output voltage total harmonic distortion is less than 0.2% at 50 and 60 Hz • Maximum crest factor reached 6 times high
Features	• Include sine, square, triangle, arbitrary and DC output waveforms • Variable voltage, frequency and current limiter • Harmonic voltage and current analysis ability • Excellent and feature-rich measurement capacity • Sequence and simulate function • External input amplification • AC line synchronized output • Preset memory function • USB memory support • Remote sense • OCP, OPP and OTP protection function
Interface	• Built-in LAN, USB host, USB device, RS232 and GPIB interface • External control I/O • External signal input

Accessories

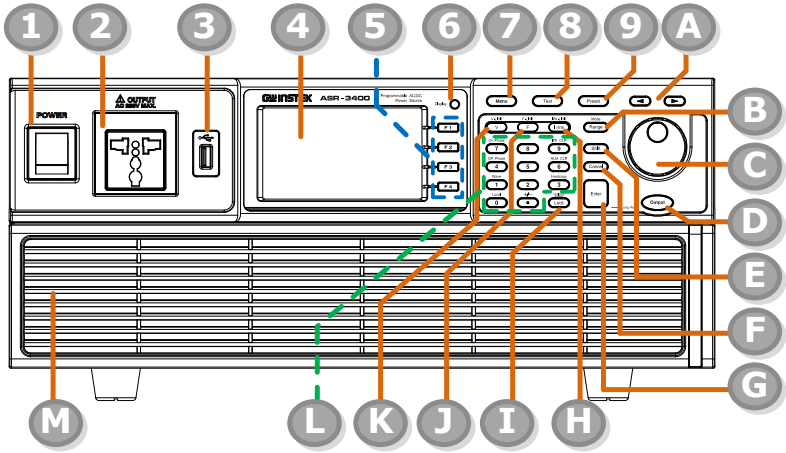
Before using the ASR-3000 power source unit, check the package contents to make sure all the standard accessories are included.

Standard Accessories	Part number	Description
	CD ROM	User manual, programming manual
	82GW1SAFE0M*1	Safety guide
	62SR-3K0SC101	Input terminal cover
	62SR-3K0SC201	Output terminal cover include remote sensing
	GRA-442-E	Rack mount adapter (EIA)
	GTL-246	USB CABLE (USB 2.0 Type A-Type B Cable, Approx. 1.2M)
Factory Installed Options	Part number	Description
	Optional 1	European Output Socket
Optional Accessories	Part number	De scription
	GPW-005	Power Cord SJT 10AWG/3C, 3m Max Length, 105°C, RNB5-8*3P, RNB3-4*3P UL/CSA Type
	GPW-006	Power Cord H05VV-F 1.5mm2/3C, 3m Max Length, 105°C, RNB1-5*3P, RNBL2-4*3P VDE Type (ASR-3200, ASR-3300 use only)
	GPW-007	Power Cord VCT 3.5mm2/3C, 3m Max Length, 105°C, RNB5-8*3P, RNB3-4*3P PSE Type

GPW-017	Power Cord H05VV-F 4.0mm2/3C, 3m Max Length, 105°C, RNB1-5*3P, RNBL2-4*3P VDE Type
GRA-442-J	Rack mount adapter (JIS)
GTL-137	Output power wire (Load wire_10AWG: 50A, 600V) (Sense wire_16AWG: 20A, 600V)
GTL-232	RS232C cable, approx. 2M
GTL-248	GPIB Cable, approx. 2M
ASR-002	External Three Phase Control Unit
APS-008	Air inlet filter
GET-006	Universal Extension

Appearance

Front Panel



Item Index	Description
1	Power switch button
2	Output Socket
3	USB interface connector (A Type)
4	LCD screen
5	Function keys (blue zone)
6	Display mode select key
7	Menu key
8	Test key
9	Preset key
A	Arrow keys
B	Range key/Output mode key
C	Scroll wheel

D	Output key
E	Shift key
F	Cancel key
G	Enter key
H	Irms/IPK-Limit button
I	Lock/Unlock button
J	F/F-Limit button
K	V/V-Limit button
L	Numerical Keypad with additional “Shift + key” shortcut functions (green zone)
M	Air inlet

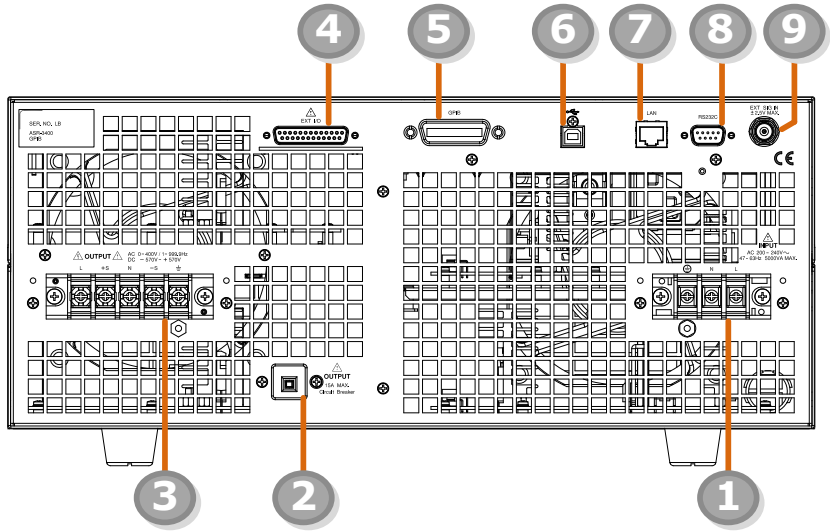
Item	Description	
Power Switch		Turn on the mains power
Output Socket		Output voltage socket, which has 2 versions in accordance with different regions: Universal and European types, in front panel.
USB A Port		The USB port is used for data transfers and upgrading software. Also, it is available for screenshot hardcopy in association with the Hardcopy key.
Note	It supports FAT32 format with maximum 32G storage only.	
LCD Screen		Displays the setting and measured values or menu system

Function Keys		Assigned to the functions displayed on the right side of the screen.
Display Mode Select Key		Selects between standard, simple and harmonic analysis mode.
Menu Key		Enters the Main menu or goes back to one of the display modes.
Test Key		Puts the instrument into the Sequence and Simulation control mode.
Preset Key		Puts the instrument into Preset mode.
Arrow Keys		The arrow keys are used to select the digit power of a value that is being edited.
Range Key		Switches between the 100V, 200V and AUTO ranges
Output Mode		Selects between the AC+DC-INT, AC-INT, DC-INT, AC+DC-EXT, AC-EXT, AC+DC-ADD, AC-ADD, AC+DC-Sync and AC-Sync modes.
Scroll Wheel		Used to navigate menu items or for increment/decrement values one step at a time.
Output Key		Turns the output on or off.

Shift Key		Turns on the shift state, which enables shortcut operations with an icon Shift indicated on the top status bar. The shift state, which allows continuous shortcut operations, is kept until another press on shift key again.
⚠ Note	When performing shortcut operations, press shift key followed by another shortcut function key. Do Not press both shift key and shortcut function key simultaneously.	
Cancel Key		Used to cancel function setting menus or dialogs.
Enter Key		Confirms selections and settings.
Irms		Used for setting the maximum output current.
IPK-Limit		Used to set the peak output current limit value.
Lock/Unlock Key		Used to lock or unlock the front panel keys except output key. Simply press to lock, whilst long press to unlock.
F		Used for setting the output frequency (DC mode N/A).
F-Limit		Used for setting the output frequency limit value (DC mode N/A).
V		Used for setting the output voltage.

V-Limit		Used for setting the output voltage limit value.
Keypad		Used to input power of a value directly. The ±/• key is used to input decimal / plus or minus.
On Phase		Sets the on phase for the output voltage.
Off Phase		Sets the off phase for the output voltage.
Output Waveform		Selects between the Sine, Square, Triangle and ARB 1~16 waveforms (not available for DC-INT, AC+DC-EXT and AC-EXT).
Local Mode		Switches operation back to local mode from remote mode.
IPK CLR		Used to clear peak output current value.
ALM CLR		Clears alarms.
Hardcopy Key		Used to take a screenshot. Make sure an USB flash disk in well inserted before the action.
Air Inlet		Air inlet for cooling the inside of the ASR-3000 series.

Rear Panel



Item Index	Description
1	Line input terminal
2	Front panel output socket circuit breaker
3	Output terminal with remote sensing input terminal
4	External I/O connector
5	GPIB connector
6	USB interface connector (B Type)
7	Ethernet (LAN) connector
8	RS232 connector
9	External signal input/ External synchronized signal input

Item	Description	
AC Power Input terminal		AC inlet (M4 screw type, 8 ~ 22 AWG)
Circuit Breaker		When front panel output socket output current reaches 15A, the circuit breaker will be activated automatically to cut off output. Press the button to reset the function.
Output Terminal with Remote Sensing Input terminal		L, N, ⏚ : Output voltage terminal (M4 screw type, 8 ~ 22 AWG) +S, -S: Remote sensing input terminal is for compensation of load wire voltage drop.
External Control I/O Connector		Used to control ASR-3000 externally by using the logic signal and monitor Sequence function status.
GPIB Connector		The GPIB connector for controlling the ASR-3000 remotely.
USB		USB port for controlling the ASR-3000 remotely.
Ethernet Port		The Ethernet port is used for remote control.
RS232C Connector		The RS232C connector for controlling the ASR-3000 remotely.

External Signal Input Connector		Synchronizing the output frequency with this external input signal for SYNC or outputting the amplified external signal with this external input signal for EXT and ADD.

Status Bar Icons

OFF / ON	Indicates if the output is ON or OFF.
100%	Indicates the output power as a percentage of full scale.
100V	Indicates if the output range is 100V, 200V or AUTO.
SIN	Indicates if the output waveform is Sine, Square, Triangle or ARB 1 - 16.
ALM	The alarm icon will appear on the status bar when one of the protection functions is tripped.
Shift	Indicates the shift key is pressed which enables shortcut operations with each key.
RMT	Indicates that the ASR-3000 is under remote mode.
SENS	Indicates that the Remote Sense function is active.
	Indicates that a USB flash drive is detected in the front panel host port.
LAN	Indicates that the LAN interface is activated.
	Indicates that the front panel lock is active.

Theory of Operation

The theory of operation chapter describes the basic principles of operation, protection modes and important considerations that must be taken into account before use.

Description of ASR-3000 System

System block are composed of the parts described below.

▪ Input EMI Filter and PFC Circuit	A two stage π filter and a passive PFC circuit that convert AC power to DC power.
▪ Auxiliary Power	It converts AC power line input to +24Vdc power for the PWM ICs, fan, among other devices.
▪ Isolation DC to DC Converter	The isolation DC to DC converter is able to convert high DC level to lower that not only offers inverter a stable DC source but separates primary and secondary side efficiently.
▪ Output Power Stage (inverter)	Two inverter power stages are in parallel or in series that provide, in addition to AC and DC output, sinusoid, square as well as triangle output waveforms.
▪ Digital Processor and Close Loop Control Circuit	Composition of the C2000 DSP device and the closed-loop control circuit that execute inverter action, output measurement and all of the relevant protection functions.
▪ Communication Interface and Data Transmission	DSP, FPGA and LCD controller that are collectively responsible for interface communication, data transmission, LED panel control as well as remote control.
▪ Keypad and Display	CPLD that controls keys action and communicates with DSP for data transmission.

Glossary

Rate Output Maximum Power Capacity	The maximum value of the output power capacity will be provided consecutively when the following situations exist: Output voltage is 100 to 200 V within the 100 V range. Output voltage is 200 to 400 V within the 200 V range. Output frequency is 40 to 5000 Hz in AC mode. Output frequency is 1 to 5000 Hz in AC+DC mode. Output voltage is 100 to 285 V within the 100 V range in DC mode. Output voltage is 200 to 570 V within the 200 V range in DC mode.
Rate Maximum Current	The maximum value of the output current (rms value) will be provided consecutively when the following situations exist: Output voltage is 100 V within the 100 V range. Output voltage is 200 V within the 200 V range. Output frequency is 40 to 5000 Hz in AC mode. Output frequency is 1 to 5000 Hz in AC+DC mode. Output voltage is 100 V within the 100 V range in DC mode. Output voltage is 200 V within the 200 V range in DC mode.

⚠ Note — The maximum capacity and current in DC mode is equal to AC+ DC and AC mode.

Equation:

$$Rated\ Max.current = \frac{Rate\ power\ capacity(VA,W)}{Output\ voltage}$$

Maximum Peak Current (AC-INT mode only)

The maximum value of the output current (peak value) will be provided consecutively to a capacitor input-type rectifying load when the following situations exist:

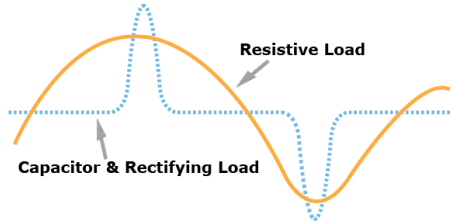
Output voltage is 100 to 200 V within the 100 V range.

Output voltage is 200 to 400 V within the 200 V range.

Output frequency is 40 to 5000 Hz in AC mode, and 1 to 5000 Hz in AC+DC mode.

Note

Rated maximum current (rms value) x 6 is equal to maximum peak current



Power Factor (PF)

The power factor, which stands for a ratio of the active power correlated to the apparent power, indicates degradation level within efficiency that results from the phase difference between AC current and AC voltage.

Equation:

$$Power\ factor = \frac{Active\ Power}{Apparent\ Power}$$

Crest Factor (CF)	The crest factor stands for a ratio of the rms value correlated to the peak value (crest value) of the waveform. Equation: $$Crest\ factor = \frac{Peak\ value}{RMS\ value}$$
⚠ Note	The crest factor is 1.41 of sine wave.
Inrush Current Capacity	It indicates the current, which is able to be supplied to a load, exceeds the rating for a short period and the duration.
Output Power Ratio	It indicates the output power of a percentage where the rated maximum output power is 100%.

Alarms

The ASR-3000 series have a number of protection features. When one of the protection alarms is tripped, the ALM icon on the display will be lit and the type of alarm that has been tripped will be shown on the display. When an alarm has been tripped the output will be automatically turned off. For details on how to clear an alarm or to set the protection modes, please see page 214.

Abnormal Output	This alarm is activated and output will be disabled immediately when output overvoltage or overcurrent is detected.
Abnormal Power Source Block	This alarm is activated and output will be disabled immediately when internal power source abnormality is detected. Beware that all operations will be disabled except for the power shutdown operation if an error occurs.
Abnormal Internal Control	This alarm is activated and output will be disabled immediately when internal control abnormality is detected. Beware that all operations will be disabled except for the power shutdown operation if an error occurs.
V-Limit	Voltage limit protection prevents a high voltage from damaging the DUT. This alarm can be set by the user.
F-Limit	Frequency limit protection prevents a high frequency from damaging the DUT. This alarm can be set by the user.
OCP	Over current protection prevents high current from damaging the DUT. This alarm can be set by the user.
OTP	Over temperature protection for power stage board. OTP is a hardware protection function. Only when the unit has cooled can the over temperature protection alarms be cleared.

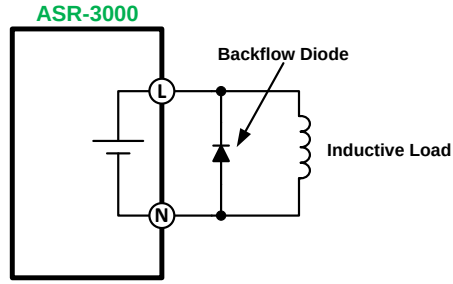
OPP	Over Power protection for power stage board. OPP is a software protection function that is corresponded with VA value. When the unit has loaded less then protection point that the alarm be cleared.
Remote Sense Error	Sense alarm. This alarm will detect if the sense wires have been connected to the wrong polarity.
Power Input Anomaly	AC input failure. This alarm function is activated when a low AC input is detected.
FAN Fail	Fan failure. This alarm function is activated when the fan RPMs drop to an abnormally low level.
PFC Error	This alarm function is activated when insufficient output voltage and over temperature occur in PFC power stage. This alarm can be set by user.
DCDC Error	This alarm function is activated when over output voltage or insufficient voltage and over current occur in DCDC power stage. Contact local dealer or GW Instek directly for repair.
DCAC Error	This alarm function is activated when transient output current larger than hardware protection point and over temperature occur in DCAC power stage. This alarm can be set by user.

Considerations

The following situations should be taken into consideration when using the power supply.

Inrush Current	When the power supply switch is first turned on, an inrush current is generated. Ensure there is enough power available for the power supply when first turned on, especially if a number of units are turned on at the same time.
Capacitive Load	When the power supply connects to a capacitive load, e.g., capacitor, the load is being charged consecutively and the larger the voltage change, the more the current grow. Also, the overshoot will be possibly generated within the currents output, therefore leading to output turned off thanks to overcurrent protection from the power supply. It is suggested to lower down the set voltage output from power supply so that the voltage of capacitive load decreases per certain unit time. In addition, a block diode is necessary to keep current from flowing back to the output terminal of power supply. Refer to the figure below where a block diode connects with the capacitive load in series to efficiently prevent current from flowing back to the power supply. 
Inductive Load

When the power supply connects to an inductive load, e.g., inductor, which generates a back EMF (Electromotive Force) when output current is accidentally turned off, a backflow diode is necessary for absorbing the back EMF, which may cause irreversible damage to the power supply. Refer to the following figure where a backflow diode connects with the inductive load in parallel to effectively absorb the possible back EMF.



CAUTION

Ensure the connected diode meets the following specifications between the load, either capacitor or inductor, and the ASR-3000 series power supplies.

- ✓ Maximum reverse voltage: 600 V or higher
- ✓ Maximum forward current:
  - ➢ ASR-3200: 20 A or more for 100V range, and 10 A or more for 200V range
  - ➢ ASR-3300: 30 A or more for 100V range, and 15 A or more for 200V range
  - ➢ ASR-3400 and ASR-3400HF: 40 A or more for 100V range, and 20 A or more for 200V range

Grounding

The output terminals of the ASR-3000 series are isolated with respect to the protective grounding terminal. The insulation capacity of the load, the load cables and other connected devices must be taken into consideration when connected to the protective ground or when floating.

Grounded Neutral Output	Basically, grounded return on the neutral output is allowed for ASR-3000 series and electric shock may occur if not following the grounding procedure based on the local electrical safety codes. In some cases, 0 V is specifically required between ground and neutral, which can substantially moderate ground loops, thus keeping sensitive equipment from effects of ground loops and reducing ground noise.
Ground & Neutral Shortcut Illustration	⚠ CAUTION	Owning to the fact that the neutral has been shortcut with the ground which is referenced to the chassis ground, few electric shocks may still take place from time to time, for which we sincerely ask your additional attention.

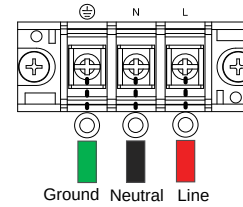
OPERATION

Set Up

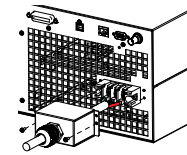
Power Up

Steps

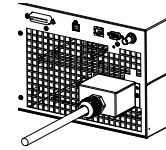
1. Connect the AC power cords to the AC input terminals.
   - Red → Line (L)
   - Black → Neutral (N)
   - Green → GND (⏚)



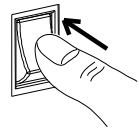
2. Install the power cord cover followed by fastening the two screws to fix the cover.



3. The AC power cords are perfectly connected with the AC input terminals.



4. Press the *POWER* key. The splash screen will appear momentarily before the continuous mode screen appears with the settings loaded.



CAUTION The power supply takes around 20 seconds to fully turn on and shutdown.
Do not turn the power on and off quickly.

Note The diameter range of power cable is 10.2 ~ 14.1mm.

How to Use the Instrument

Background

The ASR-3000 AC power supplies generally use the *scroll wheel*, *Arrow* keys, *Numerical Keypad* and *Enter* keys to edit numerical values or to select menu options.

Menu navigation is performed using the menu keys and function keys on the front panel.

The following section will explain some of these concepts in detail.

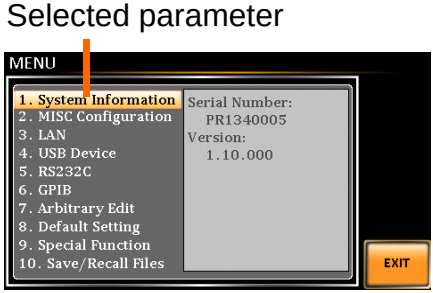
Selecting Menu Items

1. Turn the scroll wheel to select parameters in menus and lists. The selected parameter will be highlighted in orange. The scroll wheel is also used to increment/decrement setting values.

2. Press the *Enter* key to edit the parameter or to enter the selected menu.

Example

The following is an example of the menu list that appears when the Menu key is pressed.

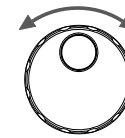


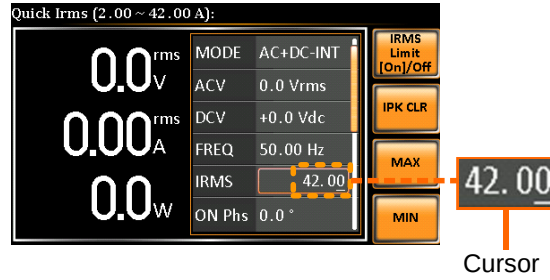
Using the Arrow Keys and Scroll Wheel to Edit Parameter Values

Use the *Arrow* keys to select a digit power and then use the scroll wheel to edit the value by that power.

1. Use the *Arrow* keys to move the cursor to the digit of the desired value.

2. Turn the scroll wheel to edit the value by the resolution of the selected digit.





3. Repeat the steps above for all the relevant digits.

4. Press the *Enter* key to confirm the edit.

Note

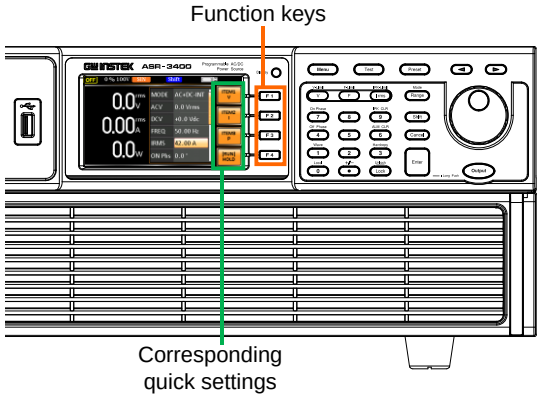
By default the cursor starts at the lowest digit of value.

Using the Function Keys

The function keys are quick settings keys, the function of which depends on the current menu or operation.

1. Press the *Function* key that corresponds to the setting directly to its left side.

2. The setting or parameter is immediately executed.



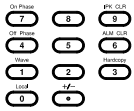
3. Repeat the steps above for all the relevant digits.

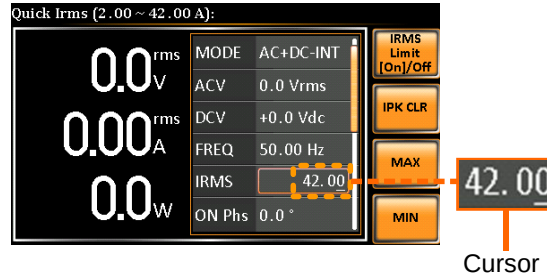
Using the Numerical Keypad to Edit Parameter Values

Use the *Arrow* keys to select a digit power and the *Numerical keypad* to define a power value.

1. Use the *Arrow* keys to move the cursor to the digit of the desired value.

2. Press the *Numerical keys* to input the value by the resolution of the selected digit.





3. Repeat the steps above for all the relevant digits.

4. Press the *Enter* key to confirm the edit. Enter

Note: By default the cursor starts at the lowest digit of value.

Output Terminals

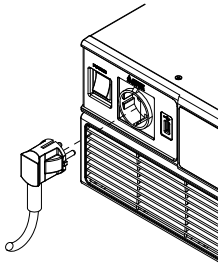
Background	The output terminals can be output from either the front panel or from the rear panel. When DC-INT mode or 200V range is selected, it is Not available to output power from the front panel. If the AUTO range is selected and the output voltage is under 200V range. The front panel output will not available, too
Supported Plugs	Multi-region terminal socket Supported standards IEC, North America, Japan. EURO CEE type universal plug

WARNING: Dangerous voltages. Ensure that the power to the instrument is disabled before handling the power supply output terminals. Failing to do so may lead to electric shock.

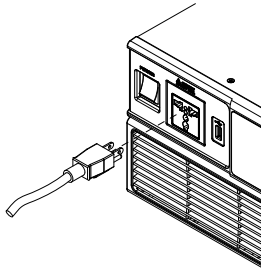
⚠ CAUTION	For the front panel output, the maximum output voltage is 200 VAC and current is 15 A.

Front Panel Output Connection

1. The front panel has a multi-region power socket depending on the socket type.
2. Insert the plug from the DUT into the socket.



EURO CEE socket



IEC North America, Japan

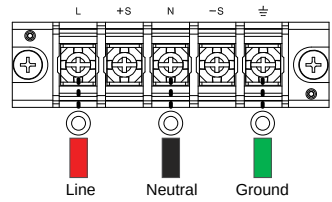
⚠ WARNING	Dangerous voltages. Ensure output is off before unplugging the plug from the front panel socket.

3. Turn the power on. The AC power supply is now ready to power the DUT.

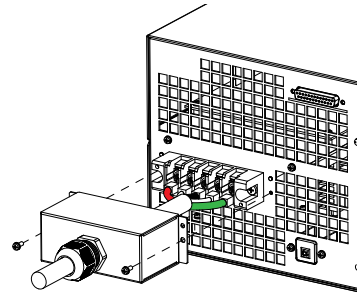
Rear Panel Output Connection

The rear panel output is used to supply higher power DUTs.

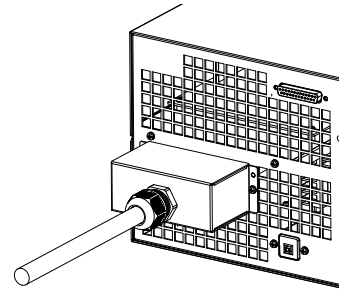
1. Disconnect the unit from the mains power socket and turn the power switch off.
2. Connect the output AC power wires to the AC output terminals.
   - Red → Line (L)
   - Black → Neutral (N)
   - Green → GND (⏚)



3. Install the output AC power wires cover followed by fastening the two screws to fix the wires cover.



4. The output AC power wires are perfectly connected with the AC output terminals.



5. Turn the power on. The AC power supply is now ready to power the DUT.

Note

Grounded Neutral Output:
ASR-3000 allows for a grounded return on the neutral output. It is suit for the medical industry that required between ground with neutral is 0 V essentially.
And possible to mitigate ground loops that is ideal for reduce ground noise and isolate sensitive equipment from the effects of ground loops.
The diameter range of output load cable is 10.2 ~ 14.1mm.

WARNING

Because the neutral has been referenced to the chassis ground, be careful electric shock by yourself.

Using the Rack Mount Kit

Background

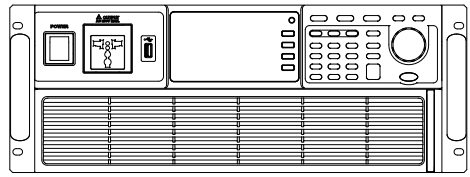
The ASR-3000 has the following optional Rack Mount kits, respectively.

Unit Model	Rack Mount kit part number
ASR-3200 ASR-3300	GRA-442-E
ASR-3400 ASR-3400HF	GRA-442-J

The GRA-442-E is designed to fit into an EIA rack of 4U-height, while the GRA-442-J is designed to fit into a JIS rack of 4U-height. Please see your distributor for further rack mount details.

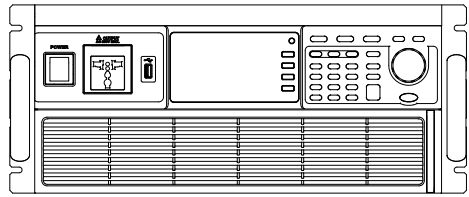
GRA-442-E Series

GRA-439-E Rack Mount with ASR-3000 Diagram



GRA-442-J Series

GRA-439-J Rack Mount with ASR-3000 Diagram



CAUTION

Ensure adequate ventilation is provided when using the rack mount. Ensure that a gap is given for air intakes. Failure to do so may cause the instrument to overheat.

Edit Arbitrary Waveform

Background

The arbitrary waveform editing function is to select built-in arbitrary waveforms. There are a number of built-in waveform shapes to choose from, each of which can be customized with varied attributes. Finally, choose an ARB NO. (1~16) to output the selected built-in waveform.

Steps

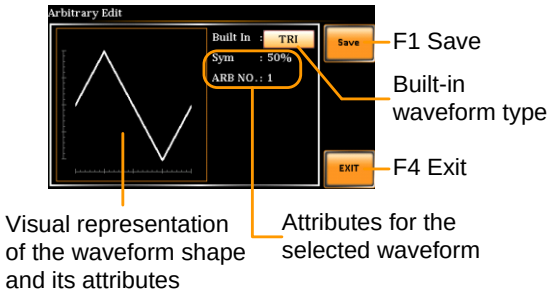
1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 7, *Arbitrary Edit* and press *Enter* to enter the Arbitrary Edit page.

Built-in Waveform	TRI, STAIR, CLIP, CF-1, CF-2, SURGE, DST01-22

3. Use the scroll wheel and *Enter* key to select waveform along with pertaining attributes and press *Save* to confirm settings.

Setting Screen Overview



ARB Waveform Overview

The following describes each of the built-in waveforms.

TRI	The triangle waveform has a settable number of percentage. Attributes: Sym: 0 ~ 100% ARB NO: 1 ~ 16 STAIR	The staircase waveform has a settable number of step levels. Attributes: Stairs: 1 ~ 100 ARB NO: 1 ~ 16 CLIP	Outputs a clipped sinewave. The degree to which the sine wave is clipped is settable. Attributes: Ratio: 0.00 ~ 1.00 ARB NO: 1 ~ 16 
CF-1	Crest factor (CF-1) waveform. The crest factor is settable. Attributes: CF: 1.1 ~ 10.0 ARB NO: 1 ~ 16 CF-2	Crest factor (CF-2) waveform. The crest factor is settable. Attributes: CF: 1.5 ~ 2.0 ARB NO: 1 ~ 16 SURGE	The surge waveform has a settable ACV base level, site size and site shape. Attributes: Type: SQU, SIN (site waveform type) ACV: 0 ~ 100% (base waveform ampl.) Site: 0 ~ 100% (site waveform width) ARB NO: 1 ~ 16 
DST01-22	The DST01-22 waveform shape function simply adds a number Fourier series terms to create an arbitrary waveform. Attributes: Type: 1 ~ 22 (Number of selectable ARB waveforms) ARB NO: 1 ~ 16 RIPPLE	The RIPPLE waveform shape function has a settable DC ripple attributes. Attributes: Times: 1/2/3/6 VDC: 1~100 Level: 1%~30% ARB NO: 1 ~ 16 
	DIP (ASR-3400HF only)	The DIP waveform refers to a transient reduction in RMS voltage, also known as Voltage Dip or "Drop In Point". Refer to following for the suggested range. Attributes: ST Phs:0.1~53.9 SP Phs:45.1~171.9 End Phs: 54.1~359.9 ARB NO: 1~16 	LF-RING (ASR-3400HF only)	The LF-RING waveform shape function is used to simulate a low-frenquency and sinusoidal waveform, which is smooth, continuous and resembles a shape of ring. Attributes: ACV: 0.0~400.0Vrms Amp: 140~200% Base_Freq: 50.0~200.0Hz Ring_Freq: 200.0~5000.0Hz Decay: -0.100~0.100 ST Phs: 0.1~119.9 End Phs: 60.1~359.9 Ring Phs: 0.1~359.9 ARB NO: 1~16 
Save	4. Press *Save[F1]* to save the Arbitrary Edit settings.	
Exit	5. Press *Exit[F4]* to exit from the Arbitrary Edit settings.	

Reset to Factory Default Settings

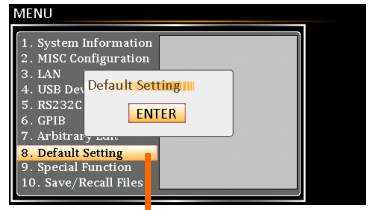
Background	The default settings can be restored from the Menu key settings. See page 209 for the default factory settings.

Steps

1. Press the *Menu* key. The Menu settings will appear on the display. 

2. Use the scroll wheel to go to item 8, *Default Setting*.

3. Press *Enter* for 2 times to restore the unit back to the default settings.



Default settings

View Firmware Version and Serial Number

Background	The Menu>System Information setting displays the serial number and firmware version.

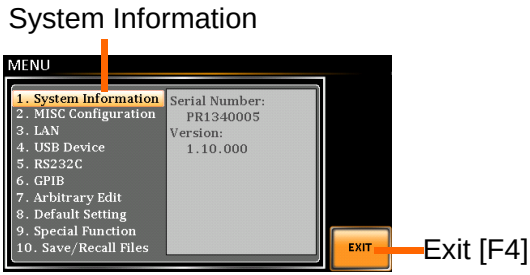
Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. The system information should now be listed in the item 1, System Information, on the display

Exit

3. Press *Exit[F4]* to exit from the Menu settings.



USB Driver Installation

Background	If the USB Type B interface is to be used for remote control, the USB driver needs to be installed.
⚠ Note	The USB driver, both gw_asr.inf and gw_asr.cat can be downloaded from the GW Instek website. For information on the USB interface, see page 188.

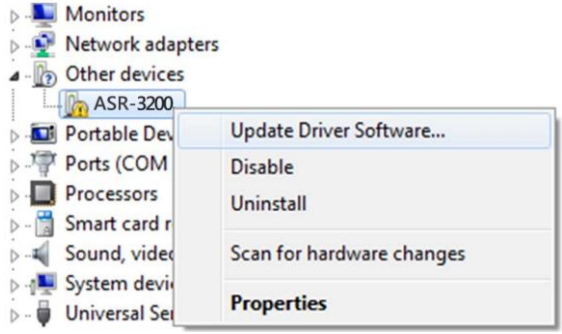
Steps

1. Connect the rear panel USB -B port on the ASR-3000 to the PC using a USB Type A to B cable.
2. Go the Windows Device Manager.

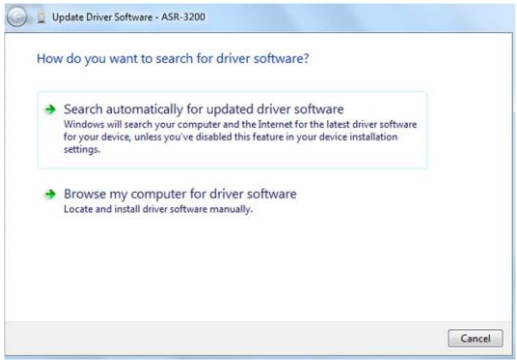
   For Windows 7:
   Start > Control Panel > Hardware and Sound > Device Manager

⚠ Note It is available for Windows 7 and Windows 10.

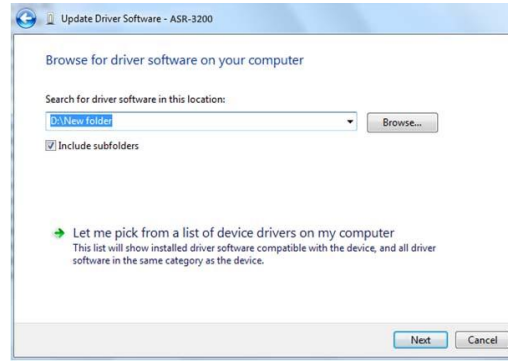
3. The ASR-3000 will be located under *Other Devices* in the hardware tree. Right-click the *ASR-3XXX* and choose *Update Driver Software*.



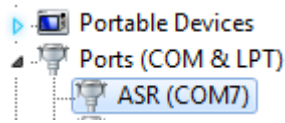
4. From the hardware wizard choose *Browse my computer driver software*.



5. Set the file path to the location of the USB driver, click Next and finish the driver installation.



6. ASR-3000 will now be located in the *Ports* node of the hardware tree in the Windows Device Manager if the driver installation was successful.

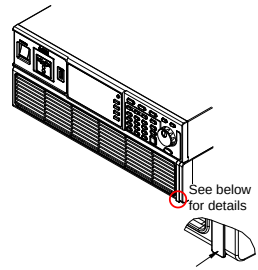


Filter Installation

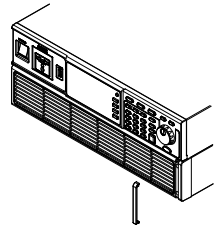
Background	The ASR-3000 has a filter (GW Instek part number, APS-008) that must first be inserted under the control panel before operation.

Steps

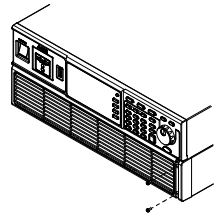
7. Pull outward as indicated in the arrow to detach the snap.



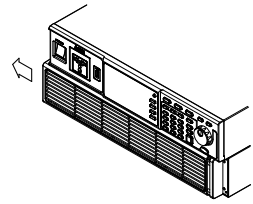
8. Remove th e cover



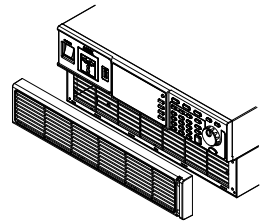
9. Remove the screws



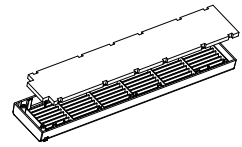
10. Move the plastic frame in the direction indicated by the arrow



11. Remove the plastic frame.



12. Replace the filter with a new one.



13. The unit is now ready to power up.

Note

Please clean regularly to avoid damaging the internal components of the machine

Warning

The following procedure should only be attempted by competent persons.

Ensure the AC power cord is not connected to power.

Wire Gauge Considerations

Background

Before connecting the output terminals to a load, the wire gauge of the cables should be considered.

It is essential that the current capacity of the load cables is adequate. The rating of the cables must equal or exceed the maximum current rated output of the instrument.

Recommended Wire Gauge

Wire Gauge	Nominal Cross Section	Maximum Current
20	0.5	9
18	0.75	11
18	1	13
16	1.5	18
14	2.5	24
12	4	34
10	6	45
8	10	64
6	16	88
4	25	120
2	32	145
1	50	190
00	70	240
000	95	290
0000	120	340

The maximum temperature rise can only be 60 degrees above the ambient temperature. The ambient temperature must be less than 30 degrees.

To minimize noise pickup or radiation, the load wires and remote sense wires should be twisted-pairs of the shortest possible length. Shielding of the sense leads may be necessary in high noise environments. Where shielding is used, connect the shield to the chassis via the rear panel ground screw. Even if noise is not a concern, the load and remote sense wires should be twisted-pairs to reduce coupling, which might impact the stability of the power supply. The sense leads should be separated from the power leads.

Menu Tree

Convention

Use the menu trees as a handy reference for the power supply functions and properties. The ASR-3200 / ASR-3300 / ASR-3400 / ASR-3400HF menu system is arranged in a hierarchical tree. Each hierarchical level, which is coated in varied colors, can be navigated through the orders within the diagrams below.

For example: To set the interface to Buzzer OFF;

① Press the *Menu* key.

② Navigate to the MISC Configuration option.

③ Enter the Buzzer option.

④ Select OFF.

Basic Operation

This section describes the basic operations required to operate the power supply.

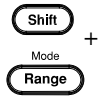
Before operating the power supply, please see the Getting Started chapter, page 9.

Select the Output Mode

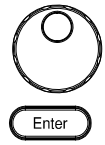
Background	The ASR-3000 has up to 9 modes to output, which empower user to have multiple applications for different scenarios.

Steps

1. Press *Shift* + *Range* to access the MODE selection menu.



Alternatively, it is available to use scroll wheel followed by the Enter key to enter the MODE menu.



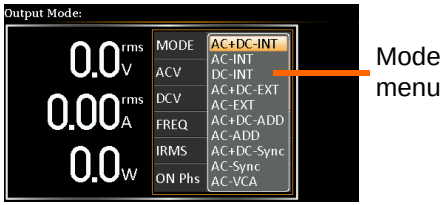
2. Choose an output mode with scroll wheel.

Mode	Description
AC+DC-INT	AC & DC Internal Output
AC-INT	AC Internal Output
DC-INT	DC Internal Output
AC+DC-EXT	AC & DC External Output
AC-EXT	AC External Output
AC+DC-ADD	AC & DC Additional Output
AC-ADD	AC Additional Output
AC+DC-Sync	AC & DC Synchronal Output
AC-Sync	AC Synchronal Output
AC-VCA	AC Voltage Control Amplifier Output
INT	The signal source is from internal. Set the output voltage, waveform, frequency, on phase and off phase through the control panel or the remote control.
EXT	The signal source is from external. Amplifies and outputs the external input signal. Set the voltage gain through the control panel or the remote control.
ADD	The signals are the total of the external and internal signal source. Set the voltage gain for the external input signal, the output voltage for the internal signal source, the output waveform, frequency, on phase and off phase through the control panel or the remote control.

Sync	The signal source is from internal. The output frequency is synchronized with the external TTL input signal or the power line. This frequency setting can't be set through the control panel or the remote control. All of setting conditions except for output frequency are as same as INT mode.
VCA	The output voltage can be controlled with the external DC 0~2.5V input signal via BNC terminal. The output voltage setting can't be set through the panel or remote control. All conditions except for output voltage setting is same as INT mode.

3. Press *Enter* to confirm the mode selection.

Example



Select the Voltage Range

Background

The Range setting determines the general outlet voltage range. The ranges available correspond to common mains output voltage standards.

Steps

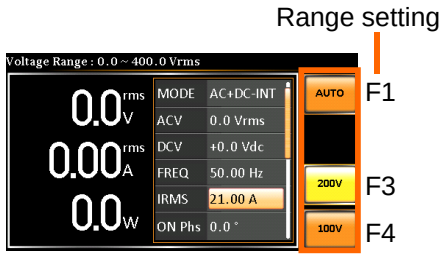
1. Press *Range* to access the Range menu.

2. Set the voltage range with the F1 ~ F4 soft-keys.

Soft-keys	F1: AUTO
	F3: 200V
	F4: 100V

3. Press *Enter* to confirm the Range setting.

Example



Note

The output voltage values set by user can be divided into 2 manual settings, both of which have close relation with voltage range that contains high range (200V, AUTO) and low range (100V). For instance, when setting 5 Vrms under 200V range and 3 Vrms under 100V range, the Vrms setting will change from 5 Vrms to 3 Vrms directly after switching the voltage range from 200V to 100V.

Also, if the voltage range is changed when the output is on, the output will be automatically turned off.

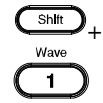
Select the Output Waveform

Background

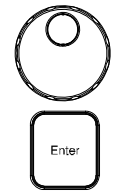
The ASR-3000 is capable of outputting sine, square, triangle and ARB wave shapes while connecting with external signals.

Steps

1. Press *Shift* + *1* to access the Wave menu.



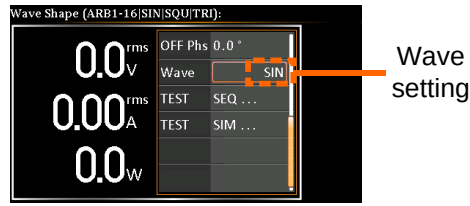
Alternatively, it is available to use scroll wheel followed by the Enter key to enter the Wave menu.



2. Choose a waveform with scroll wheel.

Mode	Description
SIN	Sine wave
SQU	Square wave
TRI	Triangle wave
ARB 1 ~ 16	Arbitrary wave 1 ~ 16

3. Press *Enter* to confirm the waveform setting.



Note

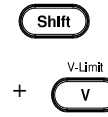
- Waveform selection is Not available under DC-INT, AC+DC-EXT and AC-EXT output modes.
- For more details about Arbitrary waveforms, refer to the page 118.
- When changing to a waveform with setting higher than the upper limit of other waveform, the setting of other waveform will be adjusted to zero forcibly. For instance, when it is originally SIN output with ACV in 150 Vrms (200 Vrms for V-Limit), the ACV will be changed to 0 Vrms (164.5 Vrms for V-Limit) after output waveform adjusts to TRI.

Setting the Output Voltage Limit

Background	Setting the voltage limit allows the output voltage to be set to any level within the voltage limit range.

Steps

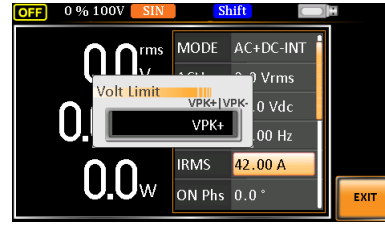
1. Press *Shift* + *V* to access the Volt Limit menu.



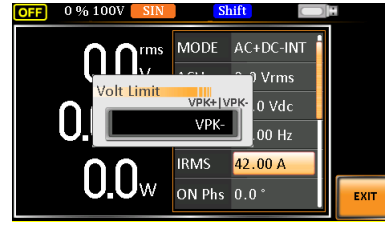
2. When it is under AC+DC-INT, DC-INT, AC+DC-ADD or AC+DC-Sync mode.

   Use the scroll wheel to toggle between VPK+ (upper) and VPK- (lower) settings followed by pressing *Enter* to get into the parameter. Proceed to the step 3 for setup.

VPK+ Setting



VPK- Setting



When it is under AC-INT, AC-ADD or AC-Sync mode.

Use the scroll wheel or the numerical keypad to set value of Vrms limit directly or use the F3 (MAX) and F4 (MIN) soft-keys to set the limit to the maximum or minimum value.

AC–INT, AC-ADD, AC-Sync		
Vrms	Range	10% ~ 100% full range voltage
	Soft-keys	MAX, MIN
Vrms Setting		

Note

The Vrms Limit value defined by user will be generally applied to AC-INT, AC-ADD and AC-Sync modes under the same voltage range, which divides into 2 levels, high range including AUTO and 200V and low range covering 100V.

3. Set the voltage limit (VPK+ & VPK-) with the scroll wheel or the numerical keypad or with the F3 (MAX) and F4 (MIN) soft-keys to set the limit to the maximum and minimum values, respectively.

AC+DC-INT, DC-INT, AC+DC-ADD, AC+DC-Sync		
VPK+	Range	3.5% ~ 100% full range peak voltage
	Soft-keys	MAX, MIN
VPK-	Range	3.5% ~ 100% full range peak voltage

Soft-keys	MAX, MIN
VPK+ Setting	VPK- Setting	
Note

Both the VPK+ and VPK- Limit values defined by user will be generally applied to AC+DC-INT, DC-INT, AC+DC-ADD and AC+DC-Sync modes under the same voltage range, which divides into 2 levels, high range including AUTO and 200V and low range covering 100V.

4. Press *Enter* to confirm the voltage limit setting.

Note

- Voltage limit setting is Not available for both AC+DC-EXT and AC-EXT output modes.
- There 6 sets of voltage limits in total.
- The minimum voltage limit has relative connection with the voltage setting. That is, the voltage setting is never beyond the voltage limit.
- The range of voltage limit will be limited within the certain minimum value in accordance with the output voltage setting.

Setting the Output AC/DC Voltage & Gain

Background	The ACV, DCV and Gain settings set the output voltage level. Before setting the power supply voltage level, set the voltage range and voltage limit beforehand.

Steps

1. Press the *V* key. The ACV parameter will be selectable.

Also, it is available to use the scroll wheel followed by the Enter key to make the ACV parameter selectable as well.

DCV	When it is under AC+DC-INT, AC+DC-ADD or AC+DC-Sync mode.
	Further use the scroll wheel to navigate to the DCV parameter and press *Enter* to make DCV parameter selectable.
	When it is under DC-INT mode.
	Directly press the *V* key or use the scroll wheel to navigate to the DCV parameter and press *Enter* to make DCV parameter selectable.
GAIN	When it is under AC+DC-EXT, AC-EXT or AC-VCA mode.
	Directly press the *V* key or use the scroll wheel to navigate to the GAIN parameter and press *Enter* to make GAIN parameter selectable.
	When it is under AC-ADD mode.

Further use the scroll wheel to navigate to the GAIN parameter and press *Enter* to make GAIN parameter selectable.

2. Set ACV/DCV/GAIN value with the scroll wheel or with the F1 ~ F4 soft-keys.

AC+DC-INT, AC-INT, DC-INT		
ACV	Range	0 volts ~ full range
DCV	Soft-keys	DEF1, DEF2, MAX, MIN
AC+DC-EXT, AC-EXT, AC-VCA		
GAIN	Range	0 times ~ full range
	Soft-keys	DEF1, DEF2, MAX, MIN
AC+DC-ADD, AC-ADD		
ACV	Range	0 volts ~ full range
DCV	Soft-keys	DEF1, DEF2, MAX, MIN
GAIN	Range	0 times ~ full range
	Soft-keys	DEF1, DEF2, MAX, MIN
AC+DC-Sync, AC-Sync		
ACV	Range	0 volts ~ full range
DCV	Soft-keys	DEF1, DEF2, MAX, MIN

3. Press *Enter* to confirm voltage or gain setting.

Defined Settings

The DEF1 and DEF2 settings are user-defined settings. By default they are set to 0.0 and 100.0 volts (100V range), 200.0 volts (200V and AUTO range), respectively and 100 and 200 times for gain. The MAX and MIN soft-keys set voltage or gain parameters to the maximum or minimum value, respectively.

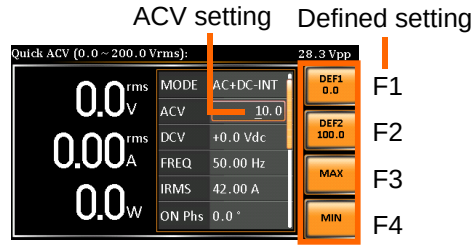
4. Repeat the previous steps 1 ~ 2 to set AC/DC voltage and gain value with the scroll wheel.

5. Press and hold either the *DEF1* or *DEF2* soft-key until "Saved to DEF1/2" is displayed, which indicates the voltage and gain settings are saved to the DEF1 or DEF2 soft-key individually.

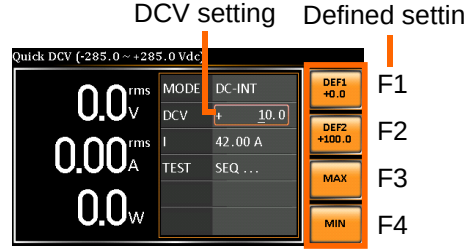
Note

- Trying to set the voltage outside of the voltage limit/range will result in a voltage setting error being displayed on the screen.
- ACV, DCV and GAIN settings under each output mode and range have their own DEF1 and DEF2 saved values, respectively.

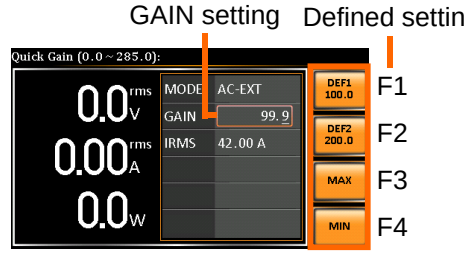
Example of ACV Setting in the AC+DC-INT



Example of DCV Setting in the DC-INT



Example of GAIN Setting in the AC+DC-EXT



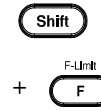
⚠ Note	1. Vrms can only be set up to 164.5 Vrms / 329.0 Vrms for triangular waveform. 2. Go to Menu -> MISC -> V Unit to select the voltage set value unit.

Setting the Frequency Limit

Background	Setting the frequency limit allows the frequency output to be set to any level within the limit range.

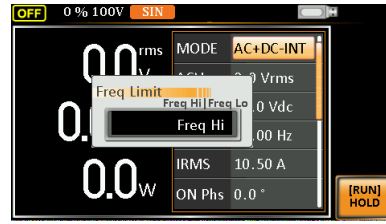
Steps

1. Press *Shift* + *F* to access the Freq Limit menu.

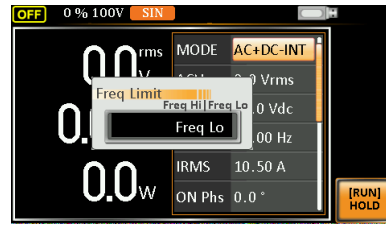


2. Use the scroll wheel to toggle between Freq Hi (upper) and Freq Lo (lower) settings followed by pressing *Enter* to get into the parameter.

Freq Hi Setting



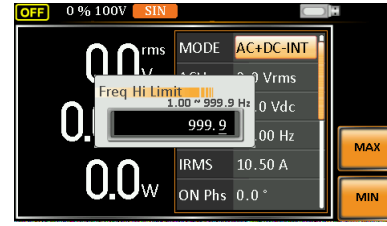
Freq Lo Setting



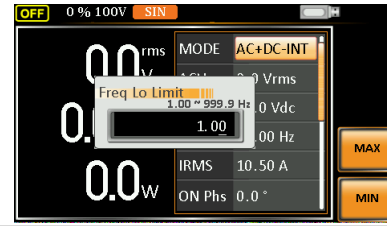
3. Set the frequency limit with the scroll wheel or with the F3 ~ F4 soft-keys. The MAX and MIN soft-keys set the frequency limit to the maximum and minimum, respectively.

AC+DC-INT, AC+DC-ADD		
Freq Hi Limit	Range	1.00 ~ 999.9 Hz / 5000 Hz (depend on model)
	Soft-keys	MAX, MIN
Freq Lo Limit	Range	1.00 ~ 999.9 Hz / 5000 Hz (depend on model)
	Soft-keys	MAX, MIN

Freq Hi Setting

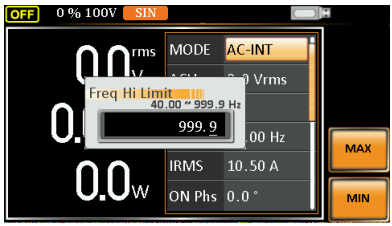


Freq Lo Setting

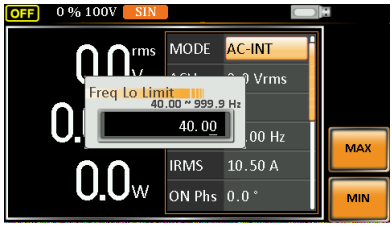


AC-INT, AC-ADD, AC-VCA		
Freq Hi Limit	Range	40.00 ~ 999.9 Hz / 5000 Hz (depend on model)
	Soft-keys	MAX, MIN
Freq Lo Limit	Range	40.00 ~ 999.9 Hz / 5000 Hz (depend on model)
	Soft-keys	MAX, MIN

Freq Hi Setting

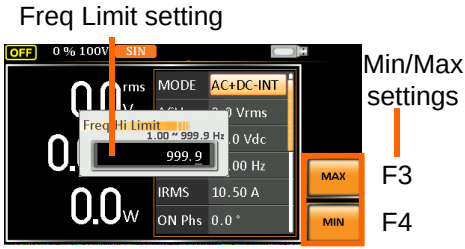


Freq Lo Setting



4. Press *Enter* to confirm the limit setting.

Example of Freq Hi Limit Setting in AC+DC-INT



Note

- Frequency limit setting is Not available under DC-INT, AC+DC-EXT, AC-EXT, AC+DC-Sync and AC-Sync output modes.
- Before change freq limit setting, if FREQ setting value is bigger than desire freq limit value, the freq limit value cannot be change accordingly.
- The range of frequency limit will be limited within the certain minimum value in accordance with the output frequency setting.
- There are 2 sets of frequency limits in total.

Setting the Output Frequency & Signal

Background	The FREQ and SIN settings set the frequency of the output. Before setting the frequency, set the frequency limit.

Steps

1. Press the *F* key to access the FREQ or SIG parameter depending on varied modes.

Also, it is available to use the scroll wheel followed by the Enter key to make the FREQ or SIG parameter selectable as well.

2. Set the frequency or signal with the scroll wheel or with the F1 ~ F4 soft-keys.

AC+DC-INT, AC+DC-ADD		
FREQ	Range	1.00 ~ 999.9 Hz / 5000 Hz (depend on model)
	Soft-keys	DEF1, DEF2, MAX, MIN
AC-INT, AC-ADD, AC-VCA		
FREQ	Range	40.00 ~ 999.9 Hz / 5000 Hz (depend on model)
	Soft-keys	DEF1, DEF2, MAX, MIN
AC+DC-Sync, AC-Sync		
SIG	Option	LINE, EXT

3. Press *Enter* key to confirm the frequency or signal setting.

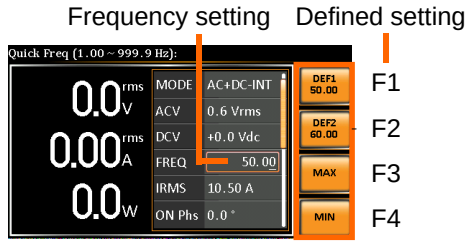
Defined Settings

The DEF1 and DEF2 settings are user defined settings. By default they are set to 50.00 Hz and 60.00 Hz, respectively. The MAX and MIN soft-keys set the frequency to the maximum and minimum, respectively.

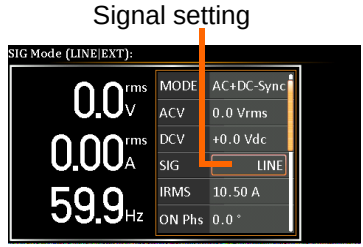
4. Repeat the previous steps 1 ~ 2 to set frequency with the scroll wheel.

5. Press and hold the *DEF1* or *DEF2* soft-key until "Saved to DEF1/2" is displayed. This will save the frequency setting to the DEF1 or DEF2 soft-key individually.

Example of Frequency Setting in AC+DC-INT



Example of Signal Setting in the AC+DC-EXT



Note

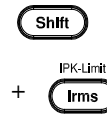
- Trying to set the frequency outside of the frequency limit will result in a frequency setting error being displayed on the screen.
- FREQ setting under each output mode has its own DEF1 and DEF2 saved values, respectively.

Setting the Peak Current Limit

Background	Setting the peak current limit sets a limit on the current that can be sourced by the power supply. Once the output current over the setting, the output will set to off.
⚠ Note	When the peak current limit is tripped, an alarm will sound. Press *Shift + Cancel* to clear the Ipk alarm.

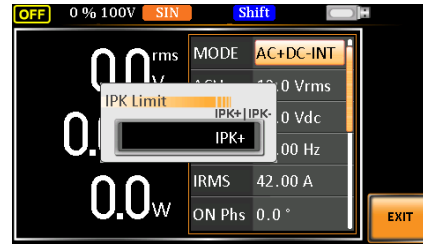
Steps

1. Press *Shift* + *Irms* to access the IPK Limit menu.

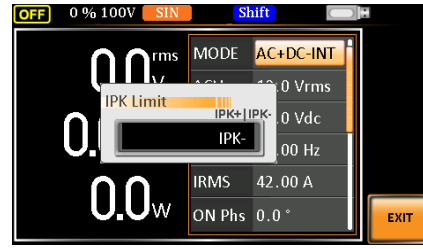


2. Use the scroll wheel to toggle between IPK+ (upper) and IPK- (lower) settings followed by pressing *Enter* to get into parameter, respectively.

IPK+



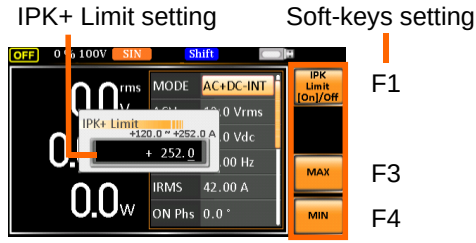
IPK-



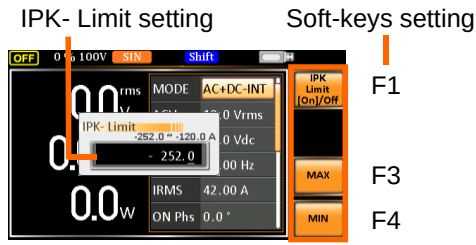
3. Set the peak current (IPK+ & IPK-) with the scroll wheel or with the F3 (MAX) and F4 (MIN) soft-keys to set the current limit to the maximum and minimum values, respectively.

AC+DC-INT, AC–INT, DC-INT, AC+DC-EXT, AC–EXT, AC+DC-ADD, AC–ADD, AC+DC-Sync, AC-Sync, AC-VCA		
IPK+	Range	50 ~ 105% of rate peak current
	Soft-keys	IPK Limit On/Off, MAX, MIN
IPK-	Range	-105 ~ -50% of rate peak current
	Soft-keys	IPK Limit On/Off, MAX, MIN

Example of IPK+ Limit Setting in the AC+DC-INT



Example of IPK- Limit Setting in the AC+DC-INT



IPK Limit On/Off	In theory, It is the function which keeps the IPK limits (+ & -) within the certain range when the predefined values are reached. If, however, this function is turned off, the output will be disabled instantly when either IPK+ or IPK- limit is reached.

4. Press Enter to confirm the peak current setting.

⚠ Note	IPK Limit is set ON by default.

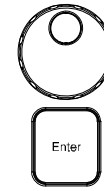
Setting the Output Current Level

Background	The IRMS and I settings set the current of the output. Setting the RMS or AVG current sets a limit on the current that can be sourced by the power supply. Once the output current is over the setting, the output will set to off.

Steps

1. Press *Irms* to access the IRMS or I menu depending on varied modes.

Also, it is available to use the scroll wheel followed by the Enter key to make the IRMS or I parameter selectable as well.



2. Set the IRMS/I level with the scroll wheel or with the F3 ~ F4 soft-keys. The MAX and MIN soft-keys set the IRMS or I level to the maximum and minimum, respectively.

AC+DC-INT, AC–INT, DC-INT, AC+DC-EXT, AC–EXT, AC+DC-ADD, AC–ADD, AC+DC-Sync, AC-Sync, AC-VCA	
IRMS/I	Range 5% ~ 105% of rate current

	Soft-keys IRMS Limit On/Off, IPK CLR, MAX, MIN
Example of IRMS Setting in the AC+DC-INT	Example of I Setting in the DC-INT	IRMS & I Limit On/Off	Almost identical with the concept of previous IPK Limit function, the IRMS/I Limit function keeps the IRMS/I value within the certain limit when the predefined value is reached. If, on the other hand, this function is turned off, the output will be disabled instantly when IRMS/I Limit off level is reached.
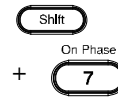
Note	IRMS Limit is set ON by default. The IRMS minimum value will not be less than 1A.

Setting the Output On Phase

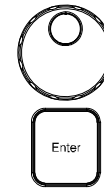
Background	The on phase setting sets the starting phase of the voltage output.

Steps

1. Press *Shift* + *7* to make the ON Phs parameter selectable.



Also, it is available to use the scroll wheel followed by the Enter key to make the ON Phs parameter selectable as well.

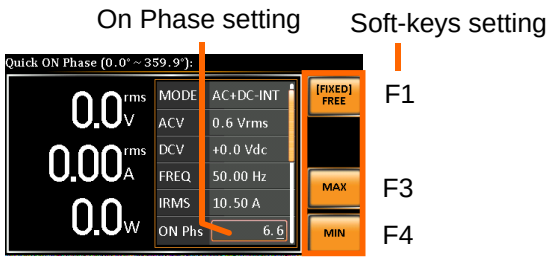


2. Set the *ON Phs* setting with the scroll wheel or the numerical keypad or with the F3 (MAX) and F4 (MIN) soft-keys to set the On Phase to the maximum and minimum values, respectively.

AC+DC-INT, AC-INT, AC+DC-ADD, AC-ADD, AC+DC-Sync, AC-Sync, AC-VCA		
ON Phs	Range	0.0° ~ 359.9°
	Soft-keys	FIXED/FREE, MAX, MIN

3. Press *Enter* to confirm the On Phase setting.

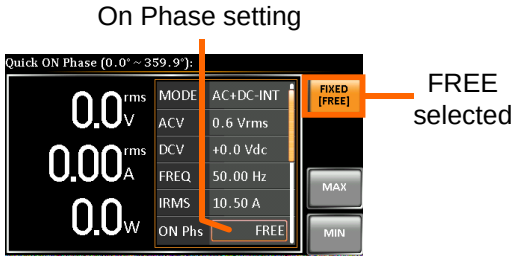
Example of On Phase Setting



FIXED & FREE Modes

Pressing the F1 key to toggle between modes of FIXED, which indicates the user-defined on-phase degree, or FREE, which represents the degree of on-phase is freely determined by the unit itself. When FREE is selected, the both F3-MAX and F4-MIN keys are grayed out, signaling the unavailability by user.

Example of On Phase Setting in FREE Mode

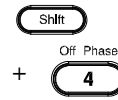


Setting the Output Off Phase

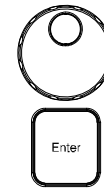
Background	The off phase setting sets the ending phase of the voltage output.

Steps

1. Press *Shift* + *4* to make the OFF Phs parameter selectable.



2. Also, it is available to use the scroll wheel followed by the Enter key to make the OFF Phs parameter selectable as well.

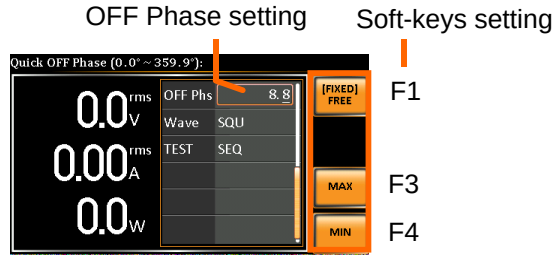


3. Set the *OFF Phs* setting with the scroll wheel or with the F3 (MAX) and F4 (MIN) soft-keys to set the Off Phase to the maximum and minimum values, respectively.

AC+DC-INT, AC-INT, AC+DC-ADD, AC-ADD, AC+DC-Sync, AC-Sync, AC-VCA		
OFF Phs	Range	0.0° ~ 359.9°
	Soft-keys	FIXED/FREE, MAX, MIN

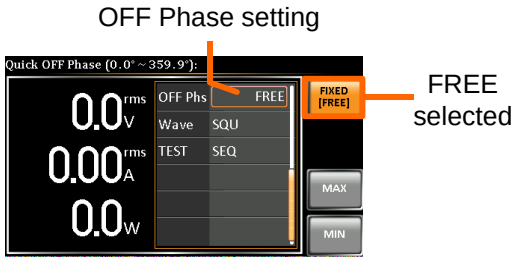
4. Press *Enter* to confirm the Off Phase setting.

Example of OFF Phase Setting



FIXED & FREE Modes	Pressing the F1 key to toggle between modes of FIXED, which indicates the user-defined off-phase degree, or FREE, which represents the degree of off-phase is freely determined by the unit itself. When FREE is selected, the both F3-MAX and F4-MIN keys are grayed out, signaling the unavailability by user.

Example of OFF Phase Setting in FREE Mode



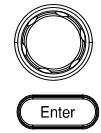
Setting the Sync Phase

Note

- It is available for AC+DC-Sync and AC-Sync Mode output modes only.
- When SIG is set LINE, this function is used for adjusting sync phase of output waveform and phase of power grid.
- When SIG is set EXT, this function is used for adjusting sync phase of output waveform and phase of external input signal.

Steps

1. Use the scroll wheel followed by the Enter key to make the Syn Phs parameter selectable.

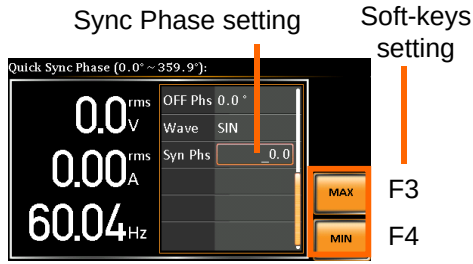


2. Set the *Syn Phs* setting with the scroll wheel or with the F3 (MAX) and F4 (MIN) soft-keys to set the Sync Phase to the maximum and minimum values, respectively.

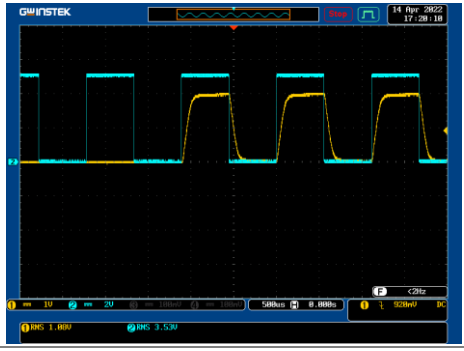
AC+DC-Sync, AC-Sync		
Syn Phs	Range	0.0° ~ 359.9°
	Soft-keys	MAX, MIN

3. Press *Enter* to confirm the Syn Phase setting.

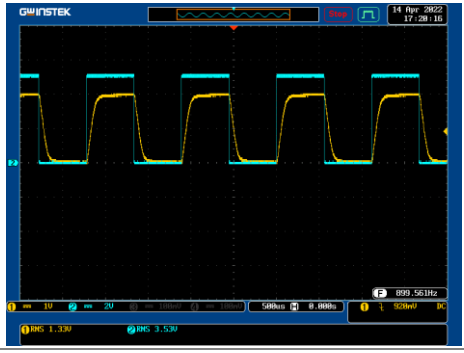
Example of Sync Phase Setting



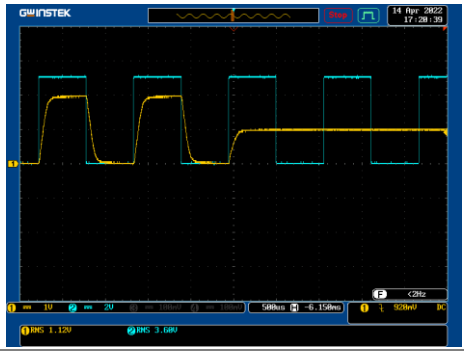
The actual waveform – ACV: 100 Vrms, DCV: 100Vdc, Syn Phs: 0 °, Output On



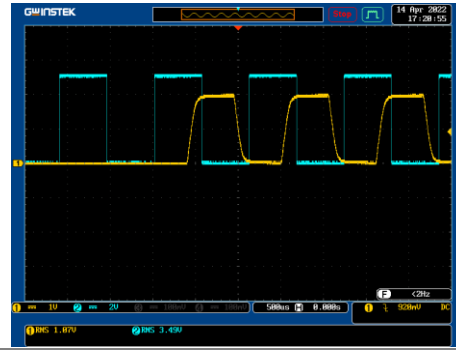
The actual waveform – ACV: 100 Vrms, DCV: 100Vdc, Syn Phs: 0 °, Steady State



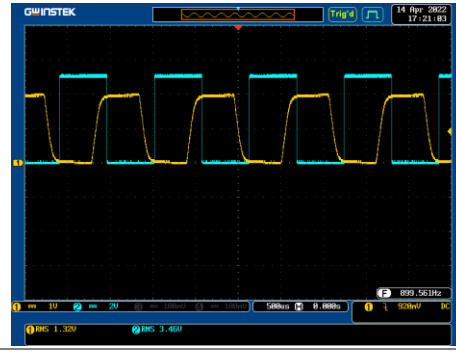
The actual waveform – ACV: 100 Vrms, DCV: 100Vdc, Syn Phs: 0 °, Output Off



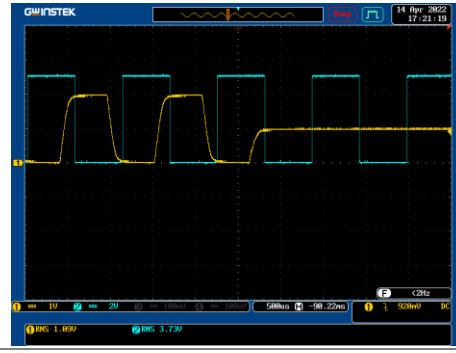
The actual waveform – ACV: 100 Vrms, DCV: 100Vdc, Syn Phs: 120 °, Output On



The actual waveform – ACV: 100 Vrms, DCV: 100Vdc, Syn Phs: 120 °, Steady State



The actual waveform – ACV: 100 Vrms, DCV: 100Vdc, Syn Phs: 120°, Output Off



Switch the Display Modes

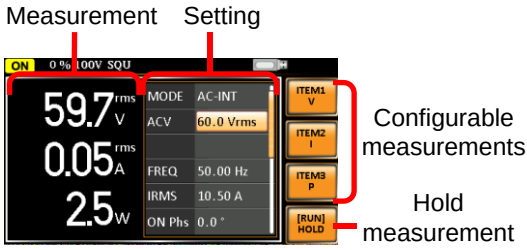
The ASR-3000 power supply has three display modes. The standard display mode shows the power supply setup in the middle and the 3 configurable measurements on the right that correspond to the far-left live-time measurements section. The simple display mode shows all measurement items available on the ASR-3000 with 3 measurement formats switchable at any time. The harmonic display mode shows both harmonic voltage and harmonic current relevant measurements for user.

Steps

1. Press the *Display* key.

2. The display mode will toggle each time when the key is pressed besides locked mode.

Standard Mode

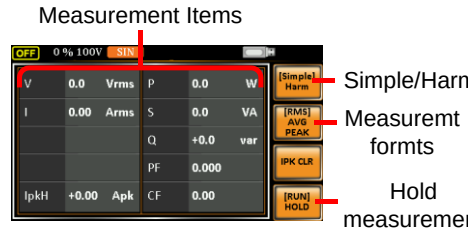


Configuring the Standard Mode Measurements

1. Press the *F1(ITEM1), F2(ITEM2)* or *F3(ITEM3)* soft-key to enter each menu.

2. Use the scroll wheel to select a measurement item and press *Enter* to confirm. Refer to page 97 for more details of measurement parameters.

Simple Mode

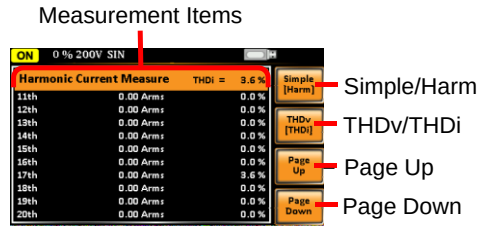


Configuring the Simple Mode Measurements

1. Press the *F2* (RMS/AVG/PEAK) soft-key to toggle among each mode of format.

2. The display will show parameters of measurement for each format. Refer to the page 100 for details.

Harmonic Mode



Configuring the Harmonic Mode Measurements

1. First switch to the Simple mode followed by pressing the *F1* (Simple/Harm) soft-key to enter the Harm display mode.

2. Pressing the *F2* (THDv/THDi) soft-key to toggle between Total Harmonic Distortion Volt (THDv) and Total Harmonic Distortion Current (THDi) measurements.

Note

- Harmonic mode is available for AC-INT mode and 50/60Hz output frequency. SIN, SQU, TRI and ARB 1 - 16 waveforms are also available.
- When measured value of basic waveform of both voltage and current is less than certain value, for which refer to the Specification chapter, the percentage will Not be displayed.

3. When the measurements are beyond one page, which consists of up to 10 items, press the *F3* (Page Up) and *F4* (Page Down) soft-keys to flip through pages.

Hold Measurement

Press the soft-key *F4* to toggle hold on or off. This function will "hold" the current measurements on the display, which means the measurements won't be updated until the function is released.

Note

Hold measurement is available for the Standard and Simple display modes only.

Using the Measurement Function

The 3 configurable measurements, which indicate the live-time measurement in varied units, on the far-right side within the standard display mode can be switched by user anytime in the process of power output, thus providing an instantaneous analysis.

Steps

1. Press the *Display* key to switch to the Standard display mode.

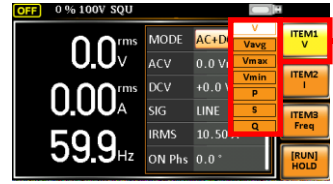
2. Press the *F1(ITEM1)*, *F2(ITEM2)* or *F3(ITEM3)* soft-key to enter each menu.

3. Use the scroll wheel to select a measurement item and press *Enter* to confirm.

ITEM 1	
V	Root Mean Square Voltage
Vavg	Average Voltage
Vmax	Maximum Peak Value of Output Voltage
Vmin	Minimum Peak Value of Output Voltage
P	Real Power
S	Apparent Power (n/a in DC-INT mode)
Q	Reactive Power (n/a in DC-INT mode)

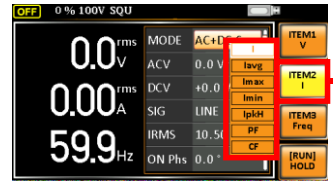
THDv	Total Harmonic Distortion Voltage (available in AC-INT mode only)

Example of ITEM1 in AC+DC-Sync



ITEM 2	
I	Root Mean Square Current
Iavg	Average Current
Imax	Minimum Peak Value of Output Current
Imin	Minimum Peak Value of Output Current
IpkH	Peak Current Hold
PF	Power Factor (n/a in DC-INT mode)
CF	Crest Factor (n/a in DC-INT mode)
THDi	Total Harmonic Distortion Current (available in AC-INT mode only)

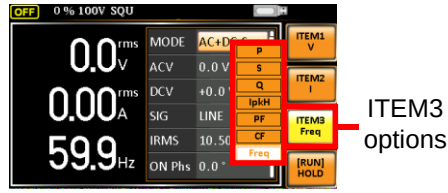
Example of ITEM2 in AC+DC-Sync



ITEM 3	
P	Real Power
S	Apparent Power (n/a in DC-INT mode)
Q	Reactive Power (n/a in DC-INT mode)

IpkH	Peak Current Hold
PF	Power Factor (n/a in DC-INT mode)
CF	Crest Factor (n/a in DC-INT mode)
Freq	Frequency (available in AC+DC-Sync and AC-Sync modes only)

Example of ITEM3 in AC+DC-Sync



Note

Each output mode has varied measurement functions display. Refer to the above tables for detailed options.

Switch the Measurement Format

The 3 measuring formats, RMS, AVG as well as PEAK, on the far-right side within the simple display mode can be switched by user anytime in the process of power output, thus offering an instant readout of diversified calculations.

Steps

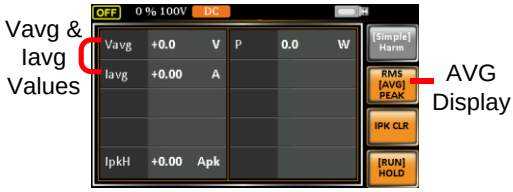
1. Press the *Display* key to switch to the Simple display mode.

2. Press the *F2* (RMS/AVG/PEAK) soft-key to toggle among each mode of format.

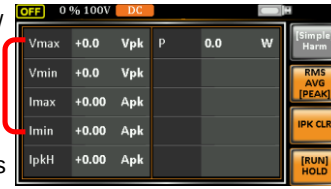
RMS	Root Mean Square value
AVG	Average value
PEAK	Peak value

Example

DC-INT Output Mode



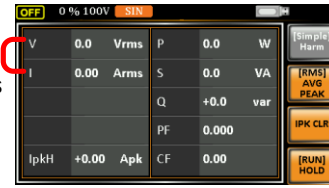
Vmax/ Vmin & Imax/ Imin Values



PEAK Display

All output modes except DC-INT

V & I RMS Values



RMS Display

Vavg & Iavg Values

AVG Display

Vmax/ Vmin & Imax/ Imin Values

PEAK Display

Note

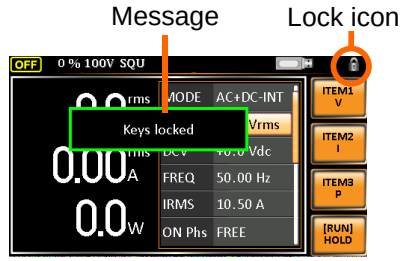
The selected measurement format will be merely shown in the Simple display mode, for which refer to page 95 for further details.

Panel Lock

The panel lock feature prevents settings from being changed accidentally. When activated, all keys and knobs except the Lock/Unlock key and the Output key (if active) will be disabled.

If the instrument is remotely controlled via the USB/LAN/RS232/GPIB interface, the panel lock is automatically enabled. See page 186 for remote control details.

Activate the Panel Lock	Press the *Lock* key to active the panel lock. "Keys locked" appears on the display. A lock icon will appear in the upper-right corner when the panel keys are locked.	 
Disable the Panel Lock	Hold the *Lock* key for ~3 seconds to disable the panel lock. "Keys unlocked" will appear on the display and the lock icon will disappear.	
Example



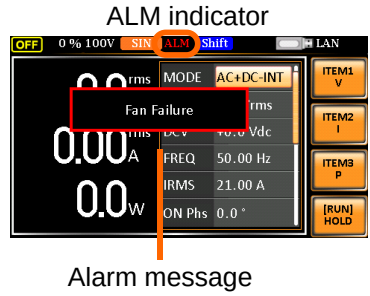
Alarm Clear

Background	The ALM CLR (Alarm Clear) function will clear alarms like Over Current, Over Peak Current, PFC Error, DCDC Error, DCAC Error, Power Input Anomaly, Fan fail, Remote Sense Error, among others. Refer to page 214 for more details.

Steps

1. Press *Shift* + *6* to clear any alarms.

Example



Turning the Output On/Off

When the output is turned on, the DUT can be connected to either the rear panel output or the front panel output.

⚠ WARNING	Both of these outputs are electrically linked. Only one DUT should be connected to any one of the outputs at a time. Using both outputs at the same time is not supported. Using the front and rear outputs at the same time could cause dangerous operating conditions. See page 41 for details about using the output terminals or sockets.

Turn Output On	Press the *Output* key. The Output key will light up in orange and ON will be displayed in the status bar to indicate that the output is on.	Turn Output Off	Press the *Output* key. The Output key light will go out and OFF will be displayed in the status bar to indicate that the output is off.	
Advanced Settings

Using the Remote Sense Function

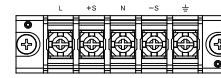
The ASR-3000 can be operated using local or remote voltage sense. By default, the power supply is configured for local sense.

WARNING

- Ensure the output is off before handling the remote sense connectors.
- Use sense cables with a voltage rating exceeding the isolation voltage of the power supply.
- Never connect sensing cables when the output is on. Electric shock or damage to the power supply could result.

Remote Sensing Input Connectors Overview

The remote sensing input connector is located at the rear panel of the ASR-3000.



Local Sense

Local Sense Operation

When using local sense, the remote sensing input terminal is not used. No compensation of any possible voltage drop seen on the load cables is performed. Local sense is only recommended when the voltage drop is of no consequence. By default, the power supply is configured for local sense.

1. Check that the remote sense setting is disabled (page 137).

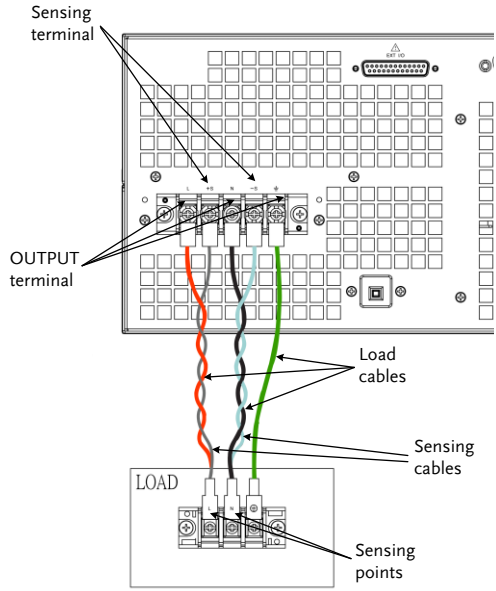
Remote Sense

Remote Sense Operation

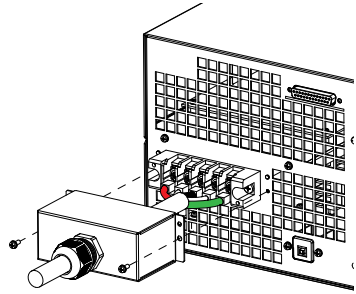
Remote sense is used to compensate for the voltage drop seen across load cables due to resistance inherent in the load cables. The remote sense function can compensate a maximum of 5% of the output voltage and all of output frequency.

1. Configure the remote sense setting to ON (page 137).
2. Connect the Neutral terminal of the remote sense terminal block to the Neutral terminal of the load.
3. Connect the Live terminal of the remote sense terminal block to the Live terminal of the load.

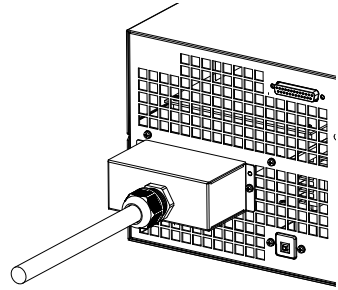
Connection Example



4. After well connecting, install the remote sensing input terminal cover followed by fastening the two screws to fix the cover.



5. The remote sense connection along with the cover is therefore well set up.



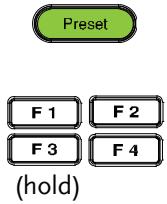
Preset Settings

Save Preset Settings to Local Memory

Up to 10 preset settings can be saved to internal memory.

Steps

1. Press *Preset* followed by clicking with holding on the F1 ~ F4 soft-keys individually to save the present settings to the corresponding memory number.



Presets	M0 ~ M3

2. Press the *Preset* key again to exit from the preset mode.

Example

For example, pressing *Preset* & holding *F1* will save the present settings to memory slot 0 (saved to M0).

Note

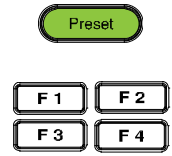
- There are overall 10 groups of memory number for preset setting (M0 ~ M9). Only M0 ~ M3 are available in soft-keys, whereas the rest groups M4 ~ M9 can be saved in the *Save/Recall Files* utility under Menu system. Refer to page 110 for more details.
- The preset key will be lit green when active. A beep will be heard (Buzzer is set to ON) and a message will displayed when the settings are saved.

Load Preset Settings to Local Memory

Any of the 10 preset settings can be recalled from internal memory.

Steps

1. Press *Preset* followed by clicking on the F1 ~ F4 soft-keys individually to load the corresponding memory number.



Presets	M0 ~ M3

2. Press the *Preset* key again to exit from the preset mode.

Example

For example, pressing *Preset* + *F1* will recall the saved settings from memory slot 1 (recalled from M0).

Note

- There are overall 10 groups of memory number for preset setting (M0 ~ M9). Only M0 ~ M3 are available in soft-keys, whereas the rest groups M4 ~ M9 can be recalled in the *Save/Recall Files* utility under Menu system. Refer to page 110 for more details.
- The preset key will be lit green when active. A beep will be heard (Buzzer is set to ON) and a message will displayed when the settings are recalled.

Manage Preset Settings

Preset settings can be easily saved to or recalled from a USB flash drive using the Save/Recall Files utility in the Menu system. Settings can also be deleted (Recalled Default) from local memory using the utility.

File Format	When files are saved to USB they are saved in the following format: PresetX.Set, where X is the memory number M0 ~ M9. The files are saved to USB:/gw. When files are recalled from USB, files must be recalled from the same memory number. For example, the file Preset0.set can only be recalled to memory number M0. The files can only be recalled from the USB:/gw directory.

Steps

1. Press the *Menu* key. The Menu settings will appear on the display.

2. Use the scroll wheel to go to item 9, *Save/Recall Files* and press *Enter*.

3. Go to the *Type* setting using the scroll wheel and press *Enter*. Select *Preset* and press *Enter* to confirm.

4. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves the selected preset memory from the local memory to a USB flash drive.
MEM←USB	Loads a preset memory from a USB flash drive to the selected local memory.

Delete	Deleted (Recalled Default) the selected preset memory from local memory.
Save	Saves the selected preset memory to local memory.
Recall	Recalls the selected preset memory from local memory.

5. Go to the *Memory No.* setting and select the preset memory number to perform the operation on. Press *Enter* to confirm.

Memory No.	0 ~ 9 (M0 ~ M9)

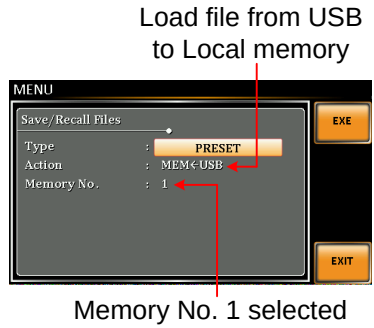
Execute File Operation

6. Press *EXE[F1]* to perform the selected file operation.

Exit

7. Press *EXIT[F4]* to exit from the *Save/Recall Files* settings.

Example



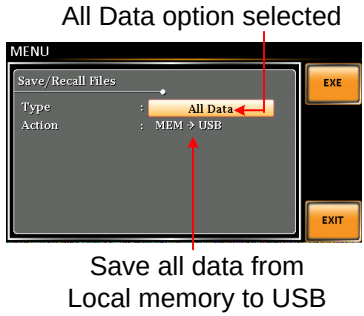
All Data Operation

8. Go back to the *Type* setting using the scroll wheel and press *Enter*. Select *All Data* and press *Enter* to confirm.

9. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves all the files including Preset, Sequence, Simulate and ARB from the local memory to a USB flash drive.
MEM←USB	Loads all the files including Preset, Sequence, Simulate and ARB from a USB flash drive to the local memory.
Delete	Deletes all the files including Preset, Sequence, Simulate and ARB from local memory.

Example



External Keypad Operation

USB Keypad

ASR series supports external keypad, via USB connection, to execute operations including setting and output. Refer to the table below for functions of each key from external keypad.

Key	Function
TAB	Scale -->
/	Set Voltage
*	Set Frequency
0 ~ 9,00, .	Value input
+	Stepping increase Voltage (or Frequency)
-	Stepping decrease Voltage (or Frequency)
Enter	Enter
Back Space	Output On/Off
⚠ Note	This function is Not available for firmware versions prior to V1.20. Please update to the latest firmware and kernal to activate this function.Visit GWInstek official website to download the latest firmware and refer to the update procedure for details.

EXTERNAL CONTROL

The rear panel has 3 signal output connectors. These connectors are used for external control from the menu of this product by using the external signal that includes amplified external voltage, amplified external signal as well as synchronization frequency.

Note that prior to operation, it is required to implement insulation process for external circuit. For example, while connecting to I/O signals of ASR-3000, be sure to have double insulation process for live parts in advance.

Furthermore the state output is always on. The following chapter will give a brief overview each of these connectors.

Using External Control I/O

Overview	The External Control I/O is primarily used to control ASR-3000 externally by using the logic signal. More than that, it is able to monitor Sequence function status remotely with ease.
⚠ Note	Before executing this function, make usre it is ON status via going to MISC – EXTERNAL CONTROL. Properly read the EXTERNAL CONTROL chapter before using.
Specification	Control input • High level: +2.2 V or higher • Low level: +1.0 V or lower • Non-destructive maximum input: +7 V / -5 V • Input Impedance: Pulled up to +5 V with 47 kΩ
	Status output • Output level: 0 / +5 V • Output Impedance: 100 Ω
Pin Assignment	Check the table below for definition of each pin.

Pin No.	I/O	Function	Remark
1	Output	Power source on/off status	0: OFF, 1: On
2	Output	The output on/off status	0: OFF, 1: On
3	Output	IRMS / IPK / Power Limit	0: OFF, 1: On
4	Output	Software busy status	0: Normal, 1: Busy
5	Output	Sequence sync output 0	
6	Output	Sequence sync output 1	
7	Output	Trigger output	
8	Output	Undefined output 1	
9	GND		
10	Input	Undefined input 0	
11	Input	Output off	Falling edge detection
12	Input	Output on	Falling edge detection
13	Input	Sequence start	Falling edge detection
14	Input	Sequence stop	Falling edge detection

15	Input	Sequence hold	Falling edge detection
16	Input	Sequence branch 1	Falling edge detection
17	Input	Sequence branch 2	Falling edge detection
18	GND		
19	Output	+5 V	50 mA or less
20	Output	Reserved	
21	Output	Reserved	
22	Output	Reserved	
23	Output	Reserved	
24	Output	Reserved	
25	Output	Reserved	

Note

The limiter operation is recognized as On when the following conditions exist.

- Output peak current limiter (positive) is operated.
- Output peak current limiter (negative) is operated.
- Output average current limiter is operated.
- Output power limiter is operated.

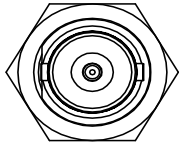
Using External Signal Input Function

Overview

The External Signal Input port is particularly used for several output modes including AC+DC-EXT, AC-EXT, AC+DC-ADD, AC-ADD, AC+DC-Sync, AC-Sync and AC-VCA

Connect to the External Signal Input port on the rear panel via a coaxial cable with a BNC connector when using an external input signal as the signal source with external synchronization.

External Signal Input Connector



EXT GAIN - AC+DC-EXT and AC-EXT mode

Overview

Select AC+DC-EXT or AC-EXT mode to use ASR-3000 as an amplifier specifically for signal input from the external signal input port on the rear panel. The impedance of input is 1MΩ, whilst the frequency range of input is from DC to 5000 Hz.

External Input Gain Range

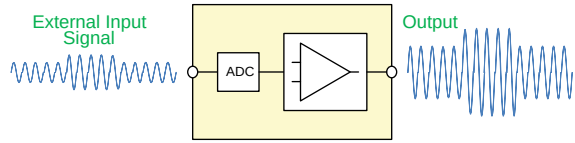
	External Input Gain	
Setting	100V Range	200V Range
Setting Range	0.0 to 285.0	0.0 to 570.0
Resolution	0.1	0.1
Initial Value	100.0	200.0

Equation

Output voltage (V) =

External input signal (V) x Gain (V/V)

Diagram



Note

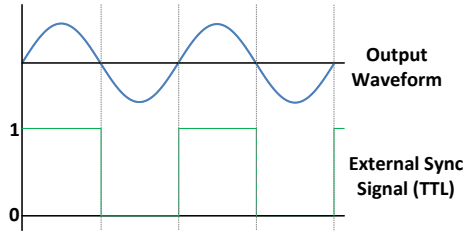
- It is suggested to use an input voltage of ±2.5 V or less to prevent from clipping of the output voltage.
- In addition, never allow an input voltage to pass ±5.5V to avoid issues from the input block.
- If output frequency is higher, the output voltage will be attenuated accordingly.

EXT ADD - AC+DC-ADD and AC-ADD mode

Overview & Concept	Select AC+DC-ADD or AC-ADD mode to add the external signal source signal that includes magnification to the internal signal then power output on the rear panel. The impedance of input is 1MΩ, whilst the frequency range of input is from DC to 5000 Hz.

EXT Sync - AC+DC-Sync and AC-Sync mode

Overview	When AC+DC-Sync or AC-Sync mode is selected, the externally synchronized oscillation function embedded in the ASR-3000 synchronizes the output frequency, specifically, to the frequency of external synchronization TTL signal. It is not allowed to set the synchronization phase difference and the output frequency is able to be synchronized to frequency from 40 to 999.9 Hz.
Diagram & Concept	For SIG option, choose either EXT (signal sync) or LINE (line sync) for external sync signal source. It is noted that synchronous is with power source frequency when LINE is opted. See page 81 for operation steps.



⚠ Note	The limit frequency range of synchronous TTL signal is 40Hz ~ 1kHz. If TTL signal is greater than 1kHz, output will be disabled automatically.

EXT Voltage - AC-VCA mode

Overview	Select AC-VCA mode to use ASR-3000 as an amplifier specifically for DC input from the external signal input port on the rear panel. The input voltage range of input is from DC 0 to 2.5V. The impedance of input is 1MΩ.
Diagram	Note	After magnification, if exceeds the maximum DC voltage value of the range that output waveform will be clamped.

Compiling Arbitrary Waveform Input

Background

In order to generate arbitrary waveforms, it is requested to use a specifically control software on external PC which transfers data, via USB interface, to the arbitrary waveform memory with ASR-3000. Go to GWInstek official website to download the ARB waveform compiling program.

Note

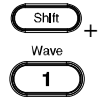
- Arbitrary waveforms cannot be changed when output is on. To change arbitrary waveform, make sure the output is off beforehand.
- It is not allowed to compile the arbitrary waveform memory directly from ASR-3000. Only connecting with a PC with control software via USB interface can complete it.

Memory

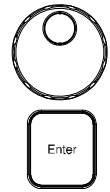
- ✓ Arbitrary waveform memory count: 16
- ✓ Arbitrary waveform length: 4096 words
- ✓ Arbitrary waveform data: 16-bit binary (2's complement format)
- ✓ Valid range of waveform data: -32767 to 32767
  When a value greater than 32767 is input, waveform data will be clipped to 32767. Also, when a value less than -32767 is input, the waveform data will be clipped to -32767.

Output Arbitrary Waveform on ASR-3000

1. Press *Shift* + *Test* to access the Wave menu.



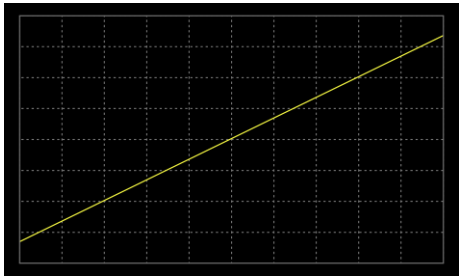
Alternatively, it is available to use scroll wheel followed by the *Enter* key to enter the Wave menu.



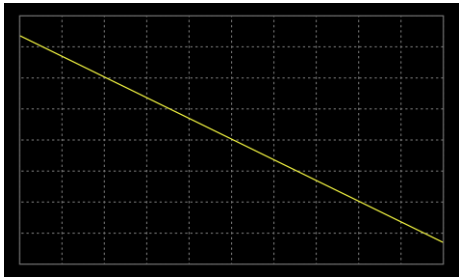
2. Choose one of the ARB waveforms (ARB 1 to ARB 16) with scroll wheel.

Default Waveform Setting

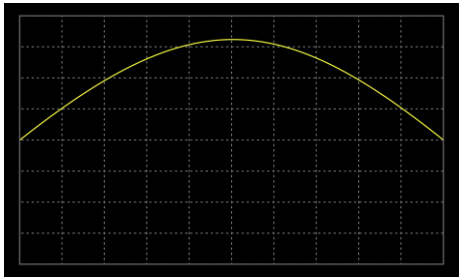
ARB 1 Ramp (rising)



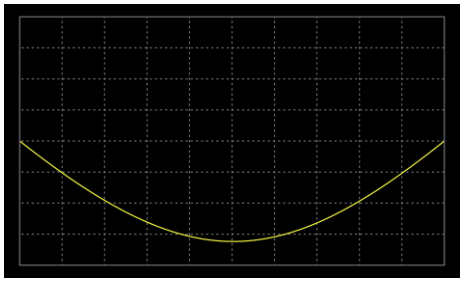
ARB 2 Ramp (falling)



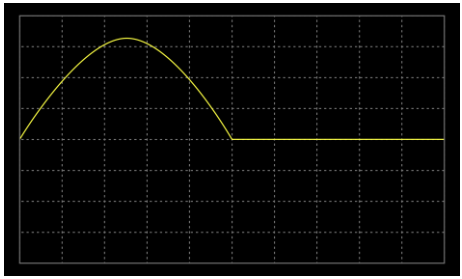
ARB 3 Sine wave, half-cycle(positive pole)



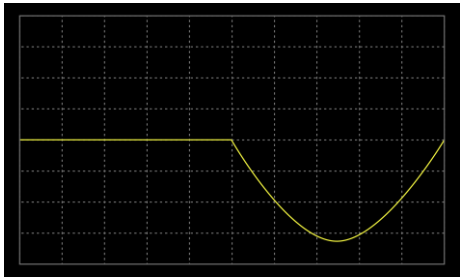
ARB 4 Sine wave, half-cycle(negative pole)



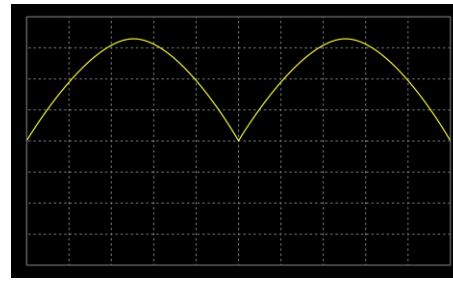
ARB 5 Sine wave, half-wave rectification(positive polarity)



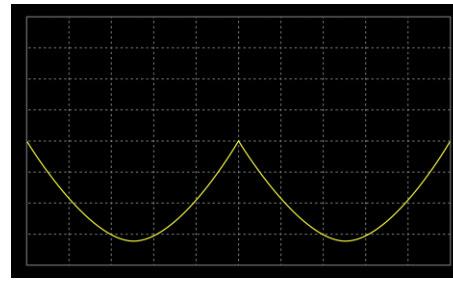
ARB 6 Sine wave, half-wave rectification(negative polarity)



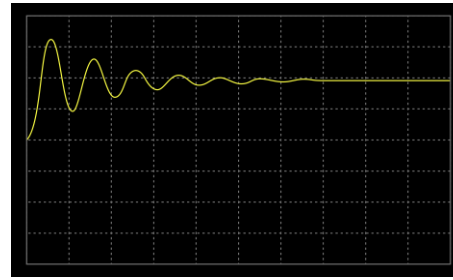
ARB 7 Sine wave, full-wave rectification(positive polarity)



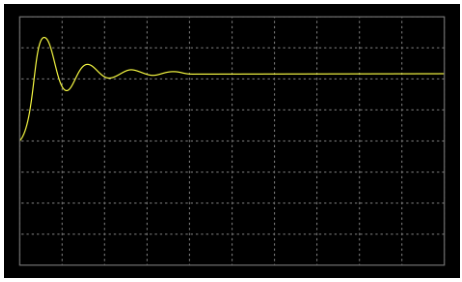
ARB 8 Sine wave, full-wave rectification(negative polarity)



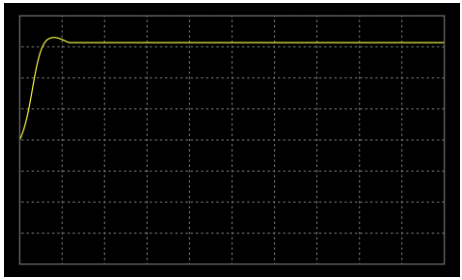
ARB 9 Second order step response(damping coefficient 0.1)



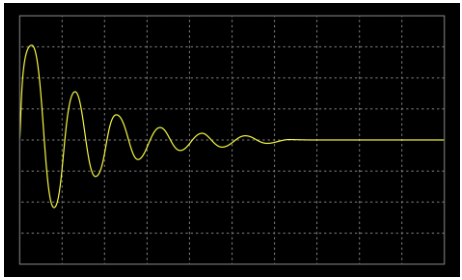
ARB 10 Second order step response(damping coefficient 0.2)



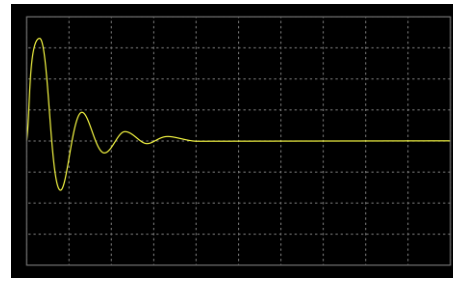
ARB 11 Second order step response(damping coefficient 0.7)



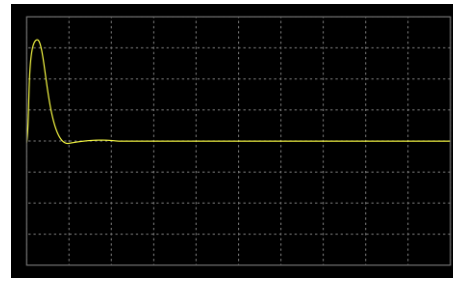
ARB 12 Second order impulse response(damping coefficient 0.1)



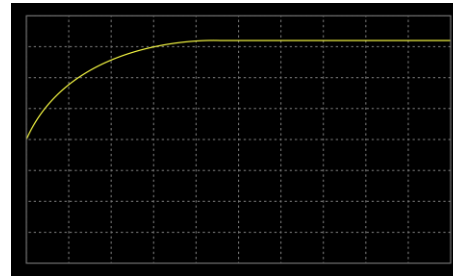
ARB 13 Second order impulse response(damping coefficient 0.2)



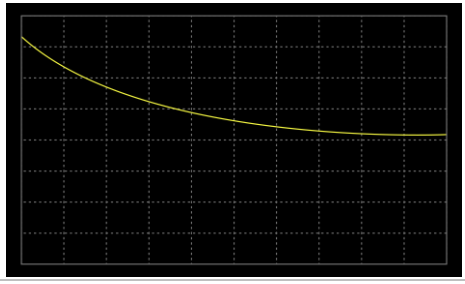
ARB 14 Second order impulse response(damping coefficient 0.7)



ARB 15 Exponential (rising)



ARB 16 Exponential (falling)

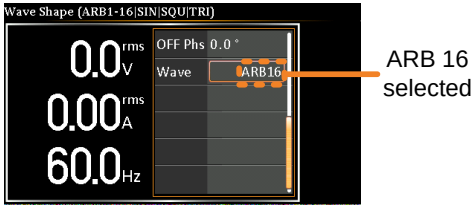


Note

Del ARB1~16 restores back to Default for ARB1~16 (page 127~128). Del All Data restores back to Default for all ARB (page 128~129).

3. Press *Enter* to confirm the waveform setting.

Example



Note

When the input peak value of ARB waveform is not in the full scale 32768, the ratio of maximum value of voltage output by ARB waveform will decrease accordingly.

Manage Arbitrary Waveform Settings

Arbitrary waveform settings can be easily saved to or from a USB flash drive using the Save/Recall Files utility in the Menu system. Files can also be deleted from local memory using the utility.

File Format	When files are saved to USB they are saved in the following format: ARBX.ARB, where X is the memory number 1 ~ 16 (ARB0 ~ ARB16). The files are saved to USB:/gw. When files are recalled from USB, files must be recalled from the same memory number. For example, the file ARB1. SEQ can only be recalled to memory number ARB1. The files can only be recalled from the USB:/gw directory.

Steps

1. Press the *Menu* key. The Menu settings will appear on the display.

2. Use the scroll wheel to go to item 10, *Save/Recall Files* and press *Enter*.

3. Go to the *Type* setting using the scroll wheel and press *Enter*. Select *ARB* and press *Enter* to confirm.

4. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves the selected ARB memory from the local memory to a USB flash drive.
MEM←USB	Loads the ARB memory from a USB flash drive to the selected local memory.

Delete	Deletes the selected ARB memory from local memory.

5. Go to the *Memory No.* setting and select the sequence memory number to perform the operation on. Press *Enter* to confirm.

Memory No.	1 ~ 16 (ARB1 ~ ARB16)

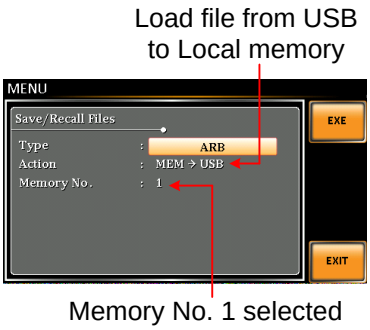
Execute File Operation

6. Press *EXE[F1]* key to perform the file operation.

Exit

7. Press *EXIT[F4]* key to exit from the *Save/Recall Files* settings.

Example



All Data Operation

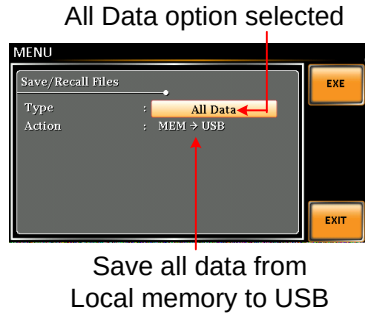
8. Go back to the *Type* setting using the scroll wheel and press *Enter*. Select *All Data* and press *Enter* to confirm.

9. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves all the files including Preset, Sequence, Simulate and ARB from the local memory to a USB flash drive.

MEM←USB	Loads all the files including Preset, Sequence, Simulate and ARB from a USB flash drive to the local memory.
Delete	Deletes (Recall Default) all the files including Preset, Sequence, Simulate and ARB from local memory.

Example



Single Arbitrary Wave Default

From the previous step 4, execute the "Delete" action to restore the selected ARB memory back to the default setting.

All Arbitrary Waves Default

From the previous step 9, execute the "Delete" action to restore the entire ARB memory back to the default setting.

Note

For default ARB waveform setting, please refer to page 121 through 128.

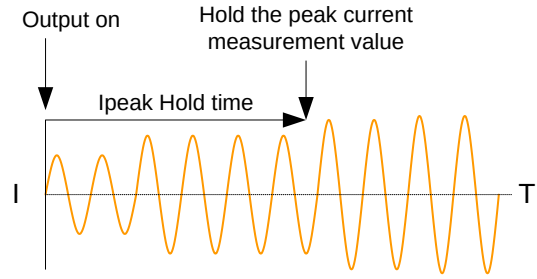
MISCELLANEOUS

The Miscellaneous menu contains miscellaneous parameter settings.

T Ipeak, hold

The T Ipeak, hold function sets the hold time for the peak current measurement. After the output is turned on, the ASR-3000 will delay starting the peak current measurement by this hold time.

Concept in diagram



Note

- The hold peak current will be updated when new measurement is greater than the previous value. By contrast, it will not update when new measurement is less than the hold peak current.
- Ipeak hold time begins counting only when the output function is turned on.
- Ipeak measurement is not executed during the set Ipeak hold time.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

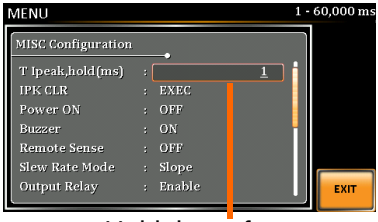
3. Go to the *T Ipeak, hold(msec)* setting using the scroll wheel and press *Enter*. Set the time and press *Enter* again to confirm.

T Ipeak	1 ~ 60,000 ms

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Hold time of current peak value setting

IPK CLR

The peak current measured during output process can be easily cleared out via this function. It is applicable for user to restart measuring the peak current value when necessity emerges.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

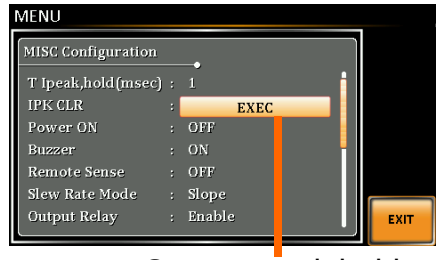
3. Go to the *IPK CLR* setting using the scroll wheel and press *Enter* on the EXEC button. The measured hold peak current value will be zeroed immediately.

IPK CLR EXEC

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Current peak hold value clear

Note

Although the hold peak current will be zeroing at once right after the execution of Ipkh CLR action, the zeroing value, however, will be soon updated when new measurement greater than 0 occurs during output process.

Power ON

The Power ON setting allows you to have the power-on output or other operation functions on automatically after startup. The settings that are loaded are the last settings that were present in the standard mode before the unit was turned off last.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

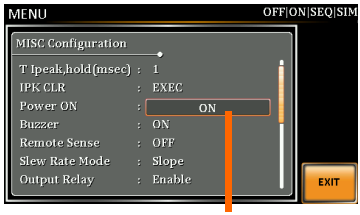
3. Go to the *Power ON* setting using the scroll wheel and press *Enter*. Select a setting and press *Enter* to confirm.

ON	Set power-on output ON with the setting that was loaded before the unit was last turned off.
OFF	Disable this function active.
SEQ	Execute the sequence that was loaded before the unit was last turned off.
SIM	Execute the simulation that was loaded before the unit was last turned off.

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Power ON setting

Buzzer

The Buzzer setting turns the buzzer sound on or off for key presses.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

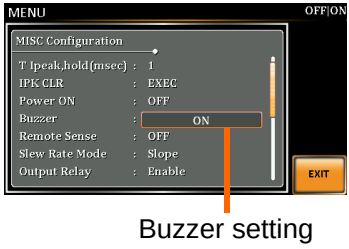
3. Go to the *Buzzer* setting using the scroll wheel and press *Enter*. Turn the setting on or off and press *Enter* again to confirm.

Buzzer	ON, OFF

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Remote Sense

The remote sense function detects the output voltage at the sensing input terminal. This function compensates for voltage drops across the load cables when the load is connected to the ASR-3000 over a long distance.

Note The remote sense function can compensate a maximum of 5% of the output voltage. The maximum output voltage when compensation is used is limited by the rated voltage.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

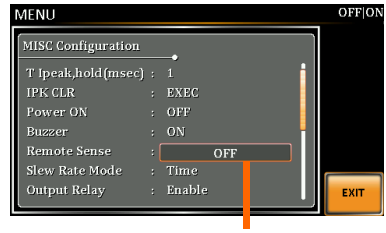
3. Go to the *Remote Sense* setting using the scroll wheel and press *Enter*. Turn the setting on or off and press *Enter* again to confirm.

Remote Sense	ON, OFF

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Remote Sense setting

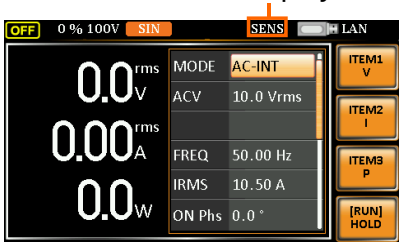
Note

Remote sense function for AC-INT, DC-INT, AC-SYNC mode and 100V, 200V range and SIN wave shape and slew rate mode on Time Only.

Display

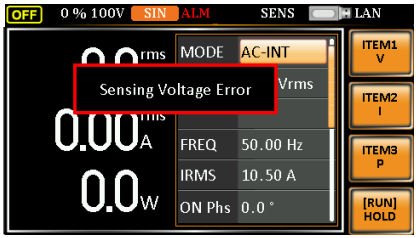
When the remote sense function is on, the displayed voltage value is the voltage measured at the sense terminal and the symbol "SENS" is displayed on the status bar for standard and simple mode display.

SENS displayed



WARNING

- Before connecting the remote sense cables, turn off the output and peripherals. Please see page 105 for more information on the remote sense cabling instructions.
- If the remote sense wires are loose or falling (specifically the remote sense terminal + and the load terminal + & -), the display would show a warning message as below.



Slew Rate Mode

The slew rate, which is described as the fluctuating change of voltage per unit of time, can be customized by user in the 2 modes containing Time and Slope elaborated below for ASR-3000 models.

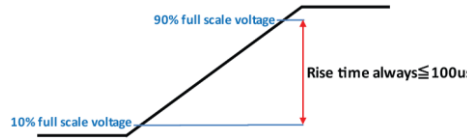
Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

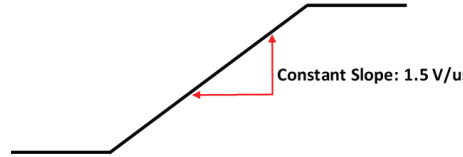
2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

3. Go to the *Slew Rate Mode* setting using the scroll wheel and press *Enter*. Choose the slew rate mode and press *Enter* again to confirm.

Time — Regardless of the output voltage scale, the rising time of slew rate is definitely no more than 100µs.



Slope — The rising slew rate is constantly fixed in 1.5 V/µs with varied rising time in accord with differed output voltage scale.



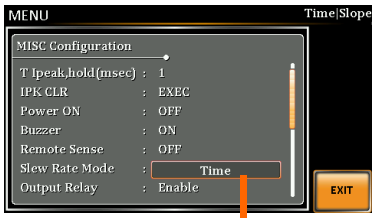
Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Note

Voltage drop occurs in output voltage due to the set waveform or frequency under the Slope mode. It is suggested to adopt the Time mode when precise sine wave voltage output is required.

Example



Slew Rate setting

Output Relay

The internally built-in output relay function has close relation with the power output function by default. That is to say, when output is on, the output relay will be activated if output relay is enabled; by contrast, the output relay will be deactivated when output is off. On the other hand, output relay function disabled means output terminal is under the condition of high impedance and output relay retains the state of conducting for good, which is suitable for the condition of turning output on/off rapidly.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

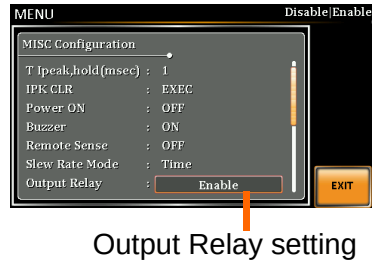
3. Go to the *Output Relay* setting using the scroll wheel and press *Enter*. Enable or disable output relay mode and press *Enter* again to confirm.

Output Relay	Enable, Disable

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Output Relay setting

THD Format

Choose one of the THD (Total Harmonic Distortion) equations. The equations of 2 varied modes (IEC by default) of Harmonic Format below are for, specifically, by the time the upper limit of measured harmonic order is 100.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

3. Go to the *THD Format* setting using the scroll wheel and press *Enter*. Choose the harmonic mode and press *Enter* again to confirm.

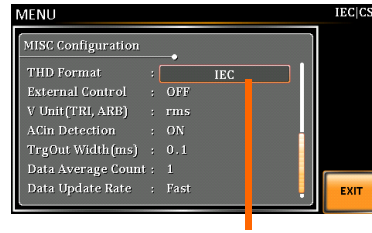
IEC & Equation	The ratio of rms value of the second to the 100th harmonic component is computed to that of the fundamental. $$\frac{\sqrt{\sum_{O=2}^{N}(F_O)^2}}{F_1} \times 100$$
CSA & Equation	The ratio of rms value of the second to the 100th harmonic component is computed to that of the rms value of the first to 100th component. $$\left[\frac{\sqrt{\sum_{O=2}^{N}(F_O)^2}}{\sqrt{\sum_{O=1}^{N}(F_O)^2}}\right] \times 100$$

Parameter	▪ F_1: Fundamental (1st harmonic) component ▪ F_O: Fundamental or harmonic component ▪ O: Measured harmonic order ▪ N: Always 100

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



THD Format setting

External Control

User can enable or disable the External Control I/O input. When External Control I/O input is set as disabled, the ASR-3000 series status will remain output.

Steps

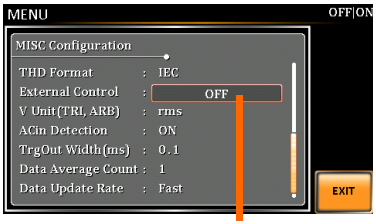
1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

3. Go to the *External Control* setting using the scroll wheel and press *Enter*. Enable or disable External Control I/O and press *Enter* again to confirm selection.

ON	Signal will be input from the pin 12 to the pin 18 of External Control I/O, and ASR-3000 series is able to receive external input signal and execute control action.
OFF	Signal will be input from the pin 11 to the pin 18 of External Control I/O, and ASR-3000 series is Not able to receive external input signal.

Example



External Control setting

V Unit

User can freely select voltage set value unit as either RMS or PEAK only when output waveform is selected TRI or ARB.

Steps

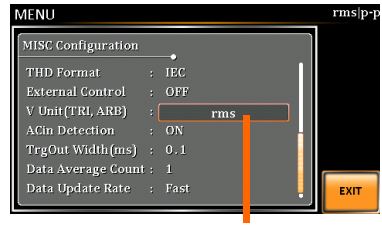
1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

3. Go to the *V Unit* setting using the scroll wheel and press *Enter*. Choose the setting voltage unit and press Enter again to confirm selection.

rms	Set the setting voltage unit to rms for all of output waveform.
p-p	Set the setting voltage unit to peak for TRI and ARB output waveform only.

Example



V unit setting

ACin Detection

This function, in essence, allows user to enable or disable the input power detection.

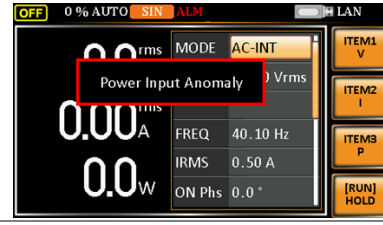
Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

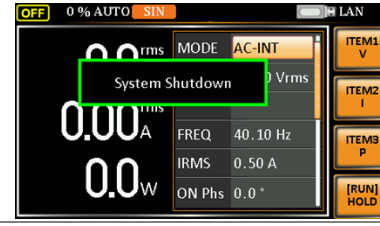
2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

3. Go to the *Acin Detection* setting using the scroll wheel and press *Enter*. Enable or disable ACin Detection and press *Enter* again to confirm selection.

Input Detection: ON	When Output is On and it detects input power abnormal, the message " Power Input Anomaly" will be displayed. Be noted that buzzer sounds and ALM status shows when Buzzer is On.

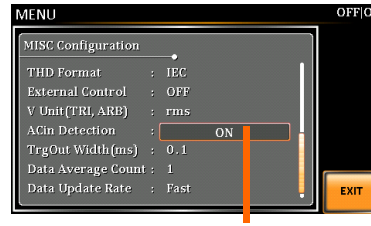


Input Detection: ON	When Output is Off and it detects input power abnormal, the message "System Shutdown" will be displayed. Be noted that buzzer couldn't sound and ALM status couldn't show when Buzzer is On.



Input Detection: OFF	Neither buzzer beep nor warning message will be shown when it detects input power abnormal regardless of Buzzer activation or not.

Example



Acin Detection setting

Note

When "Power Input Anomaly" or "System Shutdown" message appears, it is Not available to operate any button or execute any SCPI command. Besides, SCPI Error message will be shown on the condition of System Error.

Trigger Out Width

This function, which is paired with External Control I/O pin, generates a TTL pulse signal output synchronously with output waveform.

Note

- When the set time of Pulse Width is greater than a period time of output frequency, output Pulse maintains High Level.
- The Trigger signal generates in 0 degrees only.
- This function can be executed under AC+DC mode, even DC Offset is configured.
- This function is Not available for DC-INT, AC+DC-EXT and AC-EXT modes.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

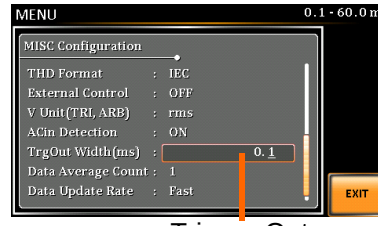
3. Go to the *TrgOut Width(ms)* setting using the scroll wheel and press *Enter*. Set the time and press *Enter* again to confirm.

TriOut Width	0.1 ~ 60.0 ms

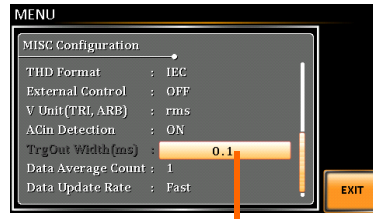
Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example

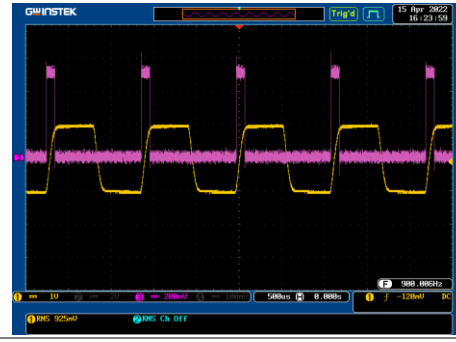


Trigger Out Width setting

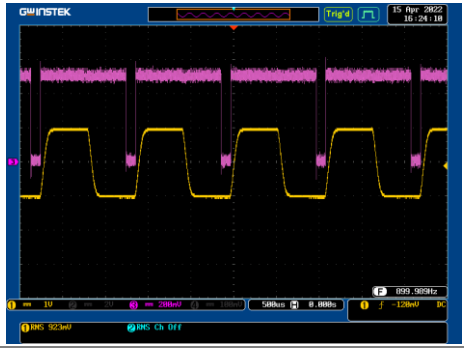


It is grey-out under unavailable modes, but value can be set stilll.

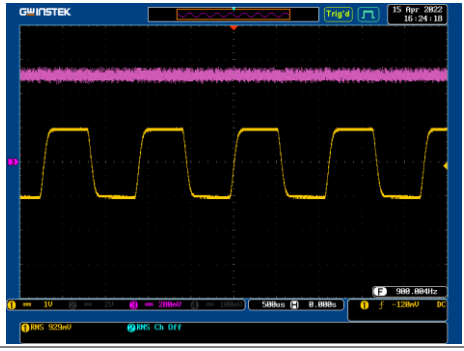
The actual waveform – AC-INT Mode, Frequency 900 Hz, TrgOut Width 0.1 ms



The actual waveform – AC-INT Mode, Frequency 900 Hz, TrgOut Width 1 ms

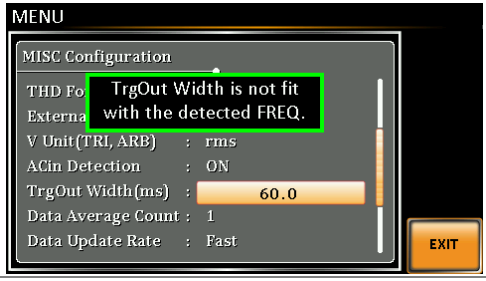


The actual waveform – AC-INT Mode, Frequency 900 Hz, TrgOut Width 1.1 ms



Note

When abnormality of TrgOut output is detected, which is “Hi” all the time, the message of “TrgOut Width is not fit with the detected FREQ” will be shown as the following screenshot.



Data Average Count

This function allows user to designate an exact count number to average the measured data. It is particularly practical for large changes in load or power of low input signal frequency.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

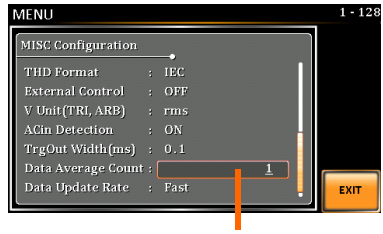
3. Go to the *Data Average Count* setting using the scroll wheel and press *Enter*. Set the count number and press *Enter* again to confirm.

Data Average Count	1 - 128

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Data Average Count setting

Note

- The available parameters for Data Average Count: Vrms, Vmax, Vmin, Irms, Imax, Imin, PF, CF, P, S, Q.
- The Unavailable parameters for Data Average Count: Vavg, Iavg, IpkH, Freq, THDv, THDi.

Data Update Rate

This function allows user to define update rate (time period) for the measured data. Take the 5s for example, the measured data updates in an interval of every 5 second.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

3. Go to the *Data Update Rate* setting using the scroll wheel and press *Enter*. Set the rate period and press *Enter* again to confirm.

Data Update Rate	Fast/0.1s/0.25s/0.5s/1s /2s/5s/10s/20s

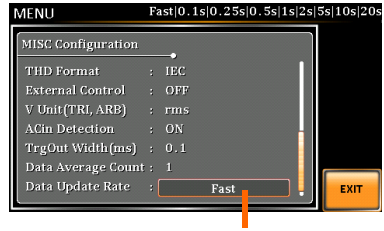
Note

The option "Fast" indicates 0.005s equal to 5ms.

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



Data Update Rate setting

Note

- The available parameters for Data Update Rate: Vrms, Vmax, Vmin, Irms, Imax, Imin, PF, CF, P, S, Q.
- The Unavailable parameters for Data Update Rate: Vavg, Iavg, IpkH, Freq, THDv, THDi.

TrgOut Source

This function allows user to select Trigger Output type for execution.

Steps

1. Press the *Menu* key. The Menu setting will appear on the display.

2. Use the scroll wheel to go to item 2, *MISC Configuration* and press *Enter*.

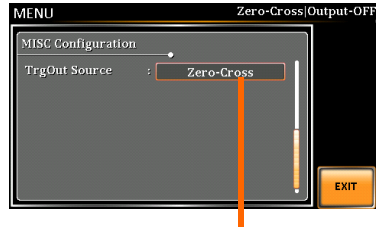
3. Go to the *TrgOut Source* setting using the scroll wheel and press *Enter*. Select one of the types and press *Enter* again to confirm.

TrgOut Source	Zero-Cross, Output-Off

Exit

4. Press *Exit[F4]* to exit from the MISC Configuration settings.

Example



TrgOut Source setting

⚠ Note

When output frequency setting is greater than 1kHz, the function of Zero-Cross option is Not available.

TEST MODE FUNCTION

There are two test modes, Sequence Mode and Simulate Mode respectively, available for user to execute. Refer to the following chapters for details in necessity.

Sequence Mode

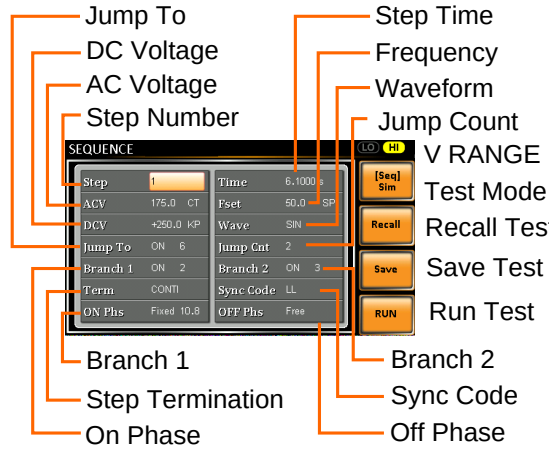
Sequence Mode Overview

Background

The Sequence function works with DC-INT, AC-INT and AC+DC-INT modes with full AC waveforms containing sine, square, triangle as well as arbitrary. The available parameters, which will be introduced in later sectors, vary depending on selected output modes.

A Sequence function is comprised of up to the maximum 999 steps.

Setting Screen Overview



Sequence Parameter Overview

The Sequence function is comprised of a minimum of 2 steps that are executed in user defined sequences.

Each step can have different step time, voltage level, start & stop phase, frequency and wave.

Note

Step 0 is assigned as a "Standby" step. At the end of the test the unit will shift to the standby step.

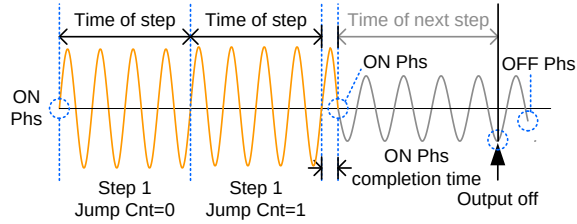
	Step	Assigns the step number.
	Time	Sets the step duration time. This step time is exclusive of any transition time needed to match start phases and stop phase. See the diagram on page 159 for details.
	ACV	Sets the AC voltage level. There are 3 secondary voltage settings that determine how the voltage is output. CT: Sets the voltage level of the step immediately to ACV values. KP: Sets the voltage level to "keep" the voltage of the previous step. SP: Linearly increases or decreases the values from the end of the previous step to the end of the current step.
⚠ Note	It is available for AC+DC-INT and AC-INT modes only.	
	DCV	Sets the DC voltage level. There are 3 secondary voltage settings that determine how the voltage is output. CT: Sets the voltage level of the step immediately to DCV values. KP: Sets the voltage level to "keep" the voltage of the previous step. SP: Linearly increases or decreases the values from the end of the previous step to the end of the current step.
⚠ Note	It is available for AC+DC-INT and DC-INT modes only.	

	AC/DC Voltage Range (ACV/DCV)	There are 2 voltage range settings: HI 200V & LO 100V, which result in varied ranges of ACV and DCV values, respectively.
	Fset (Frequency)	Sets the frequency of the step. There are 3 secondary frequency settings that determine how the frequency is output. CT: Sets the frequency level of the step immediately to Fset values. KP: Sets the frequency level to "keep" the frequency of the previous step. SP: Linearly increases or decreases the frequency from the end of the previous step to the end of the current step.
⚠ Note	It is available for AC+DC-INT and AC-INT modes only.	
	Wave	Sets the outputting waveform of the step. Up to 4 waves including sine, square, triangle and arbitrary (1-16) wave shapes are available.
⚠ Note	It is available for AC+DC-INT and AC-INT modes only.	
	Jump To	The Jump To setting determines which step to jump to at the end of the step. If Jump To is turned off, the unit will follow the Term (Step termination) setting for the step.
	Jump Cnt	Determines the number of times to loop the jump step.

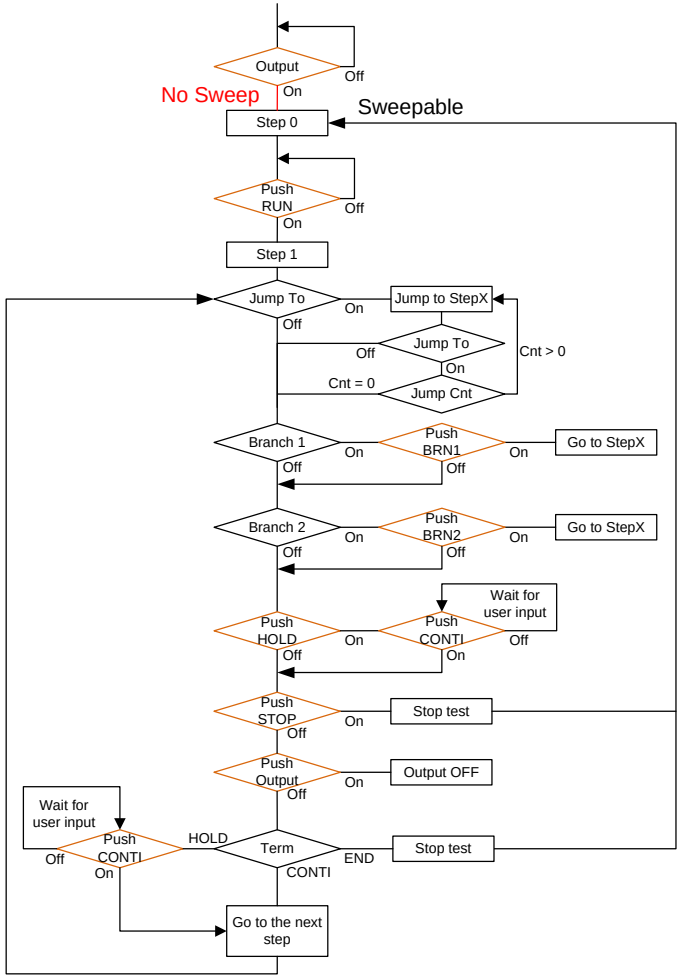
Branch1/ Branch2	The Branch settings allow you to make a selectable branch within the sequence when the sequence is running or on hold. The branch1 or branch2 actions are enabled by pressing the *F1* or *F2* function keys, or by using the :TRIG:SEQ:SEL:EXEC remote control command. After the branch step(s) have completed the unit will return back to the step from which the branch was executed and continue to run the step from where it left off.
Term (Termination)	Determines the step termination settings at end of the step. The CONTI setting tells the sequence to go to the next step. The HOLD setting will pause the output at the end of the step and will only continue to the next step when CONTI [F3] is pressed. The END setting will end the sequence and go to Step 0(standby step).
Sync Code	Sets the synchronous code including LL, LH, HL and HH for each step.
ON/OFF Phs	Sets the start and stop phase of the AC waveform for each step. The ON Phs setting sets the starting phase *of the step*. OFF Phs sets the off phase *for the output* when the output if turned off.

⚠ Note — It is available for AC+DC-INT and AC-INT modes only.

Sequence Example



Process Flow in Sequence Step



Note

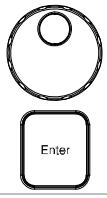
The Remote Sense will be forcibly set OFF and Slew Rate Mode is set to time after entering the SEQ Mode. It will automatically return to the previous setting after exiting from the SEQ Mode.

Sequence Settings

Entering the Sequence Menu

1. Press *Test* key.

Alternatively, it is available to navigate, with scroll wheel, to the *TEST SEQ…* option followed by pressing the *Enter* key to enter the *SEQUENCE* menu.

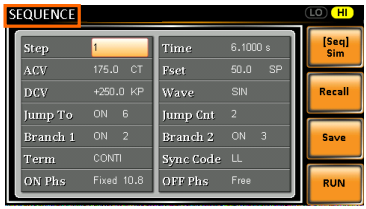


Note

It is available for AC+DC-INT, AC-INT and DC-INT modes only.

2. Press *Seq/Sim[F1]* key to toggle to the *SEQUENCE* Mode.

Sequence Mode



F1 soft-key

Note

It is available for AC+DC-INT mode only.

Steps

3. Use the scroll wheel to go to the *Step* setting and press *Enter*.

4. Use the scroll wheel to select the step number. 0 is always the starting step for the sequence.

Step	0 ~ 999

5. Go to the *Time setting* and set the duration of the step.

Time	0.0001 ~ 999.9999s

6. In order to adjust both ACV and DCV voltage range between HI and LO, it is required to set up outside of the SEQUENCE menu. Refer to the page 68 for details. The selected range will be shown on the top bar.

Range	LO - 100V, HI - 200V

7. Go to the *ACV* setting and set the output voltage for the step. If you input an ACV value that is not within the voltage range, the warning message below will be shown.

Next set the secondary voltage settings to determine characteristics of the voltage output.

ACV	0.0 ~ 400.0V (Range 200V) 0.0 ~ 200.0V (Range 100V)

Secondary settings	CT (Constant), KP (Keep), SP (Sweep) Note: Step 0 can only be set to either CT or SP.

8. Go to the *DCV* setting and set the output voltage for the step. If you input a DCV value that is not within the voltage range, the warning message below will be shown.

Next set the secondary voltage settings to determine characteristics of the voltage output.

DCV	0.0 ~ 570.0V (Range 200V) 0.0 ~ 285.0V (Range 100V)
Secondary settings	CT (Constant), KP (Keep), SP (Sweep)

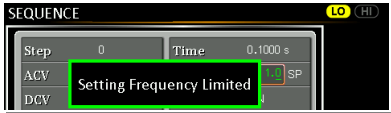
Note

Step 0 can only be set to either CT or SP.

Note

ACV setting range varies when Wave is TRI or ARB1~16. The setting range is 0~570 Vpp or 0~1140 Vpp when V Unit is set p-p.

9. Go to the *Fset* setting and set the frequency of the step. If you input a frequency value that is not within the range, the warning message below will be shown.



Fset	1.0 ~ 999.9Hz

Secondary settings	CT (Constant), KP (Keep), SP (Sweep) Note: Step 0 can only be set to either CT or SP.

10. Go to the *Wave* setting and choose which waveform to output.

Wave	SIN, SQU, TRI, ARB1 - 16

11. Go to the *Jump To* setting and choose which step to jump to, or turn the setting off.

Step	ON, OFF, 0 ~ 999

12. Go to the *Jump Cnt* setting and set the number of times the current step will loop.

Jump Cnt	1 ~ 9999, 0 Note: A setting of 0 will set the number of jump step to be infinite.

13. Go to the *Branch 1/2* setting and set a step to branch to.

Branch 1, 2	ON, OFF, 0 ~ 999

14. Go to the *Term* setting and set the step termination setting. CONTI will automatically go to the next step at the end of the step. END will return to step 0. HOLD will stay at the current step until you allow the sequence to continue to the next step.

Term	CONTI, END, HOLD

15. Go to the *Sync Code* setting and set the synchronous code when the step has started.

Sync Code	LL, LH, HL, HH

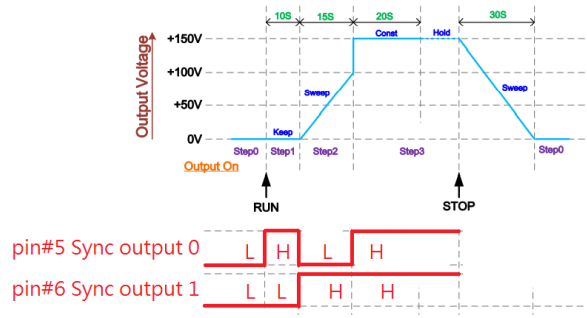
16. Go to the *ON Phs* setting and set the starting phase of the step. The *Fixed* indicates user-defined degree.

ON Phase	Free, Fixed
ON Phase	0.0 ~ 359.9°
Resolution	0.1°

17. Go to the *OFF Phs* setting and set the end phase of the step. The *Fixed* indicates user-defined degree.

OFF Phase	Free, Fixed
OFF Phase	0.0 ~ 359.9°
Resolution	0.1°

Example of Using Sequence Function



The example above shows how to generate a test procedure in DC-INT mode by each step.

Step No.	0	1	2	3
Step Time	30 S	10 S	15 S	20 S
DCV	0 V	50 V	100 V	150 V
2nd Setting	SP	KP	SP	CT
Term	---	CONTI	CONTI	HOLD
Sync Code	LL	LH	HL	HH

Save a Sequence to Local Memory

Saving a Sequence

Sequence settings can be saved to one of 10 memory slots (SEQ0 ~ SEQ9).

Steps

1. Press *Save[F3]* key firstly.
2. A list of memory slots prompts where it is available to use scroll wheel followed by pressing *Enter* to execute save action.
3. A prompt message will appear when the save action is successful.

Save	SEQ0 ~ SEQ9

Recall a Sequence from Local Memory

Recall a Sequence

Sequence settings can be recalled from one of 10 memory slots (SEQ0 ~ SEQ9).

Steps

1. Press *Recall[F2]* key firstly.
2. A list of memory slots prompts where it is available to use scroll wheel followed by pressing *Enter* to execute recall action.
3. A message will appear when the settings are recalled successfully.

Recall	SEQ0 ~ SEQ9

Manage Sequence Settings

Sequence settings can be easily saved to or from a USB flash drive using the Save/Recall Files utility in the Menu system. Files can also be deleted from local memory using the utility.

File Format	When files are saved to USB they are saved in the following format: SEQX.SEQ, where X is the memory number 0 ~ 9 (SEQ0 ~ SEQ9). The files are saved to USB:/gw. When files are recalled from USB, files must be recalled from the same memory number. For example, the file SEQ0. SEQ can only be recalled to memory number SEQ0. The files can only be recalled from the USB:/gw directory.

Steps

1. Press the *Menu* key. The Menu settings will appear on the display.

2. Use the scroll wheel to go to item 10, *Save/Recall Files* and press *Enter*.

3. Go to the *Type* setting using the scroll wheel and press *Enter*. Select *SEQUENCE* and press *Enter* to confirm.

4. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves the selected sequence memory from the local memory to a USB flash drive.
MEM←USB	Loads the sequence memory from a USB flash drive to the selected local memory.

Delete	Deletes (Recall Default) the selected sequence memory from local memory.

5. Go to the *Memory No.* setting and select the sequence memory number to perform the operation on. Press *Enter* to confirm.

Memory No.	0 ~ 9 (SEQ0 ~ SEQ9)

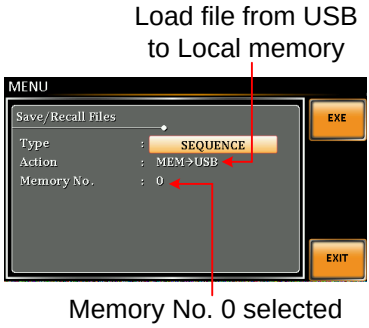
Execute File Operation

6. Press *EXE[F1]* key to perform the file operation.

Exit

7. Press *EXIT[F4]* key to exit from the *Save/Recall Files* settings.

Example



All Data Operation

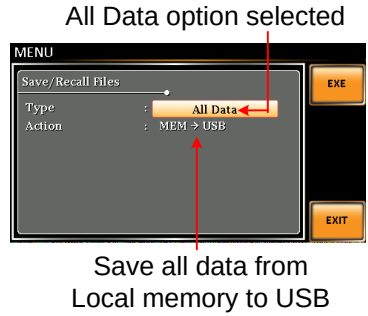
8. Go back to the *Type* setting using the scroll wheel and press *Enter*. Select *All Data* and press *Enter* to confirm.

9. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves all the files including Preset, Sequence, Simulate and ARB from the local memory to a USB flash drive.

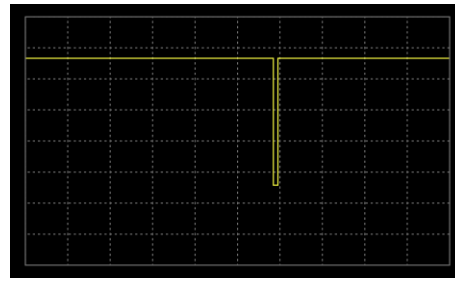
MEM←USB	Loads all the files including Preset, Sequence, Simulate and ARB from a USB flash drive to the local memory.
Delete	Deletes (Recall Default) all the files including Preset, Sequence, Simulate and ARB from local memory.

Example

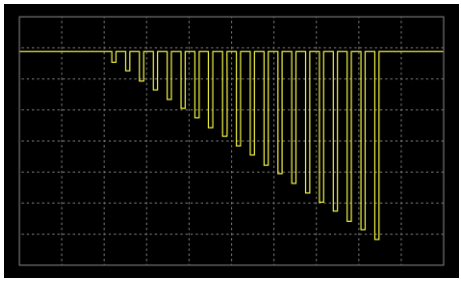


Default Sequence Setting

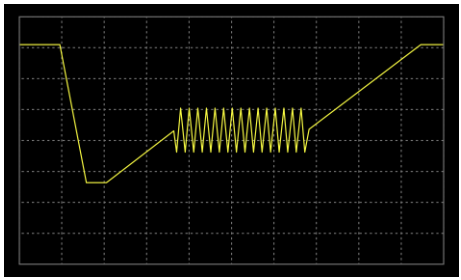
SEQ6 Momentary drop in supply voltage



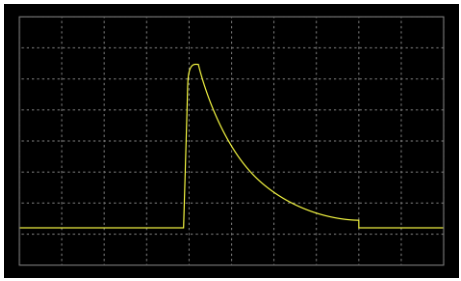
SEQ7 Reset test for Level1 systems with 12V



SEQ8 Starting Profile



SEQ9 Test2 Tr: 10ms, Td: 40ms



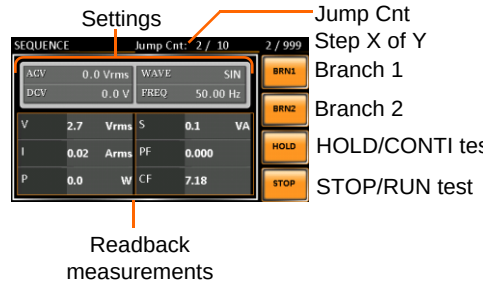
Running a Sequence

Background

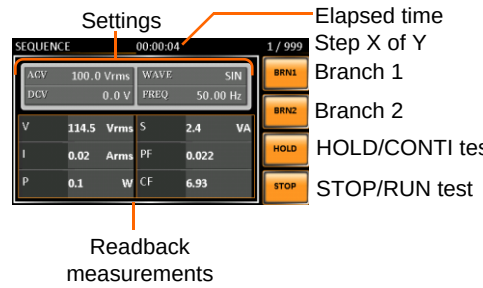
When running a sequence, the display changes to the sequence run view.

Run Screen Overview

With Jump Cnt display



With Elapsed time display



Steps

1. Press *Output*.

2. Press *RUN[F4]* key. The test will start to run.

   The settings of current step will be shown at the top of the screen and the measurement readout will be shown on the bottom of the screen.

   The top-right of the screen will display the

current step number by the total number of steps (current step/total steps).

3. The test will continue to run until the last step has run, or *Stop[F4]* key is pressed. When the test has finished/stopped, the screen will return to the original settings screen.

4. If any of the steps have a conditional branch configured, the branch can be manually evoked during run time by pressing the *BRN1[F1]* soft-key (branch 1) or the *BRN2[F2]* soft-key (branch 2). Alternatively the :TRIG:SEQ:SEL:EXEC command can also be used evoke a conditional branch.

Hold Test

5. To pause the test mid-way, press *HOLD[F3]* key.

Continue Test

6. To continue a paused test, press *CONTI[F3]* key.

Note

- Use the display key on panel to toggle between Jump Cnt and Elapsed time displays.
- The time of both Jump Cnt and Elapsed time will be normal when Step time is greater than 1 second.
- When Jump Cnt is set 0, it appears Inf in display.

Simulate Mode

Simulate Mode Overview

Background	The Simulate function, which works in AC+DC-INT mode only, is used to test power supply fluctuation. This function is able to simulate common abnormalities in mains power such as fluctuations in voltage, phase and frequency. These simulations can be run as one-off anomalies or cyclic anomalies.
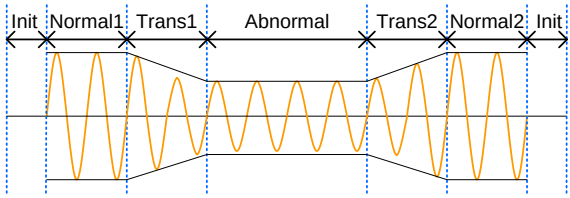
Setting Screen Overview	Step Overview	The Simulate function is comprised of 6 steps. Each step is run sequentially in the following order: Initial, Normal1, Trans1, Abnormal, Trans2, Normal2 and Initial.

Initial	The Initial step is used as the initial and final settings of the waveform simulation. This is the standby step before the test starts and the standby step after the test ends.
Normal1	This step configures the normal output conditions that precede the abnormal conditions.

Trans1	This step configures the transition from normal to abnormal conditions. This step will linearly interpolate the normal settings to the abnormal settings. This step can be skipped for abrupt state changes.
Abnormal	This step contains the abnormal conditions for the simulation.
Trans2	This step configures the transition from abnormal to normal conditions.
Normal2	This step configures the normal conditions that supersede the abnormal conditions.



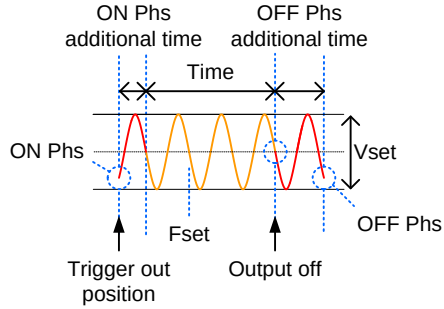
Parameter Overview

The following table shows which parameters are available for each step.

Step\Parameter	Initial	Normal1	Trans1	Abnormal	Trans2	Normal2
Time	X	✓	✓	✓	✓	✓
ACV	✓	✓	X	✓	X	X
ON Phs	✓	✓	X	✓	X	✓
Fset	✓	✓	X	✓	X	X
OFF Phs	✓	✓	X	✓	X	✓
Wave	✓	✓	X	✓	X	X
Code	✓	✓	✓	✓	✓	✓
Repeat	✓	✓	✓	✓	✓	✓

Time	Sets the duration time of the step. When the ON Phs=ON, the total duration of the step is equal to the Time setting + ON Phs=ON duration.
ACV	Sets the voltage of the step. Not applicable for the Trans 1/2 steps and the Normal2 step.
ON Phs	Sets the starting phase of the waveform for the step. Not applicable for the Trans 1/2 steps.
Fset	Sets the frequency of the step. Not applicable for the Trans 1/2 steps and the Normal2 step.
OFF Phs	Sets the off phase of the waveform after the output has been turned off. Not applicable for the Trans 1/2 steps.
Wave	Sets the outputting waveform of the step. Not applicable for the Trans 1/2 steps and the Normal2 step.
Code	Sets the synchronous code including LL, LH, HL and HH for the duration of the step.
Repeat	Indicates the number of times the simulation will be run, from Normal1 to Normal2. A value of 0 indicates infinite repeats. The repeat setting is the same for each step.

The following diagram illustrates the relationship between each of the parameters in a step.



Note

After entering the SIM Mode, It will forcibly set Remote Sense OFF and Time Slew Rate.

Simulate Settings

Entering the Simulate Menu

1. Press *Test* key.

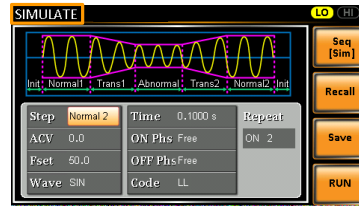
Alternatively, it is available to navigate, with scroll wheel, to the *TEST SIM…* option followed by pressing the *Enter* key to enter the *SIMULATE* menu.

Note

It is available for AC+DC-INT mode only.

2. Press *Seq/Sim[F1]* key to toggle to the *SIMULATE* Mode.

Simulate Mode



F1 soft-key

Steps

3. Use the scroll wheel to go to the *Step* setting and press *Enter*.

4. Use the scroll wheel to select one of the simulate steps and press *Enter*.

Steps	Initial, Normal1, Trans1, Abnormal, Trans2, Normal2

5. Go to the *Time* setting and set the duration of the step.

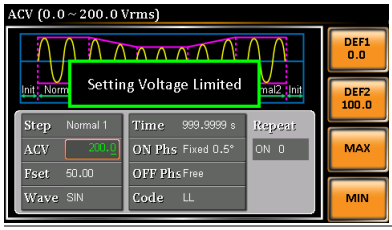
Time	0.0001 ~ 999.9999s (Normal1, Normal2 and Abnormal) 0.0000 ~ 999.9999s (Trans1 and Trans2) Note: For Trans1 and Trans2, it supports a value of 0, which will skip the step.

6. In order to adjust ACV voltage range between HI and LO, it is required to set up outside of the SIMULATE menu. Refer to the page 68 for details. The selected range will be shown on the top bar.

Range

Range	LO - 100V, HI - 200V

7. Go to the *ACV* setting and set the Vrms level of the step. If you input an ACV value that is not within the voltage range, the warning message below will be shown.
   Not applicable for Trans1, Trans2 and Normal2.

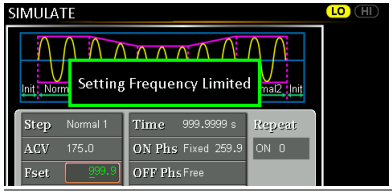


ACV	0.0 ~ 400.0V (Range 200V) 0.0 ~ 200.0V (Range 100V)

8. Go to the *ON Phs* setting and set the starting phase of the step.
   Not applicable for Trans1 and Trans2.

ON Phase	Free, Fixed
ON Phase	0.0 ~ 359.9°
Resolution	0.1°

9. Go to the *Fset* setting set the frequency of step. If you input a frequency value that is not within the range, the warning message below will be shown.
   Not applicable for Trans1, Trans2 and Normal2.



Fset	1.0 ~ 999.9Hz

10. Go to the *OFF Phs* setting and set the end phase of the step.
    Not applicable for Trans1 and Trans2.

OFF Phase	Free, Fixed
OFF Phase	0.0 ~ 359.9°
Resolution	0.1°

11. Go to the *Wave* setting and set the wave of step.
    Not applicable for Trans1, Trans2 and Normal2.

Wave	SINE

12. Go to the *Code* setting and set the synchronous code of the step.

Code	LL, LH, HL, HH

13. Lastly, go to the *Repeat* parameter select the number of times the simulation will repeat the Normal1-Trans1-Abnormal-Trans2-Normal2 sequence of steps. A value of 0 will set the number of repetitions to infinite.

Repeat	1 ~ 9999, 0(infinite)

Save a Simulation to Local Memory

Saving a Simulation

Simulation settings can be saved to one of 10 memory slots (SIM0 ~ SIM9).

Steps

1. Press *Save[F3]* key firstly.
2. A list of memory slots prompts where it is available to use scroll wheel followed by pressing *Enter* to execute save action.
3. A prompt message will appear when the save action is successful.

Save	SIM0 ~ SIM9

Recall a Simulation from Local Memory

Recall a Simulation

Simulation settings can be recalled from one of 10 memory slots (SIM0 ~ SIM9).

Steps

1. Press *Recall[F2]* key firstly.
2. A list of memory slots prompts where it is available to use scroll wheel followed by pressing *Enter* to execute recall action.
3. A message will appear when the settings are recalled successfully.

Recall	SIM0 ~ SIM9

Manage Simulation Settings

Simulation settings can be easily saved to or from a USB flash drive using the Save/Recall Files utility in the Menu system. Files can also be deleted from local memory using the utility.

File Format	When files are saved to USB they are saved in the following format: SIMX. SIM, where X is the memory number 0 ~ 9 (SIM0 ~ SIM9). The files are saved to USB:/gw. When files are recalled from USB, files must be recalled from the same memory number. For example, the file sim0.sim can only be recalled to memory number SIM0. The files can only be recalled from the USB:/gw directory.

Steps

1. Press the *Menu* key. The Menu settings will appear on the display.

2. Use the scroll wheel to go to item 10, *Save/Recall Files* and press *Enter*.

3. Go to the *Type* setting using the scroll wheel and press *Enter*. Select *SIMULATE* and press *Enter* to confirm.

4. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves the selected simulation memory from the local memory to a USB flash drive.
MEM←USB	Loads the simulation memory from a USB flash drive to the selected local memory.

Delete	Deletes (Recall Default) the selected simulation memory from local memory.

5. Go to the *Memory No.* setting and select the simulation memory number to perform the operation on. Press *Enter* to confirm.

Memory No.	0 ~ 9 (SIM0 ~ SIM9)

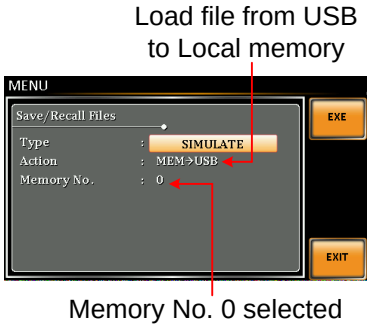
Execute File Operation

6. Press *EXE[F1]* key to perform the file operation.

Exit

7. Press *EXIT[F4]* key to exit from the *Save/Recall Files* settings.

Example



All Data Operation

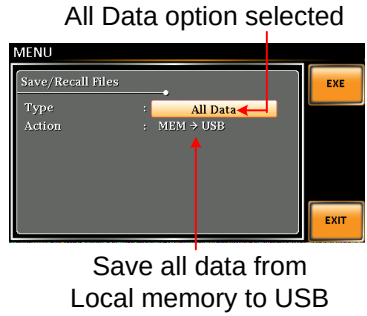
8. Go back to the *Type* setting using the scroll wheel and press *Enter*. Select *All Data* and press *Enter* to confirm.

9. Go to the *Action* setting and choose the file operation and then press *Enter*.

MEM→USB	Saves all the files including Preset, Sequence, Simulate and ARB from the local memory to a USB flash drive.

MEM←USB	Loads all the files including Preset, Sequence, Simulate and ARB from a USB flash drive to the local memory.
Delete	Deletes (Recall Default) all the files including Preset, Sequence, Simulate and ARB from local memory.

Example



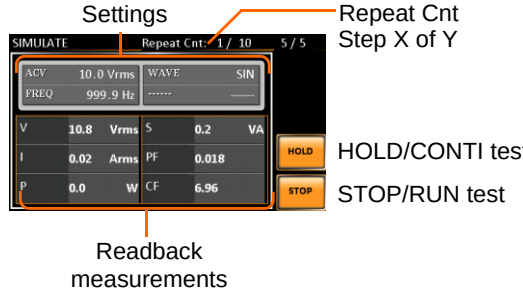
Running a Simulation

Background

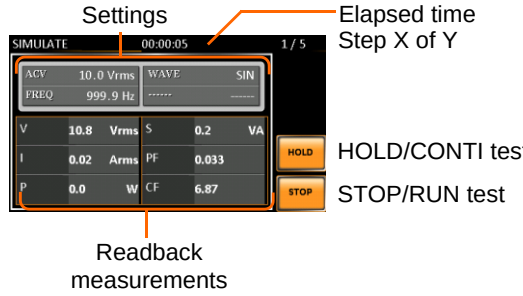
When running a simulation, the display changes to the simulate run view.

Run Screen Overview

With Repeat Cnt display



With Elapsed time display



Steps

1. Press *Output* key.

2. Press *Run[F4]* key. The test will start to run.

   The settings of current step will be shown at the top of the screen and the measurement readout will be shown on the bottom of the screen.

   The top-right of the screen will display the current step number of the simulation.

   1/5 = Normal1 2/5 = Trans1
   3/5 = Abnormal 4/5 = Trans2
   5/5 = Normal2

3. The test will continue to run until the last repeat step has run, or *Stop[F4]* key is pressed or the output is turned off*. When the test has finished/stopped, the screen will return to the original settings screen.

   * If the OFF-phase has been set, the output will continue until the OFF-phase setting is satisfied.

Hold Test

4. To pause the test mid-way, press *HOLD[F3]* key.

Continue Test

5. To continue a paused test, press *CONTI[F3]* key.

Note

- Use the display key on panel to toggle between Repeat Cnt and Elapsed time displays.
- The time of both Repeat Cnt and Elapsed time will be normal when Step time is greater than 1 second.
- When Repeat Cnt is set 0, it appears Inf in display.

COMMUNICATION INTERFACE

This chapter describes basic configuration of IEEE488.2 based remote control. For a command list, refer to the programming manual, downloadable from GW Instek website, www.gwinstek.com

Note

If the instrument is remotely controlled via the USB/LAN/RS232/GPIB interface, the panel lock is automatically enabled.

Interface Configuration

Configure Ethernet Connection

The Ethernet interface can be configured for a number of different applications. Ethernet can be configured for basic remote control or monitoring using a web server or it can be configured as a socket server.

The ASR-3000 supports both DHCP connections so the instrument can be automatically connected to an existing network or alternatively, network settings can be manually configured.

Ethernet Parameters	MAC Address (display only)	DHCP
	IP Address	Subnet mask
	Gateway	DNS address
	DNS Server	Socket port fixed at 2268

Ethernet Configuration

1. Connect a LAN cable from the PC to the Ethernet port on the rear panel.

2. Press the *Menu* key. The Menu setting will appear on the display.

3. Use the scroll wheel to go to item 3, *LAN* and press *Enter*.

4. If the LAN cable is installed correctly a connection is active, the *Connection Status* will show *Online*.

5. To automatically have the network assign an IP address, set DHCP to ON. Otherwise set DHCP to OFF to manually set the Ethernet settings.

DHCP	ON, OFF

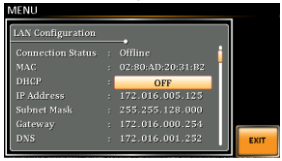
6. If DHCP was set to OFF, configure the remaining LAN parameters.

IP Address
Subnet Mask
Gateway
DNS Server
Socket Port

Note

- Socket Port is fixed to 2268.
- During the configuration, a 3-digit number is always displayed. Once configured, if the hundreds or tens digits are zero, they will Not be shown accordingly.

LAN configuration - 1



LAN configuration - 2

Exit

7. Press *Exit[F4]* to exit from the LAN settings.

USB Remote Interface

USB Configuration	PC side connector	Type A, host
	ASR-3000 side connector	Rear panel Type B, device
	Speed	1.1/2.0 (full speed)
	USB Class	CDC (communications device class)

Steps

1. Connect the Type A-Type B USB cable from the PC to the rear panel USB B port.

2. Press the *Menu* key. The Menu setting will appear on the display.

3. Use the scroll wheel to go to item 4, *USB Device*.

4. If the connection is successful *Connection Status* will change from Offline to Online.

Exit

5. Press *Exit[F4]* to exit from the rear panel USB settings.

USB Remote Control Function Check

Functionality Check

Invoke a terminal application such as Realterm.

ASR-3000 will appear as a COM port on the PC.

To check the COM settings in Windows, see the Device Manager. For example, in Win7 go to the Control panel → System → Hardware tab.

Note

If you are not familiar with using a terminal application to send/receive remote commands via a USB connection, please see page 193 for more information.

Run this query command via the terminal after the instrument has been configured for USB remote control (page 188).

*IDN?

This should return the Manufacturer, Model number, Serial number, and Software version in the following format.

GW-INSTEK, ASR-3XXX, GXXXXXXXX, XX.XX

Manufacturer: GW-INSTEK

Model number : ASR-3XXX

Serial number : GXXXXXXXX

Software version : XX.XX

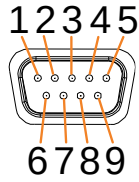
Note

For further details, please see the programming manual, available on the GW Instek web site @ www.gwinstek.com.

RS232 Remote Interface

RS232 Configuration	Connector	BD-9, male
	Parameters	Baud rate, data bits, parity, stop bits.

Pin Assignment



2: RxD (Receive data)

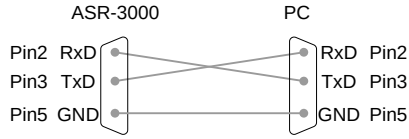
3: TxD (Transmit data)

5: GND

4, 6 ~ 9: No connection

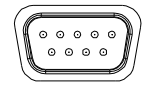
Pin Connection

Use a Null Modem connection (RS232C cable) as shown in the diagram below.



Steps

1. Connect the RS232C cable from the PC to the rear panel RS232 port.



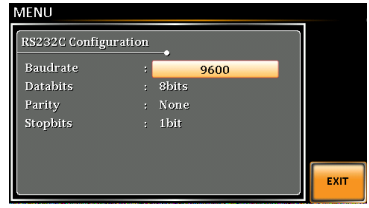
2. Press the *Menu* key. The Menu setting will appear on the display.

3. Use the scroll wheel to go to item 5, *RS232C* and press *Enter*.

4. Set the RS232C relative settings.

Baud rate	1200, 2400, 4800, 9600(default), 19200, 38400, 57600, 115200,
Data bits	7 bits, 8 bits(default)
Parity	None(default), Odd, Even
Stop bits	1 bit(default), 2 bits

RS232C Configuration



Exit

5. Press *Exit[F4]* to exit from the RS232C settings.

Note

The standard accessory does Not include RS232 data cable. Please purchase the additional GTL-232 which will meet your need for RS232 connection.

RS232 Remote Control Function Check

Functionality Check	Invoke a terminal application such as Realterm. For RS232, set the COM port, baud rate, stop bit, data bit and parity accordingly. To check the COM settings in Windows, see the Device Manager. For example, in Win7 go to the Control panel → System → Hardware tab.
⚠ Note	If you are not familiar with using a terminal application to send/receive remote commands from the serial port, please see page 193 for more information.
	Run this query command via the terminal after the instrument has been configured for RS232 remote control (page 190). *IDN? This should return the Manufacturer, Model number, Serial number, and Software version in the following format. GW-INSTEK, ASR-3XXX, GXXXXXXXX, XX.XX Manufacturer: GW-INSTEK Model number : ASR-3XXX Serial number : GXXXXXXXX Software version : XX.XX
⚠ Note	For further details, please see the programming manual, available on the GW Instek web site @ www.gwinstek.com.

Using Realterm to Establish a Remote Connection

Background

Realterm is a terminal program that can be used to communicate with a device attached to the serial port of a PC or via an emulated serial port via USB.

The following instructions apply to version 2.0.0.70. Even though Realterm is used as an example to establish a remote connection, any terminal program can be used that has similar functionality.

Note

Realterm can be downloaded on Sourceforge.net free of charge.

For more information please see http://realterm.sourceforge.net/

Operation

1. Download Realterm and install according to the instructions on the Realterm website.

2. Connect the ASR-3000 via USB (page 187) or via RS232 (page 189).

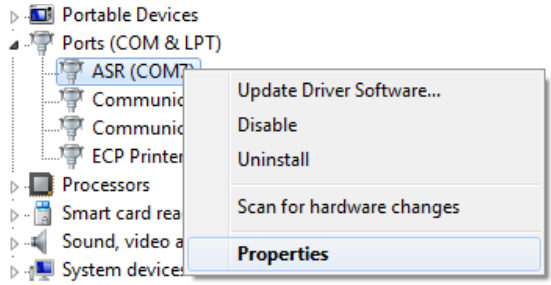
3. If using RS232, make note of the configured baud rate, stop bits and parity.

4. Go to the Windows device manager and find the COM port number for the connection. For example, go to the Start menu > Control Panel > Device Manager.

   Double click the *Ports* icon to reveal the connected serial port devices and the COM port for the each connected device.

   If using USB, the baud rate, stop bit and parity

settings can be viewed by right-clicking the connected device and selecting the *Properties* option.



5. Start Realterm on the PC as an administrator. Click:
   Start menu>All Programs>RealTerm>realterm

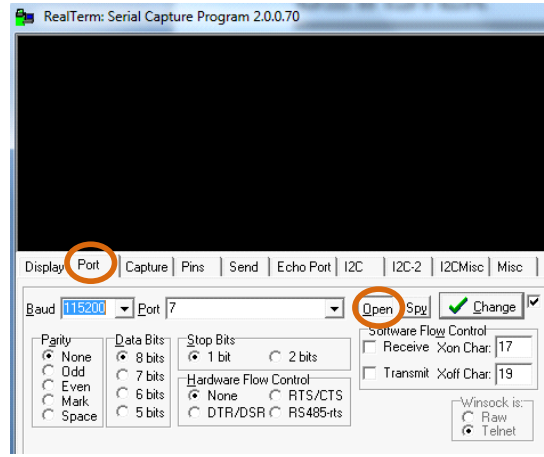
   Tip: to run as an administrator, you can right click the Realterm icon in the Windows Start menu and select the *Run as Administrator* option.

6. After Realterm has started, click on the *Port* tab.

   Enter the *Baud*, *Parity*, *Data bits*, *Stop bits* and *Port* number configuration for the connection.

   The *Hardware Flow Control*, *Software Flow Control* options can be left at the default settings.

   Press *Open* to connect to the ASR-3000.



Note

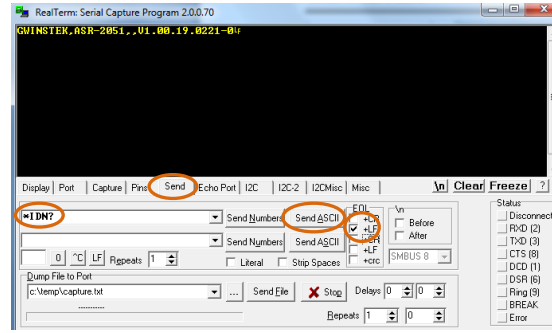
For USB, the baud rate should be fixed to 115,200.

7. Click on the *Send* tab.

   In the *EOL* configuration, check on the *+LF* check boxes.

   Enter the query:
   **idn?*

   Click on *Send ASCII*.



8. The terminal display will return the following:

   GW-INSTEK, ASR-3XXX, GXXXXXXXX, XX.XX (manufacturer, model, serial number, software version)

9. If Realterm fails to connect to the ASR-3000, please check all the cables and settings and try again.

GPIB Remote Interface

GPIB Configuration

1. Connect a GPIB cable from the PC to the GPIB port on the rear panel.

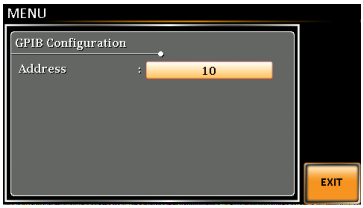
2. Press the *Menu* key. The Menu setting will appear on the display.

3. Use the scroll wheel to go to item 6, *GPIB* and press *Enter*.

4. Set the GPIB address.

GPIB Address	0 ~ 30 (10 by default)

GPIB Configuration



Note Only one GPIB address can be used at a time.

Exit	5. Press *Exit[F4]* to exit from the GPIB settings. 
GPIB Constraints	• Maximum 15 devices altogether, 20m cable length, 2m between each device • Unique address assigned to each device • At least 2/3 of the devices turned On • No loop or parallel connection
Note	The standard accessory does Not include GPIB data cable. Please purchase the additional GTL-248 which will meet your need for GPIB connection.

GPIB Function Check

Functionality Check	Please use the National Instruments Measurement & Automation Controller software to confirm GPIB/LAN functionality. See the National Instrument website, http://www.ni.com for details.
Note	• For further details, please see the programming manual, available on the GW Instek web site @ www.gwinstek.com • Operating System: Windows XP, 7, 8, 10
Operation	1. Start the NI Measurement and Automation Explorer (MAX) program. Using Windows, press: 

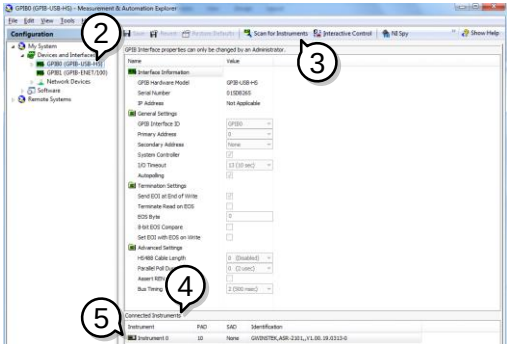
Start>All Programs>NI MAX

2. From the Configuration panel access;
   My System>Devices and Interfaces>GPIB0

3. Press the *Scan for Instruments* button.

4. In the *Connected Instruments* panel the ASR-3000 should be detected as *Instrument 0* with the address the same as that configured on the ASR-3000.

5. Double click the *Instrument 0* icon.



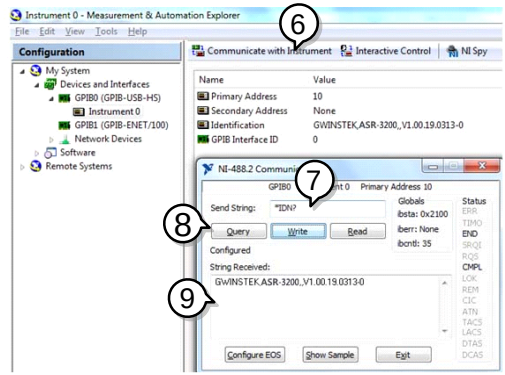
6. Click on *Communicate with Instrument*.

7. Under the Communicator tab, ensure **IDN?* is written in the *Send String* text box.

8. Click on the *Query* button to send the **IDN?* query to the instrument.

9. The instrument identification string will be returned to the buffer area:

   GW-INSTEK, ASR-3XXX, GXXXXXXXX, XX.XX (manufacturer, model, serial number, software version)



10. The function check is complete.

Note

- All product information related to NI-VISA belongs to NATIONAL INSTRUMENTS CORP.
- For using NI-VISA, please link to NATIONAL INSTRUMENTS CORP website to download and install it.
- When using NI-VISA, please be aware of the relevant license terms of NATIONAL INSTRUMENTS CORP.

Web Server Remote Control Function Check

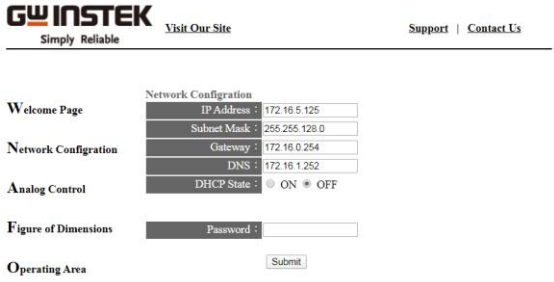
Functionality Check

Enter the IP address of the power supply (for example: http:// XXX.XXX.XXX.XXX) in a web browser after the instrument has been configured for LAN (page 187).

The web interface allows you to:

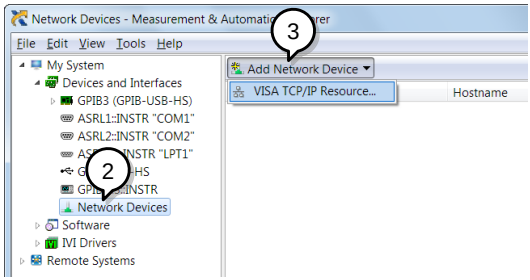
- View the system and information and the network configuration.
- View the analog control pinout.
- View the dimensions of the unit.
- View the operating area

Example:

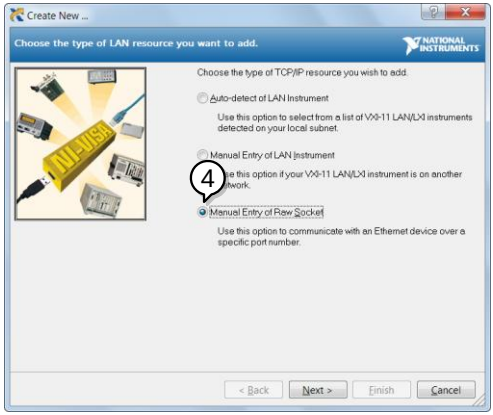


Socket Server Function Check

Background	To test the socket server functionality, National Instruments Measurement and Automation Explorer can be used. This program is available on the NI website, www.ni.com., via a search for the VISA Run-time Engine page, or "downloads" at the following URL, http://www.ni.com/visa/
Requirements	Operating System: Windows XP, 7, 8, 10
Functionality Check	1. Start the NI Measurement and Automation Explorer (MAX) program. Using Windows, press: *Start*>*All Programs*>*NI MAX*  2. From the Configuration panel access; *My System*>*Devices and Interfaces*>*Network Devices* 3. Press *Add New Network Device*>*Visa TCP/IP Resource…*

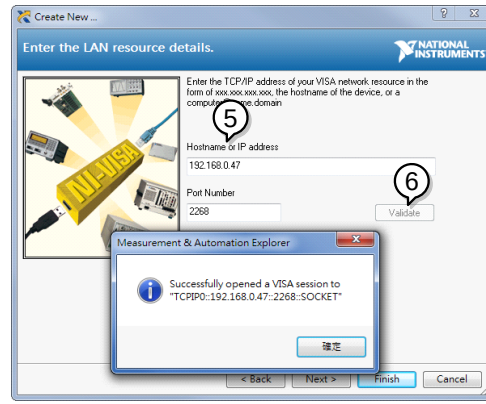


4. Select *Manual Entry of Raw Socket* from the popup window.



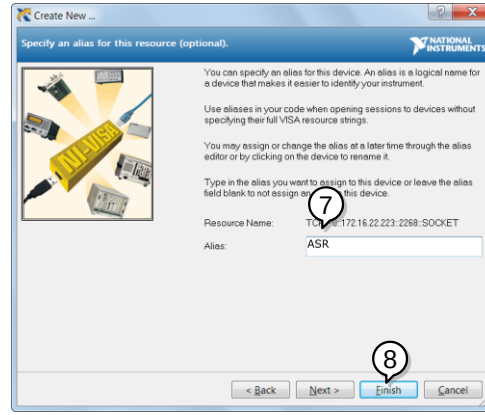
5. Enter the IP address and the port number of the ASR-3000. The port number is fixed at 2268.

6. Double click the Validate button and press *Next*.



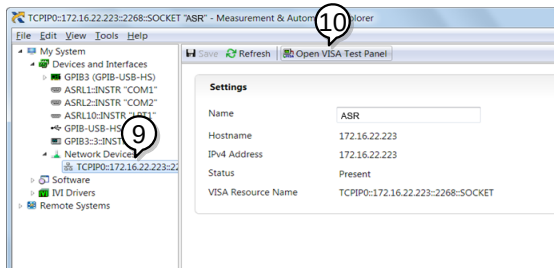
7. Next configure the Alias (name) of the ASR-3000 connection. In this example the Alias is: ASR

8. Click finish.



9. The IP address of the power supply will now appear under Network Devices in the configuration panel. Select this icon now.

10. Press *Open VISA Test Panel.*



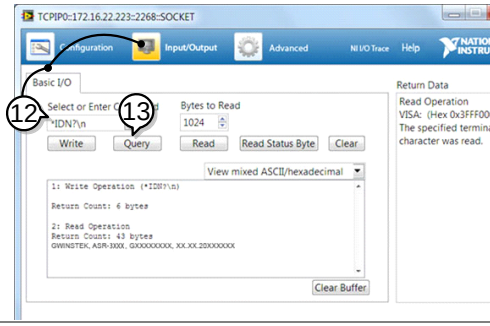
11. Click the *Configuration* Icon. Under the *IO Settings* tab check *Enable Termination Character*. The termination character should be set as *Line Feed -\n*.

12. Click the *Input/Output* icon. Under the *Basic I/O* tab, make sure **IDN?\n* is entered in the *Select or Enter Command* drop box.

13. Click Query.

    The ASR-3000 will return the machine identification string into the buffer area:

    GW-INSTEK, ASR-3XXX, GXXXXXXXX, XX.XX



Note

For further details, please see the programming manual, available on the GW Instek web site @ www.gwinstek.com.

FAQ

- The accuracy does not match the specification.
- How frequently should the power source be calibrated?
- Is it proper to combine 2 or 3 units to reach 1P3W or 3P4W output?

The accuracy does not match the specification.

Make sure the device is powered On for at least 30 minutes, within +18°C~+28°C. This is necessary to stabilize the unit to match the specification.

How frequently should the power source be calibrated?

The ASR-3000 should be calibrated by an authorized service center at least every 2 years.

For details regarding calibration, contact your local dealer or GWInstek.

Is it proper to combine 2 or 3 units to reach the 1P3W or 3P4W output?

ASR-3000 doesn't support 3P4W output function on the basis of 3 units combination. However, it supports 1P3W output type via 2 units combination in series with EXT Mode setup.

For more information, contact your local dealer or GWInstek at www.gwinstek.com / marketing@goodwill.com.tw.

APPENDIX

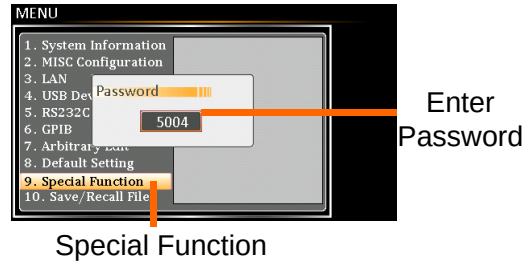
Firmware Update

Background	The ASR series firmware can be upgraded using the USB A port on the front panel. See your local distributor or the GW Instek website for the latest firmware information.
⚠ Note	• Ensure the DUT is not connected. • Ensure the output is off.

Steps

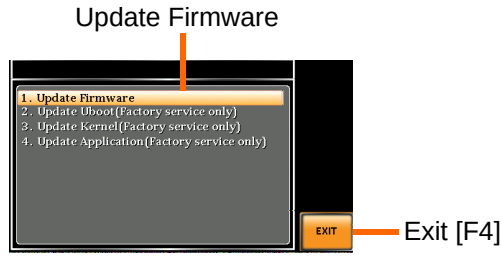
1. Insert a USB Flash Drive into the USB port on front panel of the ASR.
   - The USB drive should include the **gw.sbt & gw.sb3 & gw_asr_kernel.blk** files in a directory name "gw"(USB\gw:).
2. Press the *Menu* key. The Menu setting will appear on the display.

3. Use the scroll wheel to go to item 9, *Special Function* and press *Enter*.



4. Key in the password when prompted and then press *Enter*.
- The password is "5004".

5. Go to Item 1, *Update Firmware* and press *Enter*.



Exit

Press *Exit[F4]* to exit from the Update Firmware settings.

6. Wait for the unit to update. Upon completion the unit will automatically reboot.

7. Repeat the step 1 to 4 and go to "3. Update Kernel (Factory service only)" (ASR-2000 only).

8. Wait for the unit to update. Upon completion the unit will automatically reboot.

9. Load Default Setting.

Factory Default Settings

The following default settings are the factory configuration settings for the ASR-3000 series. For details on how to return to the factory default settings, see page 46.

AC+DC-INT Mode	ASR-3200	ASR-3300	ASR-3400	ASR-3400HF
Range	100V

Error Messages & Messages

The following error messages or messages may appear on the ASR-3000 screen display during varied operations.

Error Messages	Description	Protection type
Over Ipeak+ Current	Positive output current peak value is excessive. Press "Shift + Cancel" to clear this alarm.	Output Off
Over Ipeak- Current	Negative output current peak value is excessive. Press "Shift + Cancel" to clear this alarm.	Output Off
DCAC Power Unit Error	Internal DCAC power unit function error. Press "Shift + Cancel" to clear this alarm. And try to lower the limit values of both IRMS Limit and IPK Limit followed by executing output again. If else continue alarm, contact local distributor.	Output Off
Over Irms Current	Output current RMS value is excessive. Press "Irms" to check allowance set range	Output Off
Power Input Anomaly / System Shutdown	The power input voltage is insufficient or turning off main power switch. Check input power before rebooting the unit.	System Lock
Fan Failure	Fan failure. Contact service center.	System Lock
Output Over-Power	Over internal power stage maximum power (110% of rating power), press "Shift + Cancel" to clear this alarm.	Output Off
Output Short(1)/(2)	Call attention to output terminal short status	Output Off
Output Overvoltage	Over internal maximum voltage (110% of rating voltage). Press "Shift + Cancel" to clear this alarm.	Output Off
Calibration Data Error	The calibration data is abnormal or out of allowance range. Contact service center.	Output Off

DCDC Power Unit Error	Internal DCDC power unit function error. Press "Shift + Cancel" to clear this alarm. If else continue alarm, contact local distributor.	Output Off
PFC Power Unit Error	Internal PFC power unit function error. Press "Shift + Cancel" to clear this alarm. If else continue alarm, contact local distributor.	Output Off
Sensing Voltage Error	Remote sense connection wire is abnormal or over maximum compensation voltage. Press "Shift + Cancel" to clear this alarm.	Output Off
Startup Anomaly	Abnormal startup procedure. Contact service center.	System Lock
External Sync Frequency Error	The external synchronization signal input frequency is out of the allowance range. (40Hz ~ 999.9Hz)	Output Off
SCPI Error	Communication with the SCPI command error	Display Message Only
Power ON Fail	Power ON Function Fail In Error Mode or Range	
IRMS Limit	The RMS current limiter is activated. Press "Irms" to check allowance set range	
IPK Limit	The peak current limiter is activated. Press " Shift + Irms" to check allowance set range	
Remote Sensing Voltage Out of Range	The Sensing voltage limiter is activated.	Display Message Only
System Error (#)	System Error (1~15). Contact service center.	Display Message Only
Power Limit	The Power limiter is activated	
Web Data Error	This message will only be shown when texio update file is used and firmware is selected gw.	
Preset Data Error	Preset data error (data beyond range or data lost)	Display Message Only
ARB Data Error	ARB data error (data lost)	Display Message Only

⚠ Note The system would be locked or output off automatically before the error state is cleared.

Normal Messages	Description	Protection type
Setting Voltage Limited	Setting voltage be limited, press "Shift + V" to check allowance set range	Display Message Only
Setting Frequency Limited	Setting frequency be limited, press "Shift + F" to check allowance set range	Display Message Only
Keys Locked	All of keys are locked, except output key. Long push “Lock” to disable Keys Locked.	Display Message Only
Keys Unlocked	All of keys are unlocked	Display Message Only
Screen Saved to USB:/GWDIMC###.bmp	Screenshot be saved to USB memory successful	Display Message Only
Hardcopy Fail! (Too Many Files in USB)	Hardcopy Fail !, Over 1000 files in USB	Display Message Only

Specifications

The specifications apply when the ASR-3000 is powered on for at least 30 minutes.

Electrical specifications

Model		ASR-3200	ASR-3300	ASR-3400	ASR-3400HF
Input ratings (AC rms)					
Nominal input voltage		200 Vac to 240 Vac			
Input voltage range		180 Vac to 264 Vac			
Phase		Single phase, Two-wire			
Nominal input Frequency		50 Hz to 60 Hz			
Input frequency range		47 Hz to 63 Hz			
Max. power consumption		2500 VA or less	3750 VA or less	5000 VA or less	5000 VA or less
Power factor[*1]	200Vac	0.95 (typ.)			
Max. input current	200Vac	15 A	22.5	30 A	30 A

[*1] For an output voltage of 100 V/200 V (100V / 200V range), maximum current, and a load power factor of 1.

Model		ASR-3200	ASR-3300	ASR-3400	ASR-3400HF
AC mode output ratings (AC rms)					
Voltage	Setting Range[*1]	0.0 V to 200.0 V / 0.0 V to 400.0 V			
	Setting Resolution	0.1 V			
	Accuracy[*2]	±(1 % of set + 1 V / 2 V)			
Output phase		Single phase, Two-wire			
Maximum current[*3]	100 V	20 A	30 A	40 A	40 A
	200 V	10 A	15 A	20 A	20 A
Maximum peak current[*4]	100 V	120 A	180 A	240 A	160 A
	200 V	60 A	90 A	120 A	80 A
Load power factor		0 to 1 (leading phase or lagging phase)			
Power capacity		2000 VA	3000 VA	4000 VA	4000 VA

Frequency	Setting range	AC Mode: 40.00 Hz to 999.9 Hz, AC+DC Mode: 1.00 Hz to 999.9 Hz	AC Mode: 40.0 Hz to 5000 Hz, AC+DC Mode: 1 Hz to 5000 Hz
	Setting resolution	0.01 Hz (1.00 to 99.99 Hz), 0.1 Hz (100.0 to 999.9 Hz)	0.01 Hz (1.00 to 99.99 Hz), 0.1 Hz (100.0 to 999.9 Hz), 1 Hz (1000 to 5000 Hz)
	Accuracy	0.02% of set (23 °C ± 5 °C)	
	Stability[*5]	± 0.005%	
Output on/off phase		0° to 359° variable (setting resolution 1°)	
DC offset[*6]		Within ± 20 mV (TYP)	

*1 100 V / 200 V range

*2 For an output voltage of 20 V to 200 V / 40 V to 400 V, an output frequency of 45 Hz to 65 Hz, no load, and 23°C ± 5°C

*3 For an output voltage of 1 V to 100 V / 2 V to 200 V. Limited by the power capacity when the output voltage is 100 V to 200 V / 200 V to 400 V. If there is the DC superimposition, the current of AC+DC mode satisfies the maximum current. In the case of lower than 40 Hz, and the power rating temperature, the maximum current will be decrease.

*4 With respect to the capacitor-input rectifying load. Limited by the maximum current.

*5 For 45 Hz to 65 Hz, the rated output voltage, no load and the resistance load for the maximum current, and the operating temperature.

*6 In the case of the AC mode and 23°C ± 5°C.

Model		ASR-3200	ASR-3300	ASR-3400	ASR-3400HF
Output rating for DC mode					
Voltage	Setting Range[*1]	-285 V to +285 V / -570 V to +570 V			
	Setting Resolution	0.1 V			
	Accuracy[*2]	±(1 % of set + 1 V / 2 V)			
Maximum current[*3]	100 V	20 A	30 A	40 A	40 A
	200 V	10 A	15 A	20 A	20 A
Maximum peak current[*4]	100 V	120 A	180 A	240 A	160 A
	200 V	60 A	90 A	120 A	80 A
Power capacity		2000 W	3000 W	4000 W	4000 W

*1 100 V / 200 V range

*2 For an output voltage of -285 V to -28.5 V, +28.5 V to +285 V / -570 V to -57 V, +57 V to +570 V, no load, and 23°C ± 5°C

*3 For an output voltage of 1.4 V to 100 V / 2.8 V to 200 V. Limited by the power capacity when the output voltage is 100 V to 250 V / 200 V to 500 V.

*4 Limited by the maximum current.

Model	ASR-3000
Output voltage stability	
Line regulation[*1]	±0.2% or less
Load regulation[*2]	0.5% or less (0 to 100%, via output terminal)
Ripple noise[*3]	1 Vrms / 2 Vrms (TYP)

*1 Power source input voltage is 200 V, 220 V, or 240 V, no load, rated output.

*2 For an output voltage of 100 V to 200 V / 200 V to 400 V, a load power factor of 1, stepwise change from an output current of 0 A to maximum current (or its reverse), using the output terminal on the rear panel.

*3 For 5 Hz to 1 MHz components in DC mode using the output terminal on the rear panel.

Model	ASR-3200/3300/3400	ASR-3400HF
Output voltage waveform distortion ratio, Output voltage response time, Efficiency		
Total harmonic distortion (THD)[*1]	<0.2 % @50/60 Hz <0.3 % @<500 Hz <0.5 % @500.1 Hz to 999.9 Hz	<0.2 % @50/60 Hz <0.5 % @<500 Hz <1 % @500.1 Hz to 2000 Hz <2 % @2001 Hz to 5000 Hz
Output voltage response time[*2]	100 µs (TYP)	

Efficiency*3	80 % or more

*1 At an output voltage of 50 V to 200 V / 100 V to 400 V, a load power factor of 1, and in AC mode.

*2 For an output voltage of 100 V / 200 V, a load power factor of 1, with respect to stepwise change from an output current of 0 A to the maximum current (or its reverse).

*3 For AC mode, at an output voltage of 100 V / 200 V, maximum current, and load power factor of 1.

Model			ASR-3200	ASR-3300	ASR-3400	ASR-3400HF
Measured value display						
Note: All accuracy of the measurement function is indicated for 23 °C±5 °C.						
Voltage	RMS, AVG value*1	Resolution	0.1 V			
		Accuracy*2	For 45 Hz to 65 Hz and DC: ±(0.5 % of reading + 0.5 V / 1 V) For all other frequencies: ±(0.7 % of reading + 1 V / 2 V)			
	PEAK value	Resolution	0.1 V			
		Accuracy	For 45 Hz to 65 Hz and DC: ±(|2 % of reading| + 1 V / 2 V)			
Current	RMS, AVG value	Resolution	0.01 A			
		Accuracy*3	For 45 Hz to 65 Hz and DC: ±(0.5 % of reading+0.1 A/0.05 A) For all other frequencies: ±(0.7 % of reading+0.2 A/0.1 A)	For 45 Hz to 65 Hz and DC: ±(0.5 % of reading+0.15 A/0.08 A) For all other frequencies: ±(0.7 % of reading+0.3 A/0.15 A)	For 45 Hz to 65 Hz and DC: ±(0.5 % of reading+0.2 A/0.1 A) For all other frequencies: ±(0.7 % of reading+0.4 A/0.2 A)	
	PEAK value	Resolution	0.1 A	0.01 A	0.1 A	
		Accuracy*4	For 45 Hz to 65 Hz and DC: ±(|2 % of reading| + 0.5 A/0.25 A)	For 45 Hz to 65 Hz and DC: ±(|2 % of reading| + 0.8 A/0.4 A)	For 45 Hz to 65 Hz and DC: ±(|2 % of reading| + 1 A/0.5 A)	
Power	Active (W)	Resolution	1 W			

		Accuracy*5	±(2 % of reading +2 W)	±(2 % of reading +3 W)	±(2 % of reading +4 W)
	Apparent (VA)	Resolution	1 VA		
		Accuracy*5*6	±(2 % of reading +2 VA)	±(2 % of reading +3 VA)	±(2 % of reading +4 VA)
	Reactive (VAR)	Resolution	1 VAR		
		Accuracy*5*7	±(2 % of reading +2 VAR)	±(2 % of reading +3 VAR)	±(2 % of reading +4 VAR)
Load power factor		Range	0.000 to 1.000		
		Resolution	0.001		
Load crest factor		Range	0.00 to 50.00		
		Resolution	0.01		
Harmonic voltage Effective value (rms) Percent (%) (AC-INT and 50/60 Hz only)		Range	Up to 100th order of the fundamental wave		
		Full Scale	200 V / 400 V, 100%		
		Resolution	0.1 V, 0.1%		
		Accuracy*8	Up to 20th ±(0.2 % of reading + 0.5 V / 1 V) 21th to 100th ± (0.3 % of reading + 0.5 V / 1 V)		
Harmonic current Effective value (rms) Percent (%) (AC-INT and 50/60 Hz only)		Range	Up to 100th order of the fundamental wave		
		Full Scale	20 A / 10 A, 100%	30 A / 15 A, 100%	40 A / 20 A, 100%
		Resolution	0.01 A / 0,1 A, 0.1%		
		Accuracy*3	Up to 20th ±(1 % of reading+0.4 A/0.2 A) 21th to 100th ±(1.5 % of reading+0.4 A/0.2 A)	Up to 20th ±(1 % of reading+0.6 A/0.3 A) 21th to 100th ±(1.5 % of reading+0.6 A/0.3 A)	Up to 20th ±(1 % of reading+0.8 A/0.4 A) 21th to 100th ±(1.5 % of reading+0.8 A/0.4 A)

*1 The voltage display is set to RMS in AC/AC+DC mode and AVG in DC mode.

*2 AC mode: For an output voltage of 20 V to 200 V / 40 V to 400 V and 23 °C ± 5 °C. DC mode: For an output voltage of 28.5 V to 285 V / 57 V to 570 V and 23 °C ± 5 °C.

*3 An output current in the range of 5 % to 100 % of the maximum current, and 23 °C ± 5 °C.

*4 An output current in the range of 5 % to 100 % of the maximum peak current in AC mode, an output current in the range of 5 % to 100 % of the maximum instantaneous current in DC mode, and 23 °C ± 5 °C. The accuracy of the peak value is for a waveform of DC or sine wave

*5 For an output voltage of 50 V or greater, an output current in the range of 10 % to 100 % of the maximum current, DC or an output frequency of 45 Hz to 65 Hz, and 23 °C ± 5 °C.

*6 The apparent and reactive powers are not displayed in the DC mode.

*7 The reactive power is for the load with the power factor 0.5 or lower.

*8 An output voltage in the range of 20 V to 200 V / 40 V to 400 V and 23 °C ± 5 °C.

Model		ASR-3000
Others		
Protections		UVP, OCP, OTP, OPP, Fan Fail
Display		TFT-LCD, 4.3 inch
Memory Function		Store and recall settings, Basic settings: 10 (0~9 numeric keys)
Arbitrary Wave	Number of memories	16 (nonvolatile)
	Waveform length	4096 words

Note

- Product specifications are subject to change without notice.
- The spec aforementioned applies to when slew rate mode is the Time mode.

General Specifications

Model			ASR-3000
Interface	Standard	USB	Type A: Host, Type B: Device, Speed: 1.1/2.0, USB-CDC
		LAN	MAC Address, DNS IP Address, User Password, Gateway IP Address, Instrument IP Address, Subnet Mask
		RS232C	Complies with the EIA-RS232 specifications
		EXT Control	External Signal Input External Control I/O
		GPIB	SCPI-1993, IEEE 488.2 compliant interface
Insulation resistance	Between input and chassis, output and chassis, input and output		500 Vdc, 30 MΩor more
Withstand voltage	Between input and chassis, output and chassis, input and output		1500 Vac, 1 minute
EMC			EN 61326-1 EN 61326-2-1 EN 61000-3-2 EN 61000-3-3 EN 61000-3-11 EN 61000-3-12 EN 61000-4-2/-4-3/-4-4/-4-5/-4-6/-4-8/-4-11/-4-34 EN 55011 (Class A) EN 55032
Safety			EN 61010-1
Environment	Operating environment		Indoor use, Overvoltage Category II
	Operating temperature range		0 °C to 40 °C
	Storage temperature range		-10 °C to 70 °C
	Operating humidity range		20 % RH to 80 % RH (no condensation)
	Storage humidity range		90 % RH or less (no condensation)
	Altitude		Up to 2000 m
Transportation Integrity			ISTA 2A Test Procedure
Dimensions (mm)			430(W)×176(H)×530(D) (not including protrusions)

Weight		Approx. 25 kg
Accessories	Safety information	1 copy
	CO-ROM	1 disc
	Input/Ouput Cover	1 set
	EIA Rack Mount	1 set
	USB Cable	1 piece

External Signal Input (AC+DC-EXT, AC-EXT Mode)

	Specification	Factory Default
Gain setting range	100 V range: 0.0 to 285.0 times	100
	200 V range: 0.0 to 570.0 times	200
Input terminal	BNC connector	
Input impedance	1 MΩ	
Input voltage range	±2.5 V (A/D resolution 12 bit)	
Nondestructive maximum input voltage	±10 V	
Gain resolution	0.1 times	
Accuracy	±5 % (DC, or 45Hz ~ 65 Hz, gain is at initial value, with rate voltage output, no load)	

EXT: Output voltage (V) = External signal input (V) x Gain (V/V)

Voltage Setting Signal Input (AC-VCA Mode)

	Specification	Factory Default
Gain setting range	100 V range: 0.0 to 250.0 times	100
	200 V range: 0.0 to 500.0 times	200
Input terminal	BNC connector	
Input impedance	1 MΩ	
Input voltage range	DC 0 ~ 2.5 V	
Nondestructive maximum input voltage	±10 V	
Accuracy	±5 %	

External Signal Input (AC+DC-ADD, AC-ADD Mode)

	Specification	Factory Default
Gain setting range	100 V range: 0.0 to 285.0 times	100
	200 V range: 0.0 to 570.0 times	200
Input terminal	BNC connector	
Input impedance	1 MΩ	
Input voltage range	±2.5 V (A/D resolution 12 bit)	
Nondestructive maximum input voltage	±10 V	
Input frequency range	DC to 999.9 Hz (sine wave) DC to 100 Hz (other than sine wave)	
Gain resolution	0.1 times	
Accuracy	±5 % (DC, or 45Hz ~ 65 Hz, gain is at initial value, with rate voltage output, no load)	

ADD: Output voltage (V) = External signal input (V) x Gain (V/V) + Internal signal source setting (V)

External Synchronous Signal or Line (AC+DC-SYNC, AC-SYNC)

	Specification	Factory Default
Synchronization signal source	External synchronization signal (EXT) or Power input (LINE)	LINE
Synchronization frequency range	40.00 Hz to 999.9 Hz	
Input terminal	BNC connector	
Input impedance	1 MΩ	
Threshold of input voltage	TTL level	
Minimum pulse width	500 µs	
Nondestructive maximum input voltage	±10 V	
Resolution	0.1 Hz	
Accuracy	±0.2 Hz	

Information of Name Order

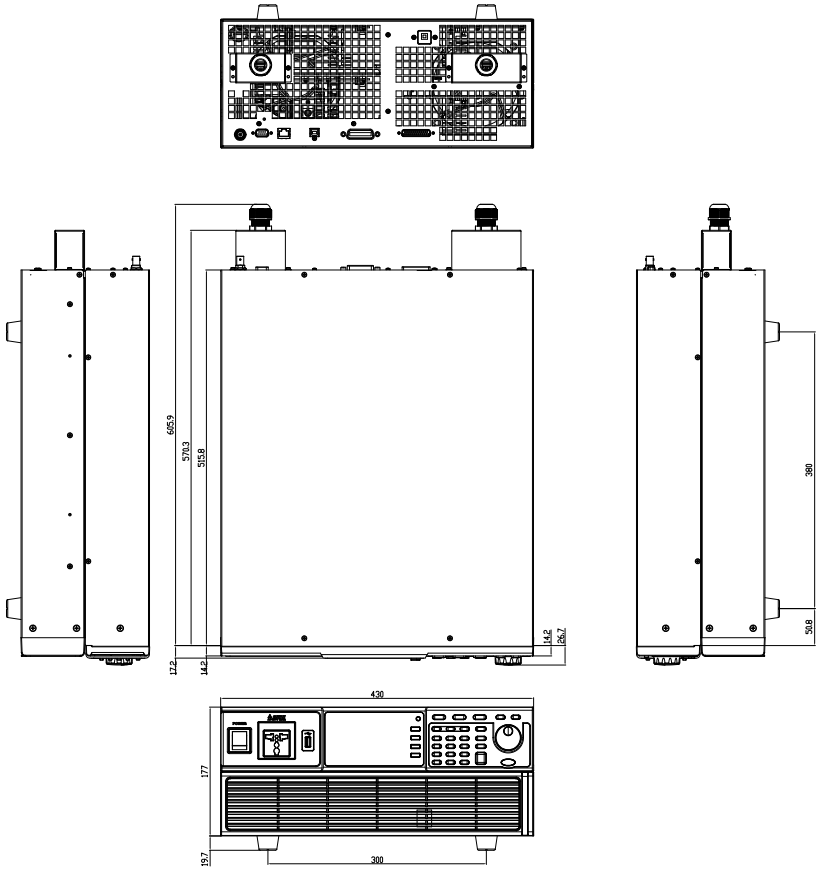
The name order of ASR-3000 series has its rules in definition for each character by order. Refer to the following contents for details.

Background	The definitions below describe the meanings behind each group of alphanumeric characters, in varied colors, of naming code for ASR series models.	
Naming Definition	**ASR**	Switching Mode AC Power Source
	3	Series Name
	XX	Output Capacity **20**: 2000VA **30**: 3000VA **40**: 4000VA
	0	Fixed number
	HF	5000 Hz Output Frequency Version
Lineup of ASR Series Models	**ASR-3200** **ASR-3300** **ASR-3400** **ASR-3400HF**	

ASR-3000 Dimensions

ASR-3200/3300/3400/3400HF

Scale = mm



Declaration of Conformity

We

GOOD WILL INSTRUMENT CO., LTD.

declare that the below mentioned product

Type of Product: Programmable AC/DC Power Source
Model Number: ASR-3200, ASR-3300, ASR-3400, ASR-3400HF
satisfies all the technical relations application to the product within the scope of council:
Directive: 2014/30/EU; 2014/35/EU; 2015/863/EU; 2012/19/EU
The above product is in conformity with the following standards or other normative documents:

◎ **EMC**

EN 61326-1 : EN 61326-2-1:	Electrical equipment for measurement, control and laboratory use — EMC requirements (2013)

Maintenance & Regular Inspection

Background	The potential malfunctions and faults may occur on ASR-3000 due to scores of reasons like humidity, temperature, dust, vibration as well as aging and wear of components. Consequently, to conduct regular maintenance and inspection on ASR-3000 is highly suggested on daily basis.
⚠ Note	The maintenance and inspection can only be performed by qualified and authorized technician or personnel.

Regular Inspection

Background	To achieve a systematically regular inspection, the daily operating data, parameter-relevant records, among other critical information should be well taken down for the establishment of thorough application files for ASR-3000.

Object	Item	Method
Operating Environment Inspection	Temperature & Humidity	Use both thermometer and hygrometer to check if ambient temperature is lower than 40°C and if the requirement of humidity is well met at all times.
	Moisture, Dust & Leak	Observe and make sure no dust bunnies, nor water leak traces and condensation occur.
	Gas Leak	To sniff if there is any abnormal odor or color existed.

Equipment	Vibration	Check if the equipment is operating stably and free from any vibration.
	Heating & Cooling	From the wind hole check if the fan runs adequately and make sure both wind speed and wind volume are in normal status.
	Noise	Ensure that no abnormal noise does happen.

Maintenance

Calibration	Before shipping, we confirm that the proper calibration procedure was implemented in each unit. Nevertheless, in order to maintain the highest performance, we strongly suggest that the periodic calibration is necessary. Contact your dealer or local distributor for calibration.
Cleaning	Gently wipe the unit by a soft cloth dipped with neutral diluted detergent when the unit is in need of cleaning. Avoid using volatile chemicals, e.g., benzene, in that some irreversible results may occur as follows. Discolored surface Printed characters erased Clouded display
⚠ Note	Before maintenance jobs, it is imperative to turn Off the power switch and remove the power cord from the unit as possible electric shock, which leads to injury or death, may occur if not doing so.
